

<b>COURSE:</b> EECS 311. <b>TITLE:</b> Electronic Circuits. <b>PREREQUISITES:</b> EECS 215 and EECS 320		<b>ELECTIVE</b>
<b>TEXTBOOK:</b> R. Jaeger and Blalock, <i>Microelectronic Circuit Design</i> , 2 <sup>nd</sup> ed., McGraw-Hill		
<b>CATALOG DESCRIPTION:</b> Circuit models for bipolar junction and field-effect transistors; nonlinear elements; small-signal and piecewise analysis of nonlinear circuits; analysis and design of basic single-stage transistor amplifiers: gain, biasing, and frequency response; digital logic circuits; memory circuits (RAM, ROM). Design projects. Lecture and laboratory.		
<b>COURSE OBJECTIVES:</b>		<b>TOPICS COVERED:</b>
<ol style="list-style-type: none"> <li>To teach students non-idealities (finite input and output resistances, finite gain and bandwidth, input offset voltage and current) in op-amps, and their effects on op-amp performance;</li> <li>To teach students nonlinear circuit elements such as transistors, diodes, and junction capacitors;</li> <li>To teach students analysis techniques (small-signal analysis) for nonlinear circuits and devices;</li> <li>To teach students basic mixed-signal (analog and digital) circuits, such as oscillators and mixers;</li> <li>To teach students how to use basic simulation software for analog circuit analysis and design;</li> <li>To teach students how to design multi-transistor analog amplifiers meeting specifications such as: gain, bandwidth, input and output resistances, linearity and saturation limits.</li> </ol>		<ol style="list-style-type: none"> <li>Nonlinear circuit elements</li> <li>Non-ideal op-amps and circuits</li> <li>Small-signal modeling of nonlinear circuit devices</li> <li>Gain, bandwidth, impedance</li> <li>Transistor amplifier biasing</li> <li>Small-signal analysis of nonlinear analog circuits</li> <li>Piecewise-linear analysis of nonlinear analog circuits</li> <li>Single-transistor amplifiers</li> <li>Multi-transistor amplifiers</li> <li>Mixed-signal analog &amp; digital</li> </ol>
<b>COURSE OUTCOMES [Program Outcomes Addressed]</b>		<b>ASSESSMENT (Course outcomes)</b>
<ol style="list-style-type: none"> <li>Ability to analyze feedback circuits containing non-ideal op-amps; [1,11]</li> <li>Ability to reduce a nonlinear circuit to its small-signal equivalent and analyze it; [1,11,13]</li> <li>Ability to determine the small-signal (hybrid-pi) model of a transistor from its data sheet and lab measurements using oscilloscopes, signal generators, and semiconductor parameter analyzers; [2]</li> <li>Ability to design a digital ring oscillator with a voltage-controllable frequency meeting a given frequency specification; [3,4,5,11]</li> <li>Ability to design and physically implement a transistor amplifier having a stable biasing circuit and meeting given design specifications such as gain, bandwidth, and node impedances. [2,3,4,5,11]</li> </ol>		<ol style="list-style-type: none"> <li>10 problem sets [1,2]</li> <li>5 laboratories [1,2,3]; students work in pairs; written reports</li> <li>2 design projects; students work in teams to meet specs [4,5]</li> <li>3 exams (with design) [1,2,3,4,5]</li> </ol>
<b>PROGRAM OUTCOMES ADDRESSED:</b> 1,2,3,4,5,11	<b>CLASS/LABORATORY SCHEDULE:</b>	
<b>PROFESSIONAL COMPONENT ADDRESSED:</b> 13	<b>LECTURES:</b> 3 per week @ 50 minutes.	
<b>PREPARED BY:</b> Andrew E. Yagle on Nov. 8, 2004	<b>LABORATORY:</b> 5 in 1 <sup>st</sup> half of term; 2 design projects during 2 <sup>nd</sup> half of term.	

**COURSE DESCRIPTION: University of Michigan, College of Engineering, ELECTRICAL ENGINEERING PROGRAM**
