Research in the News

- In 2008, we did a study of vulnerabilities of financial web sites to assess if they were well designed from a security perspective so as to allow security-conscious users to make correct security-relevant decisions (e.g., whether login was going to be secure or not). We found widespread problems. Our study on vulnerabilities in online banking systems (July 2008) was quoted in Barron's, BusinessWeek, NPR, Associated Press, BBC, and many other publications. Several banks, including Chase and LaSalle Bank, changed their web sites for improved security shortly after publication of the work. The research appeared at the Symposium on Usable Security and Privacy.
- In 2016, we did a study of vulnerabilities of a popular software platform for programming Internet of Things environments in homes. We found significant vulnerabilities. The work received a lot of press attention and led to improvements in the SmartThings platform. The research appeared at the IEEE Symposium on Security and Privacy, 2016, and received a Distinguished Practical Paper Award.
