

# Pixel Spreadsheet

## Test Case "User Five" TEAM CM5

### Tester Info

Name: **Eden Quevedo**  
Job Title: **Tester**  
Manager: **Michael Grande**

Date: **4/20/2011**

### Procedure

**Step 1:** Ask user to run program from flash drive.

**Step 2:** Ask user to convert image to spreadsheet.

**Step 3:** Asked user to convert spreadsheet to image and save it.

**Step 4:** Asked user to view image.

### Results

Had problems importing a stock Windows image, but the user had a large png which was imported successfully, successfully converted to a spreadsheet (please note that the spreadsheet was so large that Excel couldn't handle all the rows) but the image was unable to be saved from the spreadsheet. This could be because the spreadsheet was so large or another program error.

### Comments

**Additional Comments about user:** Windows 7 x64, Excel 2007

Name: Alex Hunt

Age: 21

Gender: Male

Status: GT student

Computer experience: Awesome

**Comments from user:**

Needs feedback when doing something. I don't know if it isn't working or if it will eventually work.
