CS 6120/CS4120: Natural Language Processing

Instructor: Prof. Lu Wang College of Computer and Information Science Northeastern University Webpage: www.ccs.neu.edu/home/luwang

Logistics

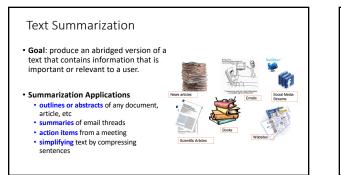

- I have office hour after today's class at 258 WVH, 5:15pm-6:15pm.
- Final exam: 4/25, 8am-10am, 108 WVH (this room!)
 - Open book
 - You can bring in any notes and/or textbooks.
 You can use your computer (e.g. laptops), but no access to Internet.
 - No cell phone! No messenger!
 - · No cen phone: No messenger:
- We will have office hours until 4/24!

Schedule

- Topics to be covered: sentiment analysis, opinion mining, NLP for social media, dialogue systems and chatbots
- April 3: project feedback! 3:25-6:15pm in 258 WVH.
 Will create a thread on piazza
 - Teams that present on April 6 will have priority to pick time slots!
- April 6, 10, 13: 21 projects presentation!

Progress report content (also on Piazza!)

- Deadline extended to 3/26, 11:59pm
- What changes you have made for the task compared to the proposal, including problem/task, models, datasets, or evaluation methods? If there is any change, please explain why.
- Describe data preprocessing process. This includes data cleaning, selection, feature generation or other representation you have used, etc.
 What methods or models you have tried towards the project goal? And why do you
- What methods or models you have tried towards the project goal? And why do you choose the methods (you can including related work on similar task or relevant tasks)?
 What results you have achieved up to now based on your proposed evaluation methods? What is working or Wha
- How can you improve your models? What are the next steps?
- Length: Length: 2 page (or more if necessary). Single space if MS word is used. Or you
 can choose latex templates, e.g. https://www.acm.org/publications/proceedingstemplate or http://icmi.cc/2015/Page_1d=151

- "Summaries as short as 17% of the full text length speed up decision making twice, with no significant degradation in accuracy."
 - Does this document contain information I am interested in? • Is this document worth reading?
- "Query-focused summaries enable users to find more relevant documents more accurately, with less need to consult the full text of the document." [Mani et al., 2002]
- One of our research projects at Northeastern: help quickly diagnose information retrieval (IR) systems -> is the system working as what we want?

Example

• Query: "Cyberattacks by Russian"

Summary for returned doc 1:

- Over the last year, Russian hackers have gone from infiltrating business networks of energy, water and nuclear plants to worming their way into control rooms.
- Summary for returned doc 2: • The UK, US, France and Germany say there is no plausible alternative explanation to Russian responsibility.

What is the output

- Keywords
- Highlighted information in the input
- · Chunks or speech directly from the input or paraphrase and aggregate
- the input in novel ways
- Modality: text, speech, video, graphics

What to summarize? Single vs. multiple documents

• Single-document summarization • Given a single document, produce

- abstract outline
- headline
- Multiple-document summarization • Given a group of documents, produce a gist of the content: • a series of news stories on the same event
 - · a set of web pages about some topic or question

Multi-document summarization

- Very useful for presenting and organizing search results
- Many results are very similar, and grouping closely related documents helps cover more event facets
- · Summarizing similarities and differences between documents

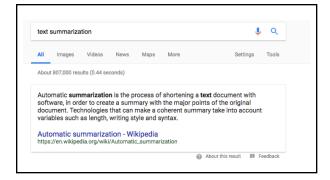

Scientific article summarization

- Not only what the article is about, but also how it relates to work it cites
- Determine which approaches are criticized and which are supported Automatic genre specific summaries are more useful than original paper abstracts

Query-focused Summarization & Generic Summarization

- Generic summarization:
 Summarize the content of a document
- Query-focused summarization:
 - Summarize a document with respect to an information need expressed in a user query.
 - a kind of complex question answering:
 - Answer a question by summarizing a document that has the information to construct the answer

Summarization for Question Answering: Featured Snippets • Create snippets summarizing a web page for a query (could be paragraphs) • **Create snippets summarizing a web page for a query (could** be paragraphs) • **Create snippets summarizing a web page for a query (could** • **Create snippets summarizing a web page for a query (could** • **Create snippets summarizing a web page for a query (could** • **Create snippets summarizing a web page for a query (could** • **Create snippets summarizing a web page for a query (could** • **Create snippets summarizing a web page for a query (could** • **Create snippets snippet**

Summarization for Question Answering: Multiple documents

Create answers to complex questions summarizing multiple documents.

- Instead of giving a snippet for each document
- Create a cohesive answer that combines information from each document

Extractive summarization & Abstractive summarization

• Extractive summarization:

create the summary from phrases or sentences in the source document(s)
Abstractive summarization:

 express the ideas in the source documents using (at least in part) different words

Extractive summarization

Sample article:

The Trump administration accused Russia on Thursday of engineering a series of cyberattacks that targeted American and European nuclear power plants and water and electric systems, and could have sabotaged or shut power plants off at will.

United States officials and private security firms saw the attacks as a signal by Moscow that it could disrupt the West's critical facilities in the event of a conflict.

They said the strikes accelerated in late 2015, at the same time the Russian interference in the American election was underway. The attackers had compromised some operators in North America and Europe by spring 2017, after President Trump was inaugurated.

Extractive summarization

Sample article:

The Trump administration accused Russia on Thursday of engineering a series of cyberattacks that targeted American and European nuclear power plants and water and electric systems, and could have sabotaged or shut power plants off at will.

United States officials and private security firms saw the attacks as a signal by Moscow that it could disrupt the West's critical facilities in the event of a conflict.

They said the strikes accelerated in late 2015, at the same time the Russian interference in the American election was underway. The attackers had compromised some operators in North America and Europe by spring 2017, after President Trump was inaugurated.

Extractive summarization

Sample article:

The Trump administration accused Russia on Thursday of engineering a series of cyberattacks that targeted American and European nuclear power plants and water and electric systems, and could have sabotaged or shut power plants off at will.

United States officials and private security firms saw the attacks as a signal by Moscow that it could disrupt the West's critical facilities in the event of a conflict.

They said the strikes accelerated in late 2015, at the same time the Russian interference in the American election was underway. The attackers had compromised some operators in North America and Europe by spring 2017, after President Trump was inaugurated.

Word statistics

- Cue phrases
- · Section headers (e.g. introduction in scientific articles)
- Sentence position

Abstractive Summarization

- Input: Congratulations to Australia for seeing sense and dropping the ridiculous policy of not selecting their best players if they are playing overseas.
- Summary: Australia have seen sense by revamping their overseas selection policy.

Most current systems

- Use shallow analysis methods Rather than full understanding
- Mostly extractive!---disadvantages? · Work by sentence selection
 - · Identify important sentences and piece them together to form a summary

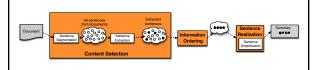

Knowledge-based and Advanced Systems

- Use more sophisticated natural language processing
- Discourse information
- Resolve anaphora, text structure
- Use external lexical resources
 Wordnet, adjective polarity lists, opinion
- wordnet, adjective polarity lists, opi
- Using machine learning models
- Towards abstractive summarization

Summarization: Three Stages content selection: choose sentences to extract from the document information ordering: choose an order to place them in the summary sentence realization: clean up the sentences

Basic Summarization Algorithm

- 1. content selection: choose sentences to extract from the document
- 2. information ordering: just use document order
- 3. sentence realization: keep original sentences

Unsupervised content selection

Frequency as document topic proxy

• Simple intuition, look only at the document(s)

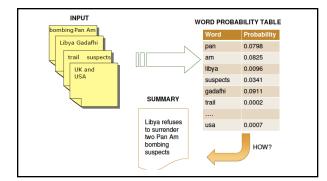

- Words that repeatedly appear in the document are likely to be related to the topic of the document
- Sentences that repeatedly appear in different input documents represent themes in the input
- But what appears in other documents is also helpful in determining the topic

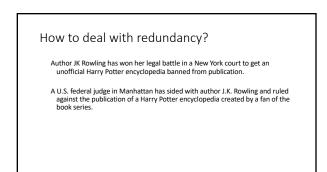

· Background corpus probabilities/weights for word

What is an article about?

Word probability/frequency

- Proposed by Luhn in 1958 [Luhn 1958]
- Frequent content words would be indicative of the topic of the article
 In multi-document summarization, words or facts repeated in the input are more likely to appear in human summaries [Nenkova et al., 2006]

Main steps in sentence selection according to word probabilities

Step 1 Estimate word weights (probabilities) Step 2 Estimate sentence weights $Weight(Sent) = CF(w_i \in Sent)$

Step 3 Choose best sentence

Step 4 Update word weights Step 5 Go to 2 if desired length not reached

 Update word probabilities for the selected sentence to reduce redundancy

 $p^{new}(w) = p^{old}(w).p^{old}(w)$

Repeat until desired summary length

Topic words (topic signatures)

- Which words in the input are most descriptive?
- Instead of assigning probabilities or weights to all words, divide words into two classes: descriptive or not
- For iterative sentence selection approach, the binary distinction is key to the advantage over frequency and ${\rm TF}^{\rm *IDF}$
- Systems based on topic words have proven to be the most successful in official summarization evaluations

 Input for summarization: articles relevant to the following user need

Title: Human Toll of Tropical

Storms Narrative: What has been the human toil in death or injury of tropical storms in recent years? Where and when have each of the storms caused human casualities? What are the approximate total number of casualties attributed to each of the storms?

Topic Words

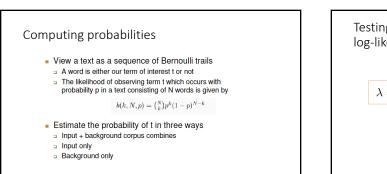

CODIC VIGUES Mande, dilloc, no more, updamena, bargidadeh jhu, caribbara, caribna, caisaad, carimande, dilloc, no more, updamena, bargidadeh jhu, caribbara, caribna, caisaad, caridood, looded, libodel, liboding, Boode, forda, guti, hum, hit, horneless, hornes, hugo, humicane, insurance, insurance, island, islands, Boldy, losses, louisianu, manila, miles, incaragaaa, north, port, pounds, rain, rains, nebuid, rebuiding, nelei, remanst, nesidents, noard, atali, at soms, soms, applies, lourists, baros, topical, typhoor, vigin, visulteres, weather,

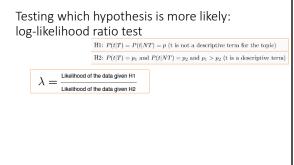

Formalizing the problem of identifying topic words

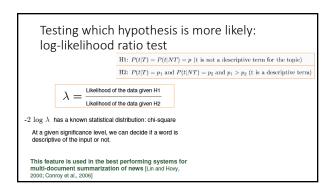

Given

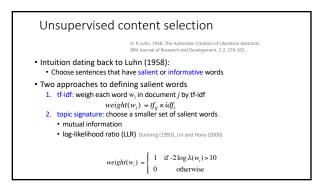

- t: a word that appears in the input
- T: cluster of articles on a given topic (input)
 NT: articles not on topic T (background corpus)
- Decide if t is a topic word or not
- Words that have (almost) the same probability in T and NT are not topic words

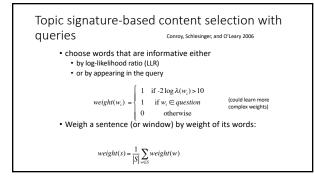

H1: P(t|T) = P(t|NT) = p (t is not a descriptive term for the topic) H2: $P(t|T) = p_1$ and $P(t|NT) = p_2$ and $p_1 > p_2$ (t is a descriptive term)

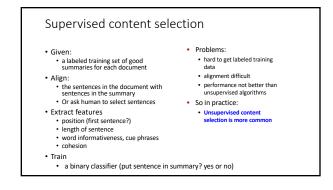

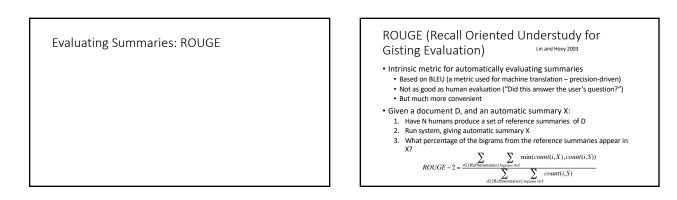

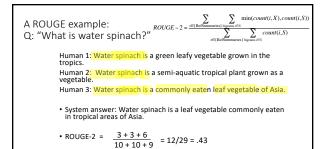

Query-focused Summarization

Or complex question answering

Definition questions

Q: What is water spinach?

A: Water spinach (ipomoea aquatica) is a semiaquatic leafy green plant with long hollow stems and spear- or heart-shaped leaves, widely grown throughout Asia as a leaf vegetable. The leaves and stems are often eaten stir-fried flavored with salt or in soups. Other common names include morning glory vegetable, kangkong (Malay), rau muong (Viet.), ong choi (Cant.), and kong xin cai (Mand.). It is not related to spinach, but is closely related to sweet potato and convolvulus.

Medical questions

Q: In children with an acute febrile illness, what is the efficacy of single medication therapy with acetaminophen or ibuprofen in reducing fever? A: lbuprofen provided greater temperature decrement and longer duration of antipyresis than acetaminophen when the two drugs were administered in approximately equal doses. (*PubMedID: 1621668, Evidence Strength: A*)

Demner-Fushman and Lin (2007)

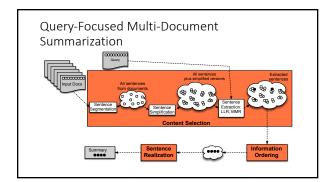

Other complex questions

- 1. How is compost made and used for gardening (including different types of compost, their uses, origins and benefits)?
- 2. What causes train wrecks and what can be done to prevent them?
- 3. Where have poachers endangered wildlife, what wildlife has been endangered and what steps have been taken to prevent poaching?
- 4. What has been the human toll in death or injury of tropical storms in recent years?

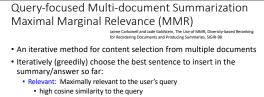

Answering harder questions: Query-focused multi-document summarization

• The (bottom-up) snippet method

- Find a set of relevant documents
- Extract informative sentences from the documents
- Order and modify the sentences into an answer
- The (top-down) information extraction method • build specific answerers for different question types:
 - definition questions
 - biography questions
 - certain medical questions

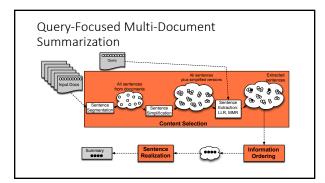

Simplifying sente	DCES 2007), Conroy et al. (2006), Vanderwende et al. (2007)
	sentences, use rules to decide which modifiers to prune a wide variety of machine-learning methods)
appositives	Rajam, 28, an artist who was living at the time in Philadelphia , found the inspiration in the back of city magazines.
attribution clauses	Rebels agreed to talks with government officials, international observers said Tuesday.
PPs without named entities	The commercial fishing restrictions in Washington will not be lifted unless the salmon population increases [PP to a sustainable numbe r]
initial adverbials	"For example", "On the other hand", "As a matter of fact", "At this point"

- Novel: Minimally redundant with the summary/answer so far
- low cosine similarity to the summary
- $\hat{s}_{_{MMR}} = \max\nolimits_{s \in D} \lambda sim(s,Q) \ \ (1{\text{-}}\lambda) \max\nolimits_{s \in S} sim(s,S)$
- · Stop when desired length

LLR+MMR: Choosing informative yet non-redundant sentences

- One of many ways to combine the intuitions of LLR and MMR:
- 1. Score each sentence based on LLR (including query words)
- 2. Include the sentence with highest score in the summary.
- 3. Iteratively add into the summary high-scoring sentences that are not redundant with summary so far.

Information Ordering

Chronological ordering:

 Order sentences by the date of the document (for summarizing news) (Barzilay, Elhadad, and McKeown 2002)

Coherence:

 Choose orderings that make neighboring sentences similar (by cosine). Choose orderings in which neighboring sentences discuss the same entity (Barzilay and Lapata 2007)

• Topical ordering • Learn the ordering of topics in the source documents

Automatic summary edits

 Some expressions might not be appropriate in the new context References:

- he
 Putin
 Russian Prime Minister Vladimir Putin
 Discourse connectives
- However, moreover, subsequently

• Requires more sophisticated NLP techniques

Before

Pinochet was placed under arrest in London Friday by British police acting on a warrant issued by a Spanish judge. Photchet has immunity from procecution in Chile as a senator-for-life under a new constitution that his government crafted. Pinochet was detained in the London clinic while recovering from back surgery.

After

Gen. Augusto Pinochet, the former Chilean dictator, was placed under arrest in London Friday by British police acting on a warrant issued by a Spanish judge. Pinochet has immunity from prosecution in Chile as a senator-for-life under a new constitution that his government crafted. Pinochet was detained in the London clinic while recovering from back surgery.
