0.1	Preface	13
0.2	Acknowledgements	13
0.3	Related Books	14
0.4	Review Papers	14
0.5	Overview	14
1	Image Restoration	1
1.1	Introduction (s,res,intro)	1
1.2	Conventional discrete measurement model	1
1.3	Continuous-discrete model (s,res,cd)	2
1.3.1	Minimum norm estimate	3
1.3.2	Band-limited objects	3
1.4	Matrix-vector representation (s,res,mat1)	4
1.4.1	1D matrix-vector representations	4
1.4.2	Circulant approximations	6
1.4.3	Circulant analysis of convolution problems	6
1.4.4	2D matrix-vector representation (s,res,mat2)	7
1.4.5	2D circular convolution	8
1.5	Simple restoration methods (s,res,inv)	8
1.5.1	The deconvolution solution	9
1.5.2	The matrix inverse solution	9
1.6	Noise models (s,res,noise)	9
1.6.1	Additive Gaussian noise	9
1.6.2	Poisson measurements	10
1.6.3	Poisson+Gaussian measurements	10
1.7	Statistical image restoration (s,res,stat)	10
1.7.1	Maximum-likelihood estimation	11
1.7.2	Bayesian estimation	11
1.7.3	Bayesian estimation in linear Gaussian models (s,res,stat,gauss)	12
1.7.3.1	MAP estimator	12
1.7.3.2	MMSE estimator	14
1.7.3.3	White Gaussian case	14
1.7.3.4	Circulant analysis of white Gaussian case	14
1.8	Penalized-likelihood estimation (s,res,stat,pl)	15
1.8.1	1D 1st-order roughness penalty	16
1.8.2	Linear Gaussian case	16
1.8.3	Circulant Analysis	17
1.8.4	Discussion	18
1.9	Mean and variance analysis (s,res,pl,mav1)	19
1.10	Roughness penalties in 2D (s,res,penal2)	20
1.10.1	Nonquadratic regularization	20
1.10.2	Rotation invariance	21
1.11	Minimization algorithms (s,res,alg.tex)	22

1.12	Restoration Example (s,res,ex1)	23
1.13	Analysis of least-squares with nonquadratic regularization (s,res,nppls)	23
1.14	Bayesian line-site models (s,res,line)	28
1.15	Summary (s,res,summ)	29
1.16	Exercises (s,res,prob)	30
2	Analytical Tomographic Image Reconstruction	1
2.1	Introduction (s,tomo,intro)	1
2.2	Radon transform in 2D (s,tomo,radon)	2
2.2.1	Definition	2
2.2.2	Radon transform properties (s,tomo,radon,prop)	4
2.2.3	Sinogram	5
2.2.4	Fourier-slice theorem	6
2.3	Backprojection (s,tomo,back)	7
2.3.1	Image-domain analysis	8
2.3.2	Frequency-domain analysis	8
2.4	Radon transform inversion (s,tomo,iradon)	9
2.4.1	Direct Fourier reconstruction	10
2.4.2	The backproject-filter (BPF) method (s,tomo,bpf)	11
2.4.3	The filter-backproject (FBP) method (s,tomo,fbp)	11
2.4.4	The convolve-backproject (CBP) method	12
2.4.5	Filtered versus unfiltered backprojection	13
2.4.6	PSF of the FBP method (s,tomo,fbp,psf)	13
2.4.7	Summary	14
2.5	Operator formulation (s,tomo,hilbert)	15
2.5.1	Forward projection	15
2.5.2	Back projection: the adjoint of \mathcal{P}	15
2.6	System blur, sampling, and noise (s,tomo,blur)	18
2.6.1	WLS estimator	18
2.6.2	Regularization	19
2.6.3	QPWLS analytical reconstruction	20
2.6.4	Spatial resolution properties (s,tomo,blur,prop)	20
2.6.5	Noise properties	21
2.6.6	Optimization of angular weighting	22
2.6.7	Resolution-noise tradeoffs	22
2.6.8	Isotropic spatial resolution	22
2.7	Practical issues (s,tomo,prac)	24
2.7.1	Backprojection	24
2.7.1.1	Rotation-based backprojection	24
2.7.1.2	Ray-driven backprojection	25
2.7.1.3	Pixel-driven backprojection	25
2.7.1.4	Summary	26
2.7.2	BPF implementation	26
2.7.3	FBP implementation	26
2.7.4	Direct Fourier reconstruction	26
2.8	Reconstruction from FT samples (s,tomo,mri)	26
2.9	Notes (s,tomo,note)	26
2.10	Sinogram restoration (s,tomo,restore)	27
2.11	Summary (s,tomo,summ)	27
2.12	Problems (s,tomo,prob)	27
3	Magnetic Resonance Imaging	1
3.1	Introduction	1

4 Emission Imaging	1
4.1 Introduction (s,emis,intro)	1
4.2 Emission Process (s,emis,proc)	4
4.2.1 Radiotracer Spatial Distribution	4
4.2.2 The density estimation problem (s,emis,dens)	5
4.2.3 Direct density estimation methods	5
4.2.4 Poisson N (s,emis,poisN)	8
4.2.5 Poisson spatial point processes	8
4.3 Radioactive Decay Statistics (s,emis,decay)	10
4.3.1 Statistics of an Ideal Counting Process	11
4.3.2 Half-life	13
4.3.3 Poisson Approximation	13
4.3.4 Estimating source activity	13
4.4 Idealized Detector Units (s,emis,detect)	14
4.4.0.1 Statistics of Ideal Detector Units	14
4.5 Photon/Detector Interaction: Planar Detector (s,emis,plane,cauchy)	18
4.6 Photon/Detector Interaction: General Detector (s,emis,photon,general)	20
4.7 Problems (s,emis,prob)	21
4.8 todo (s,emis,todo)	21
5 Basis	1
5.1 Basis Introduction	1
5.1.1 parametric surfaces for binary objects	1
5.2 Forward and backprojection choices	3
5.3 System matrix choices	3
6 Optimization by General-Purpose Methods	1
6.1 Introduction (s,opt,intro)	2
6.1.1 Iterative optimization methods	2
6.1.2 The Hessian	3
6.1.3 Why so many algorithms?	3
6.1.4 Monotonicity (s,opt,mono)	3
* General-purpose unconstrained optimization methods	4
6.2 Fixed-point iterations (s,opt,fixed)	4
6.3 Preconditioned gradient descent (PGD) algorithms (s,opt,pgd)	4
6.3.1 Monotonicity conditions for PGD	4
6.3.2 Local convergence rate (s,opt,pgd,rate)	6
6.3.3 Step-halving or backtracking (s,opt,pgd,half)	6
6.3.4 Ideal preconditioner (s,opt,precon)	7
6.4 Newton-Raphson algorithm	7
6.5 Preconditioned steepest descent (PSD) algorithms (s,opt,psd)	7
6.5.1 Asymptotic convergence rate	8
6.6 Preconditioned conjugate gradients (PCG) (s,opt,pcg)	9
6.6.1 Asymptotic convergence rate	11
6.7 Quasi-Newton methods (s,opt,qn)	11
6.7.1 Implementation	12
* General-purpose constrained optimization methods	14
6.8 Gradient projection method (s,opt,gp)	14
6.8.1 Limitations to preconditioning	16
6.9 Newton's method (s,opt,con,nr)	16
6.10 Conjugate gradient method (s,opt,con,cg)	17
6.11 Coordinate descent methods (s,opt,cd)	17
6.11.1 Coordinate-descent Newton (CD-NR)-Raphson	18
6.11.2 Asymptotic convergence rate of CD	18

* Special-purpose optimization methods	19
6.12 Projection onto convex sets (POCS) (s,opt,pocs)	19
6.13 ART2 (s,opt,art2)	20
6.14 Annealing methods (s,opt,anneal)	21
6.14.1 Simulated annealing	21
6.14.2 Deterministic annealing and graduated nonconvexity	21
6.14.3 Other global optimization methods	21
6.15 Notes (s,opt,note)	21
7 Optimization Transfer Methods	1
7.1 Introduction (s,ox)	2
7.1.1 Optimization transfer principle	2
7.1.2 Monotonicity	2
7.1.3 Asymptotic convergence rate (s,ox,rate)	4
7.2 Surrogate design for general <i>cost functions</i> (s,ox,design)	5
7.2.1 Surrogates for twice-differentiable <i>cost functions</i> (s,ox,design2)	5
7.2.1.1 Convex surrogates	5
7.2.1.2 Huber's algorithm for quadratic surrogates (s,ox,huber)	6
7.2.2 Surrogates for once-differentiable <i>cost functions</i> (s,ox,design1)	6
7.2.2.1 Gradient-based surrogates	7
7.2.2.2 Paraboloidal surrogates	7
7.2.3 Separable surrogates for convex <i>cost functions</i> (s,ox,design0)	7
7.2.3.1 Separable surrogates for additive updates	7
7.2.3.2 Separable surrogates for multiplicative updates	9
7.3 Surrogate design for image reconstruction <i>cost functions</i> (s,ox,recon)	10
7.3.1 Convex surrogates	10
7.3.2 Derivative-based surrogate	11
7.3.3 Parabola surrogates (s,ox,recon,parab)	11
7.3.3.1 Optimal curvature	11
7.3.3.2 Maximum curvature	11
7.3.3.3 Derivative-based curvatures (s,ox,recon,deriv)	12
7.3.4 Huber's curvatures (s,ox,recon,huber)	13
7.3.5 Separable paraboloidal surrogates (s,ox,sps)	16
7.4 Misc.	20
7.4.1 Grouped coordinate algorithms (s,ox,group)	20
7.4.1.1 Direct minimization	20
7.4.1.2 Surrogate minimization	21
7.4.2 Monotonic line searches (s,ox,line)	21
7.5 Incremental gradient or ordered subset methods (s,ox,os)	22
* Special-purpose methods	25
7.6 Alternating-minimization procedure (s,ox,amp)	25
7.6.1 Relationship to optimization transfer	26
7.7 Expectation-maximization (EM) methods (s,ox,em)	27
7.7.1 Algorithm	28
7.7.2 Monotonicity (s,ox,em,mono)	28
7.7.3 Generalized EM (GEM) methods	29
7.7.4 Asymptotic convergence Rate (s,ox,em,rate)	30
7.7.5 Example application with missing data (s,ox,em,ex)	30
7.7.6 Generalizations (s,ox,em,more)	31
7.8 Space-alternating generalized EM (SAGE) methods (s,ox,sage)	33
7.8.1 Problem	33
7.8.2 Hidden-data space	34
7.8.3 Algorithm	34
7.8.4 Choosing index sets	35

7.8.5	Convergence rate	36
7.9	Notes (s,ox,note)	36
7.10	Problems (s,ox,prob)	36
8	Convergence Analysis	1
8.1	Introduction	1
8.2	Monotonicity	1
8.3	Basic monotonicity results	1
8.4	Meyer's monotonicity theorem	3
8.5	Convergence proof for optimization transfer methods	5
8.6	Convergence proof for relaxed ordered subsets methods	10
8.7	Notes	10
9	Least-Squares Image Reconstruction	1
9.1	Introduction	1
9.1.1	Motivations for quadratic <i>cost functions</i>	1
9.1.1.1	Linear gaussian model and maximum likelihood	1
9.1.1.2	Quadratic approximation to log-likelihood	2
9.1.1.3	Quadratic surrogate function for log-likelihood	3
9.1.1.4	Variance-weighted least-squares, or χ^2	3
9.1.2	General quadratic <i>cost function</i>	3
9.1.3	Quadratic regularization	4
9.2	Existence of a minimum and uniqueness of minimizers	5
9.2.1	Existence of a minimum	5
9.2.2	General quadratic <i>cost function</i> revisited	6
9.2.3	Uniqueness of minimizer	7
9.2.4	Nonzero diagonals	7
★	Unconstrained minimization	8
9.3	SVD based approaches	8
9.4	Iterative minimization methods	8
9.5	Preconditioned gradient descent (WLS-PGD) algorithms	9
9.5.1	Convergence of PGD	10
9.5.2	Relaxation	13
9.5.3	Asymptotic convergence rate of PGD	14
9.5.4	Comparing preconditioners for PGD	15
9.5.5	Monotone convergence of PGD	16
9.5.6	PGD is a contraction	17
9.5.7	PGD converges monotonically in a norm	17
9.5.8	Scaled identity preconditioner for PGD (Richardson)	18
9.5.9	Diagonal preconditioners for PGD (Jacobi, JOR, etc.)	19
9.5.9.1	Optimal diagonal preconditioner	20
9.5.9.2	Banded preconditioner	21
9.5.9.3	Computation	21
9.6	Other parallelizable algorithms	21
9.6.1	Preconditioned steepest descent (PSD)	21
9.6.2	Preconditioned conjugate gradients (WLS-PCG)	22
9.6.3	Expectation-maximization (WLS-EM) algorithm	23
9.6.3.1	Convergence	25
9.6.3.2	Fully parallelizable case	25
9.6.3.3	Figueiredo and Nowak's complete data	26
9.6.4	Alternating-minimization procedure	27
9.6.5	Separable paraboloidal surrogates (WLS-SPS) algorithm	28
9.6.5.1	Convergence	30
9.6.5.2	Selection of π_{ij} 's	30

9.6.5.3	Alternate derivation	32
9.6.6	Ordered subsets (WLS-OS) algorithm	32
9.6.7	Quasi-Newton (WLS-QN) algorithm	33
9.7	Sequential algorithms	33
9.7.1	Gauss Siedel (WLS-GS) algorithm	33
9.7.2	Coordinate descent (WLS-CD) algorithm	34
9.7.3	Convergence of WLS-GS and WLS-CD	35
9.7.4	Convergence rate of WLS-CD vs WLS-SPS	36
9.8	Partially parallelizable algorithms	38
9.8.1	Pixel partitions	38
9.8.2	Block-coordinate descent (WLS-BCD) algorithm	38
9.8.3	Parallelizable coordinate descent (WLS-PCD)	39
9.8.4	Grouped simultaneous descent (WLS-PSD)	40
9.8.5	Variations	40
9.9	What else?	40
9.9.1	Conjugate Gradients	40
9.9.2	ART	40
9.9.3	Double search	40
* Nonnegativity constrained minimization		41
9.10	Conjugate gradient method	41
9.11	Box constrained, separable paraboloidal surrogates (WLS+SPS) algorithm	41
9.12	Gradient projection method ???	41
9.13	Conjugate gradient	42
9.13.1	Coordinate descent	42
9.13.2	SOR+	42
9.13.3	Separable paraboloidal surrogates	42
9.13.4	ISRA	42
9.13.5	Quasi-Newton	42
9.13.6	notes	42
9.14	Misc	43
9.14.1	Notes	43
9.14.2	t,obj	43
9.14.3	Line Search	43
9.14.4	t,init	44
9.14.5	ART2 for QPWLS	44
10 Algorithms for Regularized Least Squares Image Reconstruction		1
10.1	Introduction	1
10.2	Regularization	1
10.3	SVD analysis of regularization	1
10.4	Truncated SVD	2
10.5	Regularization	3
10.6	Edge-preserving regularization	3
10.7	Total variation regularization	3
10.8	Splines	4
10.9	Splines with uniform sampling	4
11 Emission ML Image Reconstruction		1
11.1	Introduction (s,eml,intro)	1
11.2	The Problem (s,eml,prob)	1
11.3	ML estimates are bounded (s,eml,bound)	3
11.4	E-ML-EM and E-ML-EM-3 Algorithms (s,eml,em,intro)	4
11.4.1	E-ML-EM-3 iterates are well defined (s,eml,em,def)	5
11.4.2	E-ML-EM-3 iterates are bounded (s,eml,em,bound)	6

11.4.3 Relationship to Kullback-Leibler divergence (s,eml,em,kl)	7
11.5 E-ML-EM-3 Algorithm Derivations	8
11.5.1 Fixed-point “derivation” (s,eml,em,fix)	8
11.5.2 Optimization transfer derivation (s,eml,em,adp)	8
11.5.3 Expectation-Maximization (EM) derivation (s,eml,em,em)	9
11.5.4 Posinomial derivation (s,eml,em,pos)	10
11.5.5 Alternating minimization derivation (s,eml,amp)	11
11.5.6 E-ML-EM Convergence Proof (s,eml,em,proof)	15
11.5.7 Slow Convergence (s,eml,em,slow)	23
11.5.8 Acceleration Methods (s,eml,em,accel)	23
11.5.8.1 Grid refinement	23
11.5.8.2 Raised powers	23
11.5.8.3 Over-relaxation	23
11.5.8.4 Line search	23
11.5.8.5 Implementation tricks	24
11.5.8.6 Hardware acceleration	24
11.5.8.7 Mismatched backprojectors	24
11.5.9 Stopping Rules (s,eml,em,stop)	24
11.6 SAGE	24
11.7 Paraboloidal Surrogates Approaches	24
11.8 General-purpose optimization methods	24
11.9 Ordered-subsets methods (s,eml,os)	24
11.10 Incremental EM methods (s,eml,em,inc)	25
11.11 Computing the n_i 's for the Poisson emission model	25
11.12 Separable Paraboloidal Surrogates (E-ML-SPS) Algorithm	25
11.13 Paraboloidal Surrogates Coordinate Ascent (E-ML-PSCA) Algorithm	25
11.14 Discussion	25
11.15 EMS (s,eml,ems)	25
11.16 Notes (s,eml,note)	25
11.17 Problems (s,eml,zprob)	26
12 Emission Image Reconstruction	1
12.1 Introduction	1
12.2 Notes	1
12.3 The Problem	1
12.4 EM Algorithms	2
12.4.1 EM Algorithm	2
12.4.2 An improved EM algorithm	3
12.4.3 With quadratic regularization E-EM-DP	5
12.5 Paraboloidal Surrogates Approaches	6
12.5.1 Computing the n_i 's for the Poisson emission model	8
12.5.2 Separable Paraboloidal Surrogates (E-ML-SPS) Algorithm	8
12.5.3 Paraboloidal Surrogates Coordinate Ascent (E-ML-PSCA) Algorithm	10
12.6 Abstract	10
12.7 The New Algorithm	10
12.8 Results	11
12.9 Discussion	12
12.10 Other stuff	13
12.11 Alternating minimization procedure	13

13 Transmission Imaging	1
13.1 Afterglow (s,xray,afterglow)	2
13.2 Introduction (s,tran,intro)	4
13.3 A general physical model for X-ray CT (s,tran,model)	5
13.3.1 Introduction	6
13.3.2 Afterglow	8
13.3.3 Sketch of approach	8
13.3.4 More physical model (s,tran,model2)	9
13.3.5 Theory	9
14 Monoenergetic Transmission Image Reconstruction	1
14.1 Introduction	1
14.2 Notes	1
14.3 The Problem	1
14.4 Separable Paraboloidal Surrogates (T-ML-SPS) Algorithm	1
15 Preconditioning	1
15.1 Introduction	1
16 i	3
16.1 Surrogate function line search	3
17 Back matter	1
17.1 Glossary	1
17.2 Symbol Table	1
18 Misc	1
18.1 MRI that is T_2^* sensitized	2
18.2 Dynamic image reconstruction (s,misc,dynamic)	3
18.3 Tomographic projections and orthogonal projections	3
18.4 Regularized least-squares phase retrieval	4
18.4.1 Optimization transfer approach	4
18.4.2 Separable paraboloidal surrogate	5
18.5 Bounding the minimizer of a <i>cost function</i>	6
18.6 SPECT sourceless attenuation correction	7
18.7 Measurement model	7
18.8 ML Reconstruction	9
18.9 Paraboloidal surrogates algorithm	9
18.10 Multi-channel pinhole design	11
18.10.1 Measurement Model	11
18.10.2 Estimator	11
18.10.3 Resolution Properties	12
18.10.4 Problem	12
18.11 Gaussian Random Fields	13
18.11.1 GRF	13
18.12 Reconstruction from limited views using prior information	14
18.12.1 Problem statement	14
18.12.2 Standard Methods	14
18.12.3 Regularized methods	14
18.12.4 Proposed Methods	15
18.13 Convergence analysis of general iterations	16

19 Detection	1
19.1 Overview (s,det,intro)	2
19.2 SKE detection in Gaussian noise (s,det,ske)	2
19.3 Ideal observer	2
19.4 Linear reconstruction methods	3
19.5 Ideal observer for linear reconstructions	3
19.6 Generic linear observers	4
19.7 Fisher observers and Fisher reconstructors	4
19.7.1 Prewhitenning (PW) observer	5
19.7.2 ROI observer	5
19.7.3 Non-prewhitening (NPW) observer	6
19.7.4 Summary of Fisher observers and reconstructors	6
19.8 CHO observer (s,det,cho)	7
19.8.1 Optimal reconstructors for CHO (s,det,cho,opt)	8
19.9 PWLS reconstructors (s,det,pwls)	10
19.10 PWLS and CHO (s,det,pwls,cho)	10
19.11 1D Example	12
19.12 Notes	12
19.13 PWLS and NPW (s,det,pwls,npw)	13
19.14 Post-filtered WLS for NPW	14
19.15 Junk (s,det,junk)	15
19.16 Future Work	15
19.17 Old	15
19.18 Discussion (somewhat obsolete)	15
20 Mean and Variance Analysis	1
20.1 Introduction (s,mav,intro)	1
20.2 Biases of DWLS	1
20.3 Covariance of implicit estimators (s,mav,cov)	2
20.4 Application to penalized likelihood	3
★ Mean and Variance of Implicitly Defined Biased Estimators (such as Penalized Maximum Likelihood): Applications to Tomography	5
20.5 Introduction	5
20.6 Approximations	6
20.6.1 Covariance	7
20.6.2 Mean	8
20.6.3 Independent Measurements	9
20.6.4 Scalar Parameter	10
20.7 Example: Regularized Least Squares	10
20.8 Example: Transmission Tomography	11
20.8.1 Covariance Approximation	12
20.8.2 Empirical Results	13
20.9 Post-Estimation Plug-In Variance Approximation	14
20.10 Example: Emission Tomography	15
20.10.1 Covariance Approximation	15
20.10.2 Empirical Results	16
20.10.3 Mean: 2nd Order	16
20.11 Discussion	17
20.12 Appendix	18
20.13 Todo log-normal	18

21 Spatial Resolution Properties	1
21.1 Introduction (s,srp,intro)	2
21.1.1 Definitions	2
21.2 Resolution Analysis of Iterations (s,srp,iter)	3
21.3 1D Analysis of Impulse Response (s,srp,dtft)	5
21.4 N-D Analysis	6
21.5 Notes (s,srp,note)	7
22 Tomographic system geometries	1
22.1 Parallel-beam strip-integral system model (s,geom,strip)	2
22.2 Generalizations for shift-like geometries (s,geom,shift)	4
22.3 Fan beam transmission system matrix (t,fan)	5
22.3.1 Bin support	6
22.3.2 First-order approximation	7
22.3.3 Old corner discussion	8
22.3.4 Old incomplete reasoning...	9
22.4 3D PET mashing/span/tilt (t,span,3d)	10
22.5 todo (s,geom,todo)	12
23 Matrices and linear algebra	1
23.1 Eigenvalues and eigenvectors	1
23.2 Vector norms (s,mat,vnorm)	1
23.3 Matrix norms (s,mat,mnorm)	2
23.4 Matrix properties (s,mat,prop)	6
23.5 Rank ordering of positive definite matrices (s,mat,pos,def,inv)	6
23.6 The four spaces	8
24 Mathematical background	1
24.1 Gradients (s,math,gradient)	1
24.1.1 Gradients of linear and quadratic forms	1
24.1.2 Taylor series expansions	1
24.2 Convexity (s,math,convex)	3
24.2.1 Convex sets	3
24.2.2 Convex projections	3
24.2.3 Convex functions	4
24.2.4 Minimization of convex functions	6
24.3 Minimization over complex vectors (s,math,complex)	8
25 Probability and random variables	1
25.1 Gaussian	1
25.2 Poisson	1
25.3 Covariances	2
