# Introduction

The RoHS-compliant SmartFusion™ Evaluation Kit (A2F-EVAL-KIT) enables designers to develop applications that involve one or more of the following:

- Microcontroller applications
- Embedded ARM® Cortex™-M3-based systems

**Figure 1 • A2F-EVAL-KIT**

## Kit Contents

Table 1 lists the contents of the SmartFusion Evaluation Kit..

**Table 1 • A2F-EVAL-KIT Contents**

Quantity	Description
1	SmartFusion Evaluation Board with SmartFusion A2F200M3F-FGG484ES device
2	USB 2.0 A to mini-B cable
1	Quickstart card

## Board Description

The SmartFusion Evaluation Kit board is designed to provide a development platform for users to evaluate all the features of the world's only FPGA with a hard ARM Cortex-M3 powered microcontroller subsystem (MSS) along with programmable analog.

The board supports a SmartFusion device in an FG484 package. To enable the MSS, analog, and features for evaluation, the board includes the following:

- Ethernet and USB-to-UART interface for communication with the Ethernet and UART peripherals of the SmartFusion MSS
- SPI flash that interfaces with the SPI peripherals of the SmartFusion MSS
- Organic light-emitting diode (OLED) that interfaces with the I<sup>2</sup>C peripheral of the SmartFusion MSS
- I<sup>2</sup>C Interface
- Current monitoring and temperature monitoring circuits
- RVI header for application programming and debug from either Keil® U-LINK® Or IAR J-Link, integrated integrated low-cost programmer to enable programming and debugging from Actel design tools, FlashPoint and Soft Console

**Table 2** describes the SmartFusion Development Kit board components.

**Table 2 • SmartFusion Evaluation Kit Board Components**

Name	Description
A2F200M3F-FGG484ES	Actel SmartFusion FPGA with hard ARM Cortex-M3
OLED DISPLAY	Organic 96×16 pixel blue OLED PMO13701 with option to interface either interfacing with I2C0 port of SmartFusion MSS
SPI FLASH	8 MByte SPI flash Atmel AT25DF641-MWH-T connected to SPI port 0 of the SmartFusion MSS
OSC-20	20 MHz / 20 PPM clock oscillator
OSC-32	32.768 KHz low-power oscillator
USB/UART	USB-to-UART adapter chip CP2102 and connector interfacing with UART port 0 of the SmartFusion MSS
ETHERNET	RJ45 connector (Ethernet jack with magnetics) interfacing with National Semiconductor 10/100 PHY chip DP83848C in RMII mode interfacing with Ethernet port of SmartFusion MSS (on-chip MAC and external PHY)
CURRENT	Current monitoring using thumbwheel POT (RV1)
TEMP	Temperature monitoring with temperature diode
RVI HEADER	RVI header for application programming and debug from Keil U-LINK or IAR J-Link
FP3_PROG	Integrated low-cost programmer
PUSH-BUTTON SWITCHES	Two push-button switches connected to GPIOs, which can be used as test and navigation switches
LEDS	Eight active low LEDs that can be connected to user I/O for debug to power on the board
USER I/Os	Five general purpose user I/Os that can be used for Direct-C signaling, interfacing and debugging purposes
PUSH-BUTTON RESET	Push-button system reset for SmartFusion FPGA System6
MIXED_CONN100	Mixed-signal header

# 1 – Installation and Settings

## Software Installation

Download and install the latest release of Libero® Integrated Design Environment (IDE) (v9.0 or later) from the Actel website and register for your free Gold license. For instructions on how to install Libero IDE and SoftConsole, refer to the Libero IDE Installation and Licensing Guide, available on the Actel website: [www.actel.com/documents/install\\_ug.pdf](http://www.actel.com/documents/install_ug.pdf).

## Jumpers, Switches, and LED Settings

The recommended default jumpers, switches, LEDs, and DIP switch settings are defined in [Table 1](#) through [Table 4 on page 8](#). Connect the jumpers with the default settings to enable the pre-programmed demonstration design to function correctly.

The available headers and their usage are detailed in [Table 5](#) and [Table 6 on page 9](#).

**Table 1 • SmartFusion Evaluation Kit Jumper Settings**

Jumper	Function	Default Setting	Notes
J6	Jumper to select second 3.3 V (V3P3_F2) power supply for board	Closed	
JP6	Jumper to select either 1.5 V external regulator or SmartFusion 1.5 V internal regulator		
	Pin 1–2 = 1.5 V internal	Closed	
	Pin 2–3 = 1.5 V external	Open	
JP7	Jumper to select between RVI header or LCP header for application debug		
	Pin 1–2 = USB programming and SoftConsole	Closed	
	Pin 2–3 = RVI for Keil U-LINK / IAR J-link	Open	
JP10	Jumper to select JTAGSEL		Allows selection of A2F2 programming or Cortex-M3 debug with integrated low-cost programmer
	Pin 1–2 = FPGA, allows A2F2 programming	Closed	
	Pin 2–3 = M3, allows Cortex-M3 debug	Open	

**Table 2 • SmartFusion Evaluation Kit Push-Button Switches**

<b>Push-Button Switch</b>	<b>SmartFusion FPGA Pin</b>	<b>Comment</b>
SW1	G19	Test and navigation switch
SW2	G20	Test and navigation switch
SW3	W7(PU_N)	Push-button switch for PUB. This negative active switch is connected to the PUB pin, which is a digital input to the FPGA. PUB is the connection for the external momentary switch used to turn on the 1.5 V voltage regulator.
SW4	R1 (MSS_SYSRESET)	System Reset for DUT

**Table 3 • SmartFusion Evaluation Kit LEDs**

<b>LED</b>	<b>SmartFusion FPGA Pin</b>	<b>Comment</b>
D1	B19	Test LED for user application
D2	B20	Test LED for user application
D3	C19	Test LED for user application
D4	H17	Test LED for user application
D5	H20	Test LED for user application
D6	C21	Test LED for user application
D7	D21	Test LED for user application
D8	G21	Test LED for user application
D11	N/A	UART over USB link indicator LED
D14	N/A	Programmer activity indicator LED
D15	N/A	Programmer ON indicator LED
D16	N/A	SPEED LED. The LED is ON when device is in 100 Mbps mode and OFF when in 10 Mbps mode.
LED1	N/A	USB power supply indicator LED. This GREEN LED is ON when the board is powered on.

**Table 4 • Test Points**

<b>Test Point</b>	<b>Comment</b>
TP7, TP8	Digital ground (GND)
TP11	3.3 V supply for SmartFusion
TP12	1.5 V supply for SmartFusion
TP13	Analog ground (AGND)

**Table 5 • J22 Header Strip – User I/Os**

<b>Pin</b>	<b>SmartFusion FPGA I/O</b>
1	J19
2	J20
3	J21
4	J22
5	K19

**Table 6 • Header for VAREF Monitoring**

J5	Used to monitor VAREF0 driven from VAREFOUT output of A2F
J8	Used to monitor VAREF1 driven from VAREFOUT output of A2F

**Note:** Never put a jumper on these headers. These are provided to measure and monitor VAREF0 and VAREF1

## Testing the Hardware

If the board is shipped directly from Actel, it contains a test program that determines whether the board works properly. If while using the board you suspect that the board is damaged, you can rerun the "Manufacturing Test" on page 45 to verify functionality of the key components of the board.

---

## 2 – Hardware Components

---

### FPGA Description and Connections

The SmartFusion Development Kit Board is populated with a SmartFusion A2F200-FG484, the world's only FPGA with hard ARM Cortex-M3. The key features of SmartFusion are listed below.

The microcontroller subsystem (MSS) consists of the following:

- 100 MHz 32-bit ARM Cortex-M3
  - 1.25 DMIPS/MHz throughput from zero wait state memory
- Internal memories
  - Embedded flash memory (eNVM), 64 Kbytes to 512 Kbytes
  - Embedded high-speed SRAM (eSRAM), 16 Kbytes to 64 Kbytes, implemented in two physical blocks to enable simultaneous access from two different masters
- Multi-layer AHB communications matrix
  - Provides up to 16 Gbps of on-chip memory bandwidth
- 10/100 Ethernet MAC with RMII interface
- Programmable external memory controller, which supports the following:
  - Asynchronous memories
  - NOR flash, SRAM, PSRAM
  - Synchronous SRAMs
- Two I<sup>2</sup>C peripherals
- Two 16550 compatible UARTs
- Two SPI peripherals
- Two 32-bit timers
- 32-bit watchdog timer
- 8-channel DMA controller
- Clock sources
  - 1.5 MHz to 20 MHz main oscillator
  - Battery-backed 32 KHz low-power oscillator with real-time counter (RTC)
  - 100 MHz embedded RC oscillator 1% accuracy
  - Embedded PLL with 4 output phases
- High-performance FPGA
- Based on Actel's proven ProASIC® FPGA fabric
- Analog front-end (AFE)
- Up to three 12-bit SAR analog-to-digital converters (ADCs)
- One first-order ΣΔ (sigma delta) digital-to-analog converter (DAC) per ADC
- Up to 5 new high-performance analog signal conditioning blocks (SCB) per device
- Two high-speed comparators
- Analog compute engine (ACE)
  - Offloads CPU from analog initialization and processing of ADC, DAC, and SCBs
  - Sample sequencing engine for ADC and DAC parameter setup
  - Post-processing engine (PPE) for functions such as low-pass filtering and linear transformation

**Table 1 • A2F200 Key Features**

<b>Feature</b>	<b>Specification</b>
System gates	200,000
Tiles (D-flip-flops)	4,608
RAM blocks (4,608 bits)	8
Flash (Kbytes)	256
SRAM (Kbytes)	64
Cortex-M3 with MPU	1
10/100 Ethernet MAC	Yes
External memory controller (EMC)	26-bit address, 16-bit data
DMA	8 Ch
I <sup>2</sup> C	2
SPI	2
16550 UART	2
32-bit timer	2
PLL	1
32 KHz low-power oscillator	1
100 MHz on-chip RC oscillator	1
Main oscillator	1
ADCs (12-bit SAR)	2
DACs (1-bit sigma-delta)	2
Signal conditioning blocks (SCBs)	4
Comparators*	8
Current monitors*	4
Temperature monitors*	4
HV bipolar voltage monitors*	8
Direct analog inputs to ADC*	18

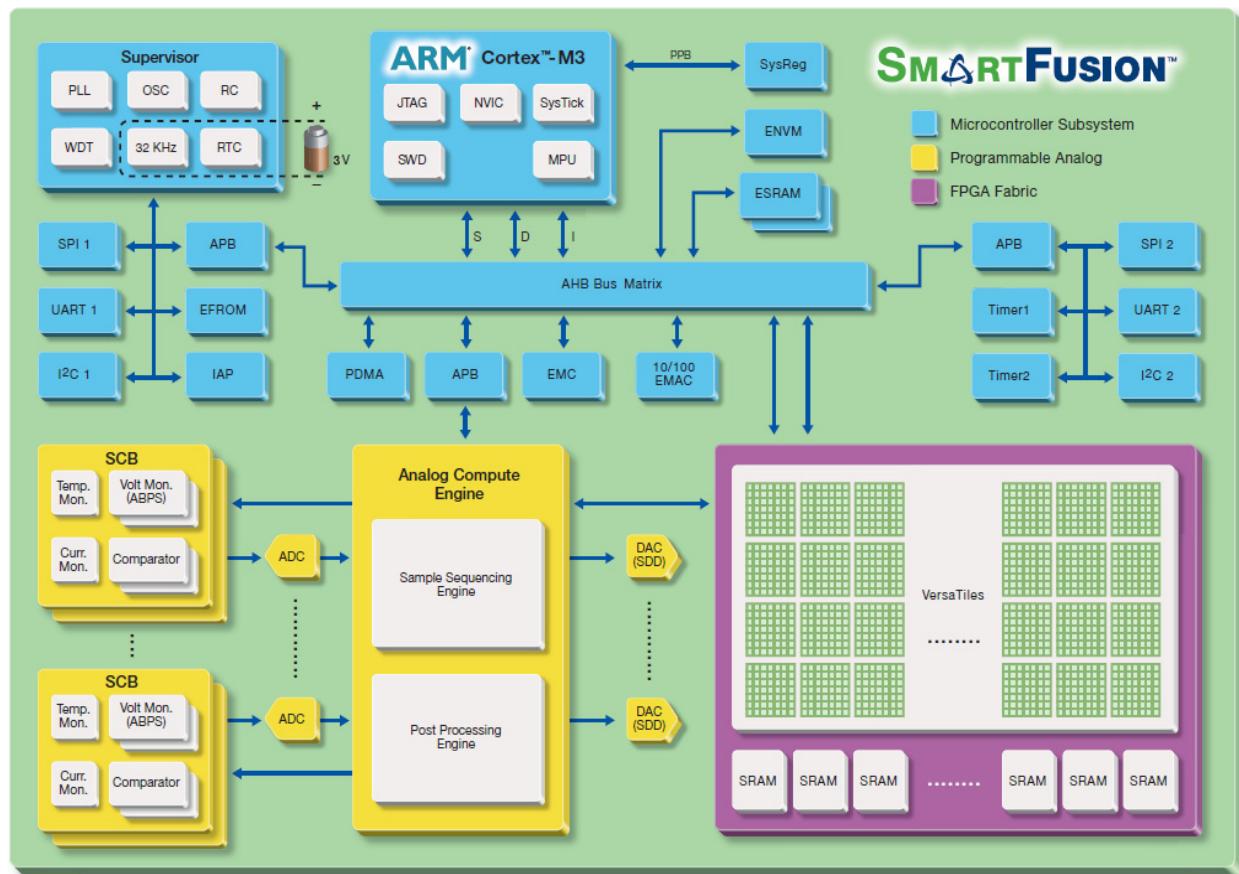

*Note:* \*The maximum available resources have dependencies. For additional information on SmartFusion, refer to the SmartFusion datasheet..

**Table 2 • A2F200 I/Os**

I/Os	FG484
Direct analog input	8
Total analog input	24
Total analog output	2
MSS I/Os <sup>1,2</sup>	41
FPGA I/Os	94
Total I/Os	161

**Notes:**

1. 16 MSS I/Os are multiplexed and can be used as FPGA I/Os, if not needed for MSS. These I/Os support Schmitt triggers and support only LVTTL and LVCMOS (1.5/1.8/2.5, and 3.3 V) standards.
2. 9 MSS I/Os are primarily for 10/100 Ethernet MAC and are also multiplexed and can be used as FPGA I/Os if Ethernet MAC is not used in a design. These I/Os support Schmitt triggers and support only LVTTL and LVCMOS (1.5/1.8/2.5, and 3.3 V standards).

**Figure 1 • SmartFusion MSS Block Diagram**

## I/O Pin Connections

The A2F200M3F-FGG484ES pin list is provided in the "Pin List" on page 31.

## SmartFusion FPGA Hard ARM Cortex-M3

The SmartFusion FPGA comes with a hard Cortex-M3 advanced processor-based MSS. The ARM Cortex-M3 microcontroller is a low-power processor that features low gate count, low predictable interrupt latency, and low-cost debug. It is intended for deeply embedded applications that require fast interrupt response features. SmartFusion devices use the R1P1 version of the Cortex-M3 core. Some of the important subsystems are listed below:

- Memory protection unit (MPU)
- Single cycle multiplication, hardware divide
- JTAG debug (4 wire), Serial Wire Debug (SWD – 2 wire) and Serial Wire Viewer (SWV) interfaces

The evaluation board is populated with components to enable development using the MSS. These components include SPI flash, OLED, and communication interfaces such as Ethernet and USB-to-UART.

## Power Sources

### SmartFusion FPGA Power Sources

The evaluation kit board is powered through USB. The USB power will supply power to three voltage rails: 3.3 V, 1.5 V, and 10 V.

- Linear LT1963AES8 (1.5 A), supplies 3.3 V rails
- Linear LT3080 (1.1 A), supplies 1.5 V rails
- Linear LT1615 step-up converter supplies 10 V, 100 mA typical, for driving the OLED

**Note:** The USB can provide a maximum current of 500 mA. If the application requires a daughter board, the user must use an independent power supply source.

## 3 – Component Descriptions and Connections

### VAREF Connections

The SmartFusion device has one external VAREF input pin for each of the ADCs in the device. These are VAREF0 for ADC0 and VAREF1 for ADC1 (Figure 1). The internal VAREF is brought out as an output. This is available as the VAREFOUT output pin.

On the A2F-EVAL-KIT board, the VAREF0 and VAREF1 inputs are hardwired to the VAREFOUT output of the SmartFusion device (Figure 2). This means the user should not drive these inputs from any external source. Two headers, J5 and J8, are provided to monitor the VAREF0 and VAREF1 for any debug purposes.

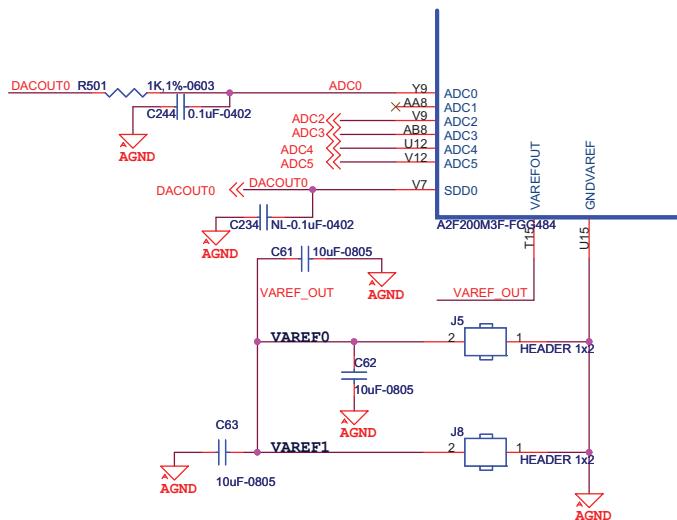

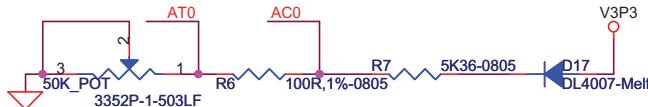

Figure 1 • VAREFOUT to VAREF0 and VAREF1

Figure 2 • VAREF0 and VAREF1 Inputs of FPGA

## Current Sensing Circuit

A current sensing circuit is provided on the SmartFusion Evaluation Kit board for applications using the embedded current monitor. Current monitoring is performed across the AC0 and AT0 pins. The current sensing circuit is for the 3.3 V voltage rail, as shown in [Figure 3](#).

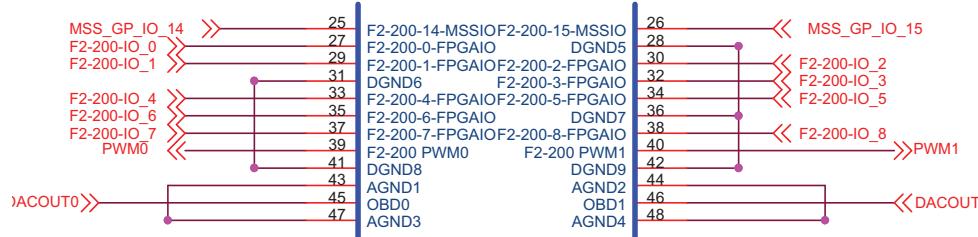

---

**Figure 3 • Current Sensing**

## PWM Circuit

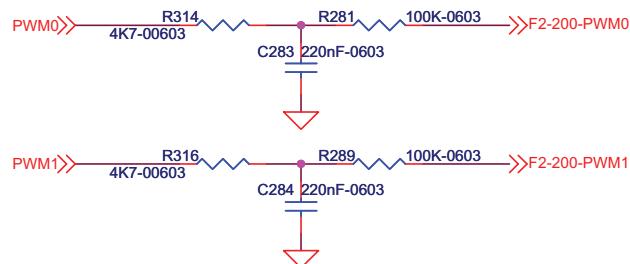

The PWM RC circuit depicted in Figure 4 and Figure 5 can be used with Actel CorePWM instantiated in the FPGA fabric to generate various voltage waveforms. These voltage waveforms can be displayed on the OLED or used via the mixed-signal header. In addition, one PWM RC circuit source is routed to the AV input pin of an analog quad. This AV pin can be used to monitor the generated voltage with high accuracy, depending on the ADC resolution configured in the FPGA.

Figure 5 shows the A2F200 pins driving PWM and the PWM circuit.

---

## **Figure 4 • PWM Pins**

---

**Figure 5 • PWM Circuit**

## Push-Button System Reset

A push-button system reset switch with a Schmitt trigger is provided on the board (Figure 6). The Schmitt trigger reduces noise on the system reset push-button. SmartFusion MSS reset is synchronized with this reset.

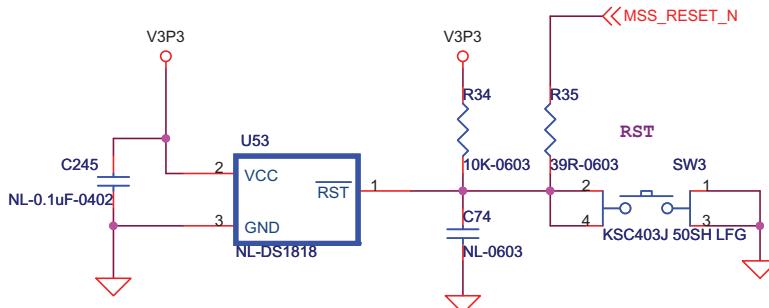

Figure 6 • Push-Button System Reset

## Push-Button Switches and User LEDs

Push-button switches and user LEDs (Figure 7) can also be used for debug and for various applications, such as gaming.

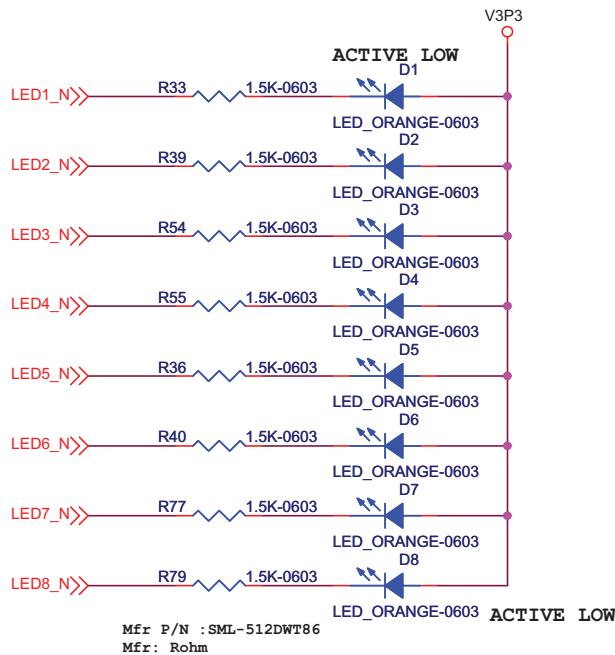

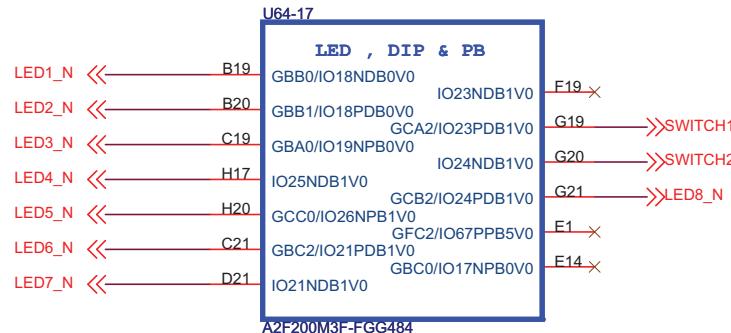

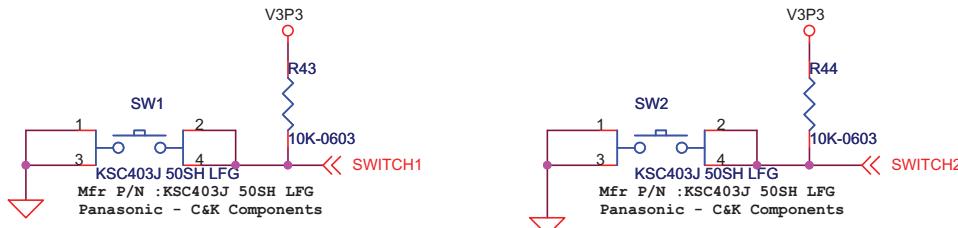

Figure 7 • Test LEDs

The board provides users access to eight active Low LEDs (Figure 8), which are connected to SmartFusion pins B19, B20, C19, H17, H20, C21, D21, and G21. In addition, the board includes two push-button switches (Figure 9) that are connected to pins G19 and G20 of the SmartFusion FPGA.

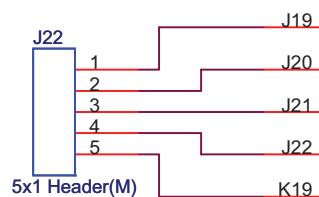

**Figure 8 • LEDs**

**Figure 9 • Push-Button Switches**

## User I/Os

The board comes with the provision of five user I/Os brought out to jumper J22 (Figure 10). These can be used as general purpose user I/Os. One of the potential applications is DirectC signaling where these five pins can be used for JTAG signals (TDI, TDO, TMS, TCK, and TRSTN). Other possible uses are for interfacing with other boards and debugging.

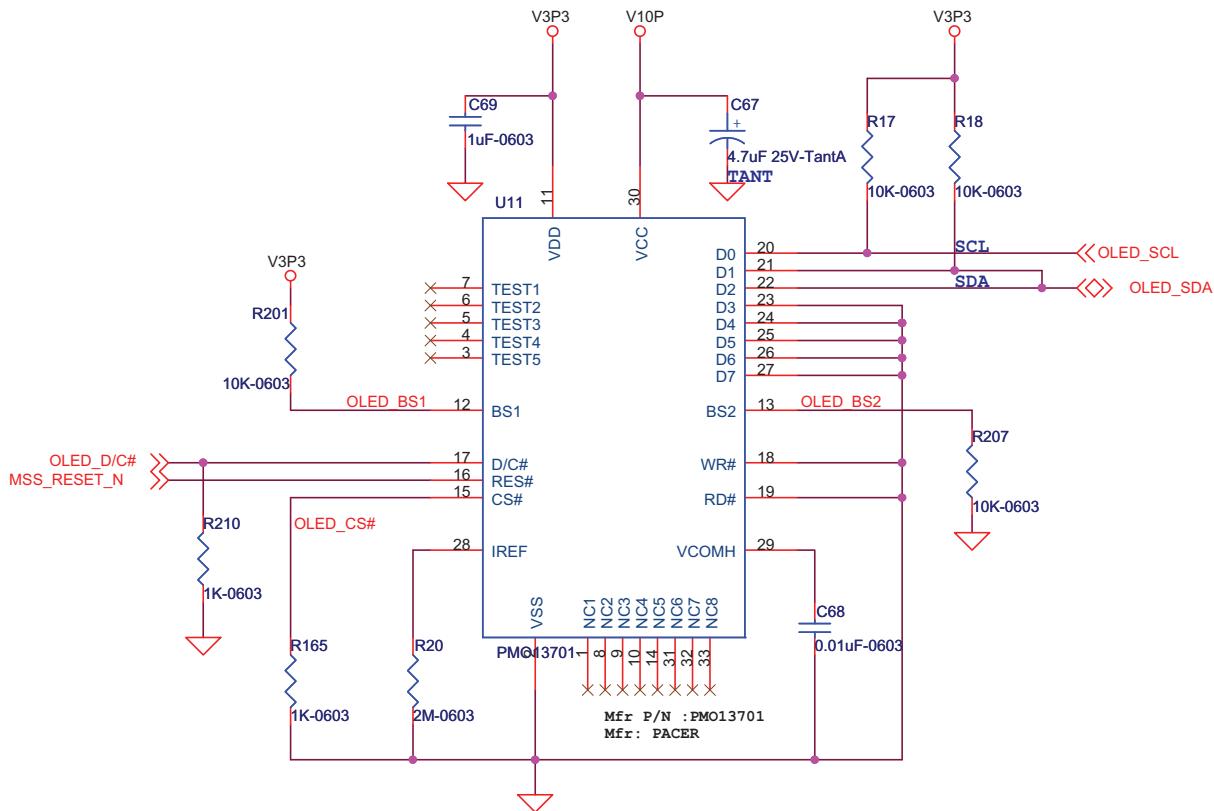

**Figure 10 • User I/Os**

## OLED Display

A 9616-pixel low-power OLED is made available on the board for display (Figure 11). This low-power device, BLUE OLED, requires 3.3 V and 10 V power supplies. The OLED is interfaced with the SmartFusion MSS I2C0 port (Figure 12).

The OLED displays sharp gaming images or text. For example, the SmartFusion RTC current time or time between two events can be displayed on the OLED. The OLED inputs OLED\_BS1, OLED\_BS2, and OLED\_CS# are tied off and OLED\_D/C# is pulled down as required to work with I<sup>2</sup>C mode.

## SPI Flash

One 8 MByte SPI flash Atmel AT25DF641-MWH-T is also offered on the board (Figure 13). This is interfaced with the SmartFusion MSS SPI0 port (Figure 14). The WP# and HOLD# inputs are pulled High on the board.

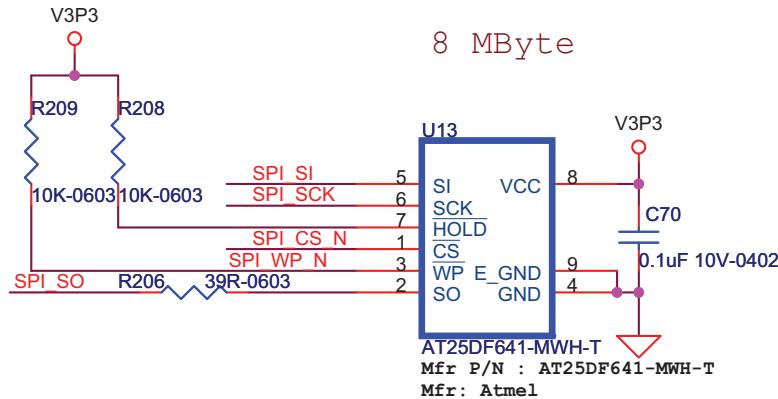

Figure 13 • SPI Flash

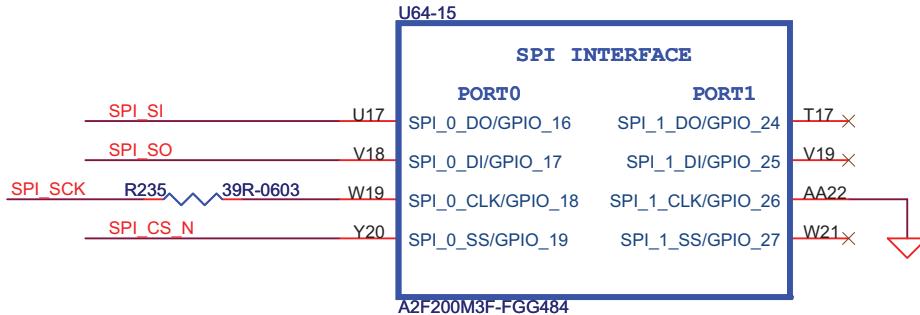

Figure 14 • SmartFusion MSS SPI0 Port

## 20 MHz Oscillator

A 20 MHz resonator of 20 PPM is placed across the MAINXIN and MAINXOUT pins of the SmartFusion FPGA with the appropriate 18 PF capacitors (Figure 15 on page 21). This is used to generate a high precision clock for Ethernet MAC and is also used in real-time counter (RTC) based applications.

## 32.768 KHz (low power) Oscillator

A 32.768 KHz Resonator CM519 is placed across the LPXIN and LPXOUT pins of the SmartFusion FPGA with the appropriate 30 pF capacitors (Figure 15). This low power resonator is useful in real-time counter (RTC) based applications.

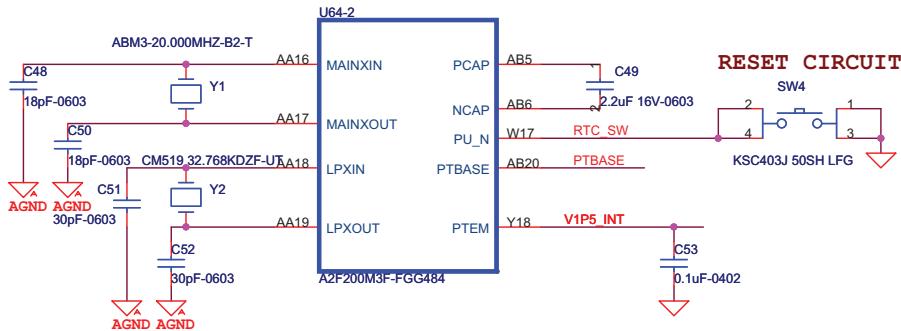

Figure 15 • 20 MHz and 32.768 KHz Oscillators

## USB-to-UART Interface

Included on the evaluation board is a USB-to-UART interface with ESD protection (Figure 16 on page 22). This interface includes an integrated USB-to-UART bridge controller (U16) to provide a standard UART connection with the SmartFusion MSS UART0 port.

One application of the USB-to-UART interface is to allow HyperTerminal on a PC to communicate with the SmartFusion FPGA. HyperTerminal is a serial communications application program that can be installed in the Windows® operating system. A basic HyperTerminal program is usually distributed with Windows. With a USB driver properly installed, and the correct COM port and communication settings selected, you can use the HyperTerminal program to communicate with a design running on the SmartFusion FPGA device.

Table 1 lists the supported UART parameters for HyperTerminal applications.

Table 1 • UART HyperTerminal Settings

Supported HyperTerminal Parameters			
Baud Rates	Data Bits	Parity Types	STOP BIT
110	5,6,7,8	NO/ODD/EVEN/MARK(1)/SPACE(0)	ONE/ONE-HALF/TWO
300			
1200			
2400			
4800			
9600			
19200			
38400			
57600			
115200			
230400			
460800			
921600			

Figure 16 shows the USB-to-UART connections and Figure 17 shows the UART0 port.

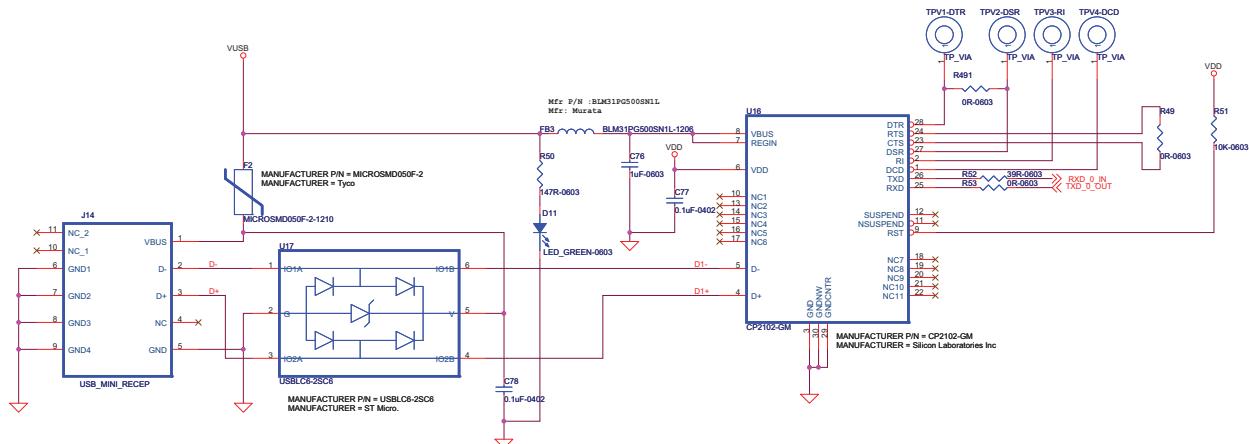

Figure 16 • USB to UART

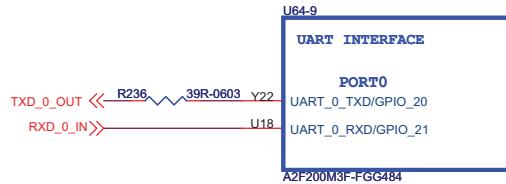

Figure 17 • UART Port 0

## Ethernet Interface

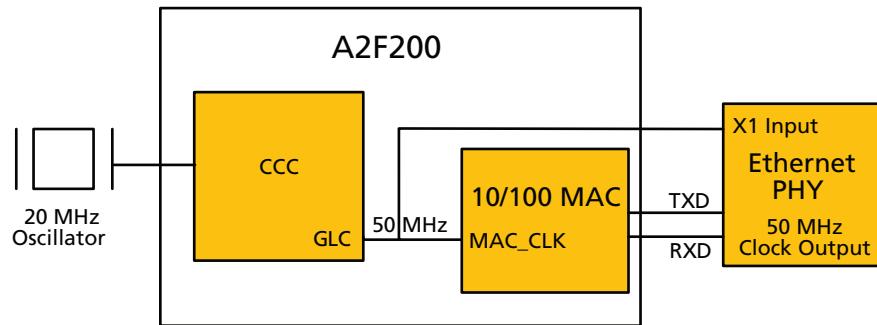

One Ethernet interface, configured for RMII Full Duplex mode, and a low-power 10/100 Mbps single-port Ethernet physical layer transceiver (U19) are provided on-board (Figure 19 on page 23). The Ethernet physical layer features integrated sub-layers to support both 10BASE-T and 100BASE-TX Ethernet protocols. These sub-layers ensure compatibility and interoperability with many other standards-based Ethernet solutions.

The Ethernet RJ45 interface and physical layer interface with the SmartFusion MSS Ethernet media access controller (MAC), which supports RMII, serve many purposes. For example, these interfaces can be used to access the SmartFusion FPGA to monitor the ADC data over a network. The embedded system memory and control registers can be accessed and processed remotely to support system management.

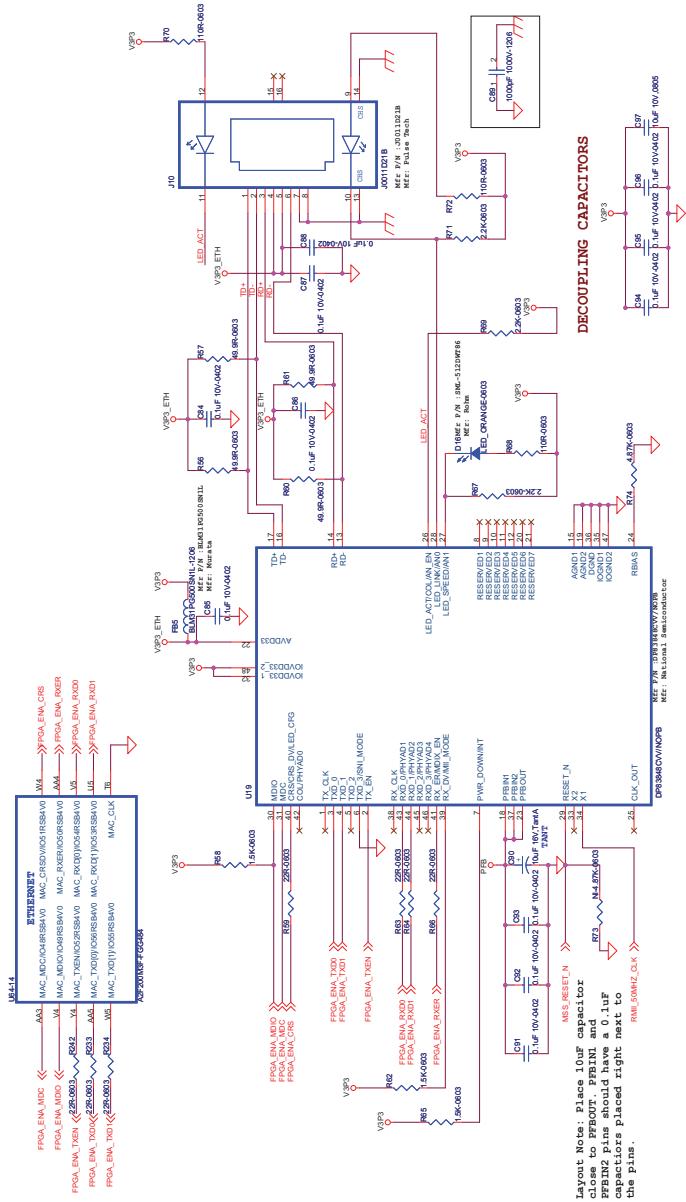

### Clocking Scheme for RMII CLK

The 10/100 MAC RMII interface requires a 50 MHz clock. The PHY device also requires a 50 MHz 20 PPM clock for proper operation. While there are several possible ways of providing the clock, the following clocking scheme has been tested on the board.

- The 20 MHz oscillator feeds the CCC input. The CCC, GLC output is configured as 50 MHz.
- The GLC feeds the MAC\_CLK (pin T6) input of the 10/100 MAC peripheral of the SmartFusion MSS.
- The same GLC is routed through the fabric and feeds the X1 input of the Ethernet PHY device on the board.

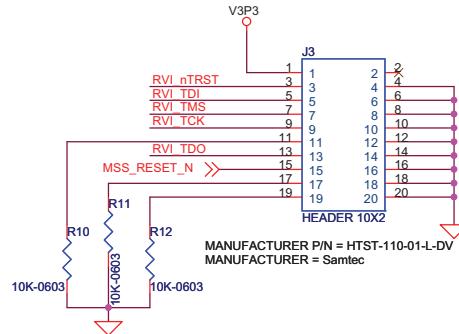

**Figure 18 • Ethernet Clocking Scheme**

**Figure 19 • Ethernet Interface**

## RealView Header

One 10x2 RealView® Header is provided on the board for debugging (Figure 20). This header allows plugging with the Keil U-LINK debugger or IAR J-Link debugger to easily debug or configure the hard ARM Cortex-M3 processor during board power-up.

**Figure 20 • RealView Header**

The jumper settings shown in Table 2 are needed for debug with Keil U-LINK or IAR J-Link.

**Table 2 • RVI Header Jumper Settings**

To Debug with Keil U-link or IAR J-link			
Jumper	Pin	Pin	Connection Details
JP7	2	3	To select RealView® JTAG header
JP10	2	3	To select Cortex-M3 debug

## Integrated Low-Cost Programmer (LCP)

The board comes with a built-in programmer to program the SmartFusion device and debug software with SoftConsole.

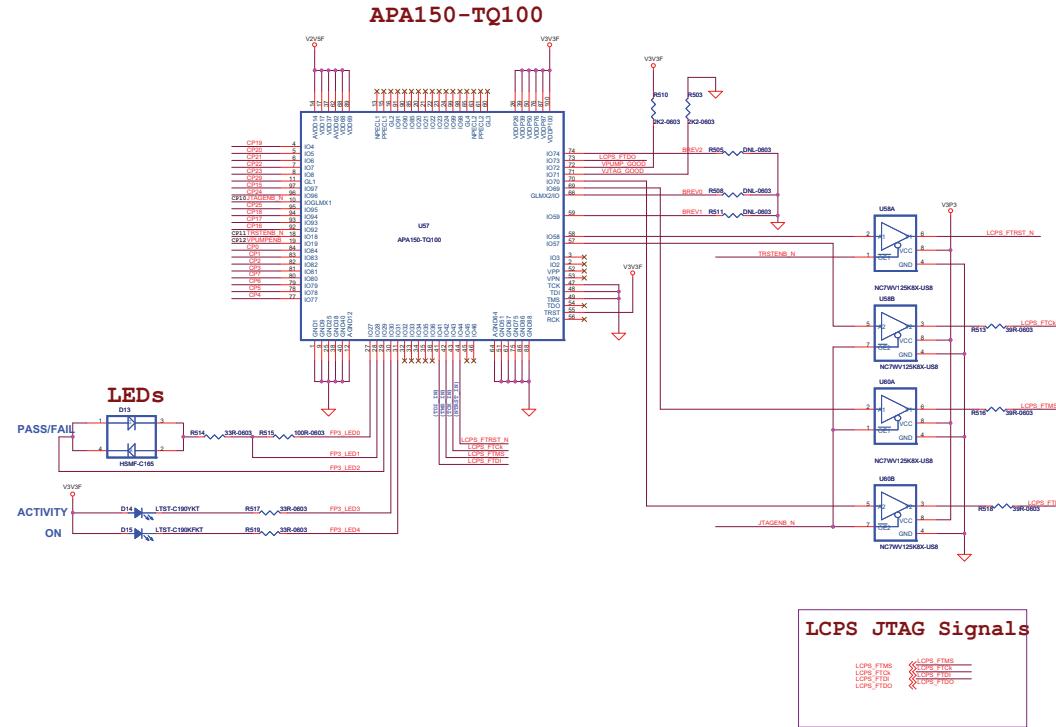

Figure 21 • Integrated Low-Cost Programmer

Table 3 • Jumper Settings to Debug with SoftConsole

To Debug with SoftConsole			
Jumper	Pin	Pin	Connection Details

Table 4 • Jumper Settings for A2F200 Programming

To Program with Built-In LCP			
Jumper	Pin	Pin	Connection Details
JP7	1	2	To select the integrated LCP
JP10	1	2	To select the SmartFusion device

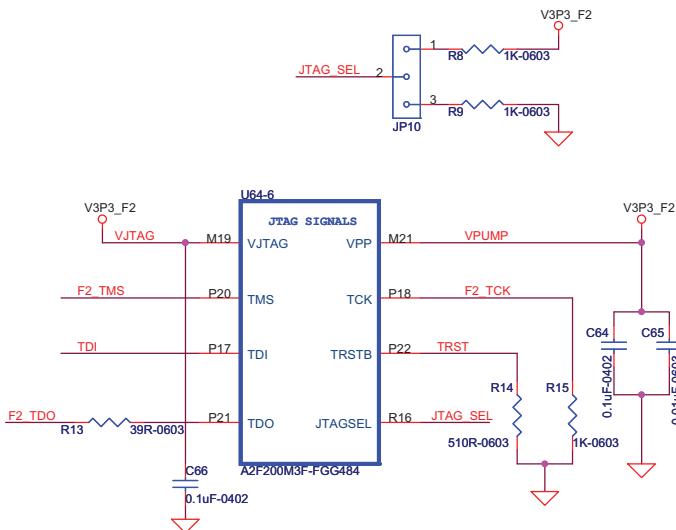

Figure 22 • A2F200 JTAG Connections

## Temperature Diode

A temperature diode is provided on the board to measure ambient temperature (Figure 23). This is used in battery charging and MPM applications. This diode is connected to the AT1 input of SmartFusion FPGA.

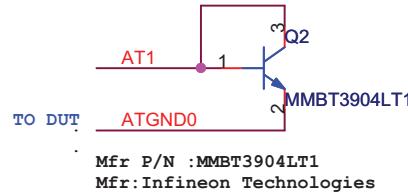

Figure 23 • Temperature Diode

## Mixed-Signal Header

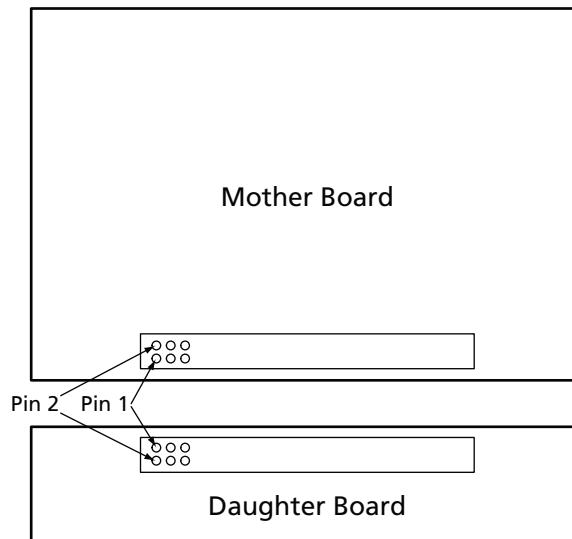

The mixed-signal header can be obtained from Samtec, using the following part numbers:

Mother Board Header 2X50 50 mil pitch: Samtec FTSH-150-04-L-D-RA (populated in the evaluation board)

Daughter Board Header 2X50 50 mil pitch: Samtec CLP-150-02-L-DH

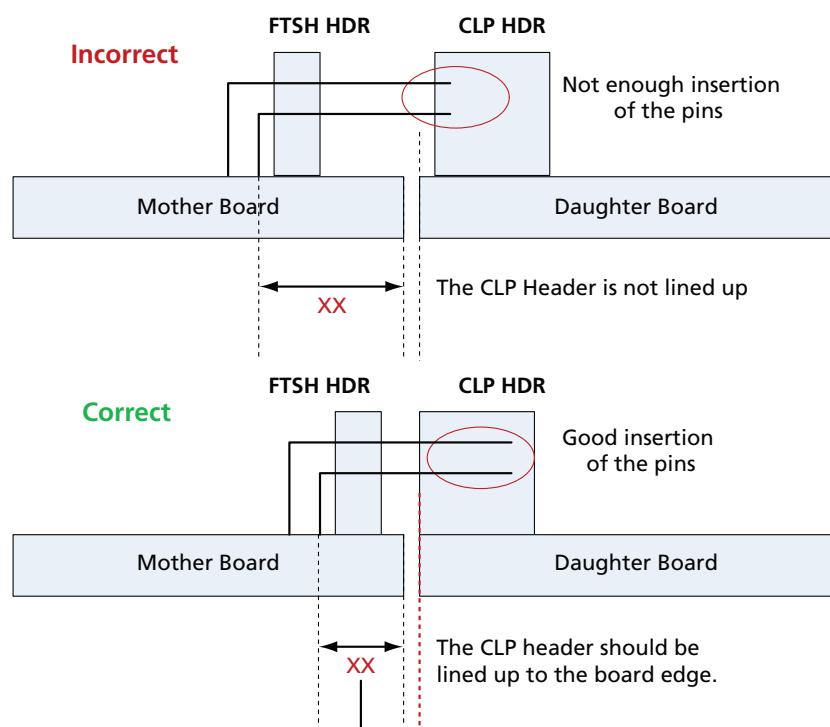

The detailed instructions given below must be followed to ensure the correct orientation and insertion into the mother board.

Figure 24 (top view) indicates the orientation of the mixed-signal headers on the mother board and daughter board.

**Figure 24 • Top View of Mixed-Signal Headers Correct Orientation**

Ensure that the header is placed such that a full insertion is possible between the two headers (Figure 25).

**Note:** XX is the critical length. Ensure that the connector is placed close enough so there is a good connection with the mating connector. This is applicable when designing the daughter board or the mother board.

**Figure 25 • Correct Insertion of Daughter Board**

When designing a daughter board to plug into an A2F-EVAL-KIT:

- Ensure the CLP header edge is lined up against the edge of the board.
- This will provide maximum insertion into the SmartFusion evaluation board.

When designing a mother board for an existing daughter board (MPM DB, for example):

- Ensure that the length, denoted by XX, is kept less than 150 mils.
- Use the SmartFusion Evaluation Kit PCB files ([http://www.actel.com/download/rsc/?f=A2F\\_EVAL\\_KIT\\_BF](http://www.actel.com/download/rsc/?f=A2F_EVAL_KIT_BF)) .

## Pinout Definition

Table 5 provides the pinout definition for the mixed-signal header.

**Table 5 • Pinout Definition**

J21-Pin	Net Name	Pin Number	Description	J21-Pin	Net Name	Pin Number	Description

2. Analog signal.

## 4 – Pin List

---

Below is the pin list applicable to the SmartFusion A2F200M3F-FGG484ES device.

A2F200 Pin Number	A2F200 Pin Name	Board Signal Name
A1	GND1	GND
A2	NC2	NC
A3	NC5	NC
A4	GND7	GND
A5	EMC_CS0_N/GAB0/IO01NDB0V0	NC
A6	EMC_CS1_N/GAB1/IO01PDB0V0	NC
A7	GND8	GND
A8	EMC_AB[0]/IO04NDB0V0	NC
A9	EMC_AB[1]/IO04PDB0V0	NC
A10	GND2	GND
A11	NC1	NC
A12	EMC_AB[7]/IO07PDB0V0	NC
A13	GND3	GND
A14	EMC_AB[12]/IO10NDB0V0	NC
A15	EMC_AB[13]/IO10PDB0V0	NC
A16	GND4	GND
A19	GND5	GND
A20	NC3	NC
A21	NC4	NC
A22	GND6	GND
AA1	GPIO_4/IO43RSB4V0	MSS_GP_IO_4
AA2	GPIO_12/IO37RSB4V0	MSS_GP_IO_12
AA3	MAC_MDC/IO48RSB4V0	FPGA_ENA_MDC
AA4	MAC_RXER/IO50RSB4V0	FPGA_ENA_RXER
AA5	MAC_TXD[0]/IO56RSB4V0	FPGA_ENA_TXD0
AA6	ABPS0	V10P
AA7	TM1	AT1
AA8	ADC1	NC
AA9	GND15ADC1	AGND
AA10	GND33ADC10	AGND
AA11	CM3	AC3

A2F200 Pin Number	A2F200 Pin Name	Board Signal Name
AA12	GNDTM1	ATGND1
AA13	ADC10	NC
AA14	ADC9	NC
AA16	MAINXIN	AGND (Y1,C48)
AA17	MAINXOUT	AGND (Y1,C50)
AA18	LPXIN	AGND (Y2,C51)
AA19	LPXOUT	AGND (Y2,C52)
AA20	NC6	NC
AA21	NC7	NC
AA22	SPI_1_CLK/GPIO_26	GND
AB1	GND9	GND
AB2	GPIO_13/IO36RSB4V0	MSS_GP_IO_13
AB3	GPIO_14/IO35RSB4V0	MSS_GP_IO_14
AB4	GND11	GND
AB5	PCAP	C49
AB6	NCAP	C49
AB7	ABPS3	AV2_1
AB8	ADC3	ADC3
AB9	GND15ADC0	AGND
AB10	VCC33ADC1	V3P3A
AB11	VAREF1	VAREF_OUT
AB12	TM2	AT2
AB13	CM2	AC2
AB14	ABPS4	V3P3
AB15	GNDAQ1	AGND
AB16	GNDMAINXTAL	AGND
AB17	GNDLPXTAL	AGND
AB18	VCCLPXTAL	V3P3A
AB19	VDDBAT	GND
AB20	PTBASE	PTBASE

## 5 – Board Stackup

### Board Stack-Up

The SmartFusion Evaluation Kit board is built on a 6-layer printed circuit board (PCB). The silkscreen is provided in [Figure 5-2 on page 5-44](#). The full PCB design layout is provided on the SmartFusion Evaluation Kit page of the Actel website:

[www.actel.com/products/hardware/devkits\\_boards/smartfusion\\_eval.aspx](http://www.actel.com/products/hardware/devkits_boards/smartfusion_eval.aspx).

To view the PCB design layout files, you can use Allegro Free Physical Viewer, which can be downloaded from the Cadence website Allegro Download page:

[www.cadence.com/products/pcb/Pages/Downloads.aspx](http://www.cadence.com/products/pcb/Pages/Downloads.aspx).

The layers are arranged in the following order:

Layer1: Top Signal

Layer2: GND1

Layer3: PWR1

Layer4: PWR2

Layer5: GND2

Layer6: Bottom Signal

[Figure 5-1](#) shows the stack-up:

Layer	Etch	Via	Pin	Drc	All
Conductors	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Planes	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Top	<input checked="" type="checkbox"/>				
Gnd1	<input type="checkbox"/>				
Pwr1	<input type="checkbox"/>				
Pwr2	<input type="checkbox"/>

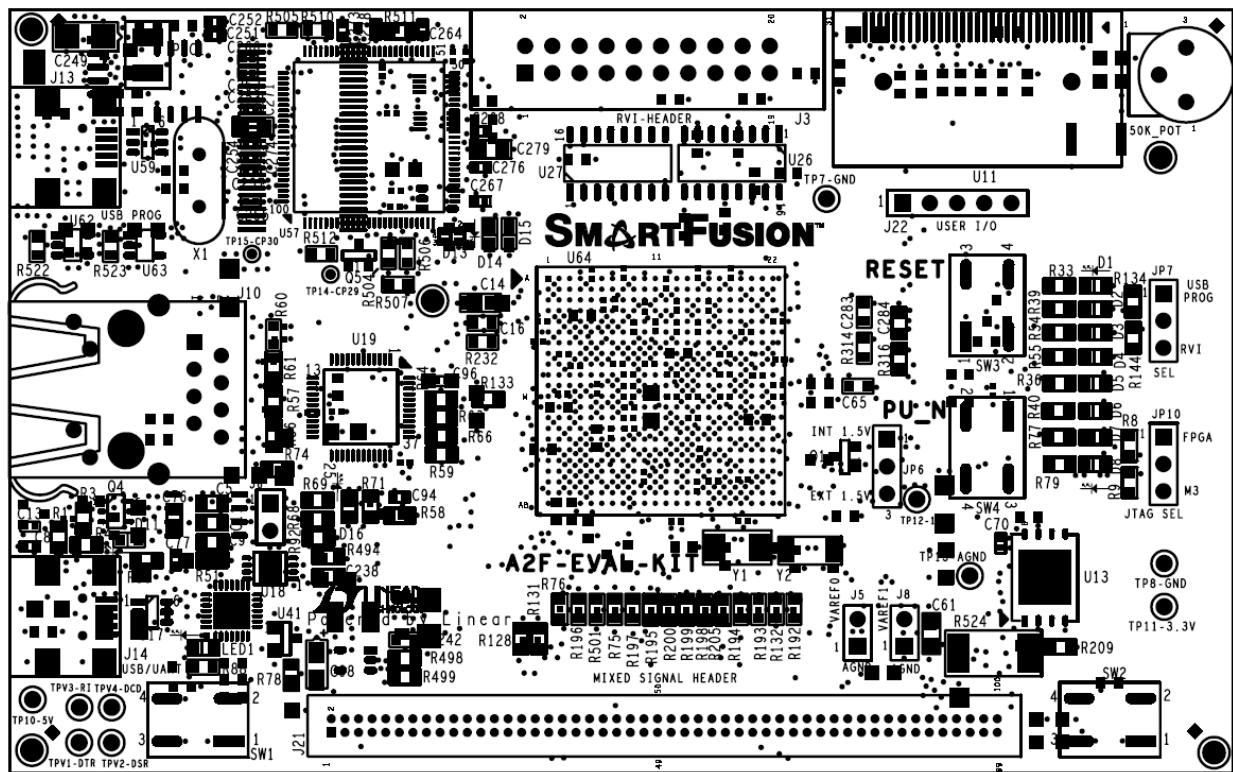

Figure 5-2 • A2F-EVAL-KIT Top Silk-Screen

## 6 – Manufacturing Test

### A2F-EVAL-KIT Board Testing Procedures

This chapter defines and describes the specific A2F-EVAL-KIT board testing procedures. Instructions for running the ACTEL A2F-EVAL-KIT board tests and the steps needed to set up the test environment are outlined in the following sections.

Associated files for this procedure can be downloaded from the Actel website: [www.actel.com/download/rsc/?f=A2F\\_EVAL\\_KIT\\_Mfg\\_PF](http://www.actel.com/download/rsc/?f=A2F_EVAL_KIT_Mfg_PF).

#### Jumper Settings for the Board Test

Table 1 lists all the jumpers that need to be set on the board for performing the tests. In case any of the tests in the following section do not work as expected, double-check Table 1.

**Table 1 • Manufacturing Test Jumper Settings**

Jumper	Pin (From)	Pin (To)
JP6	2	3
JP7	1	2
JP10	1	2

#### Installing the A2F-EVAL-KIT Board USB Serial Driver

1. Download and extract all the files stored in the **CP210x\_driver.zip** archive from the Actel website.
2. Double-click on the file named **CP210x\_VCP\_Win2K\_XP\_S2K3.exe**.
3. Choose the Install option in the Install Wizard and select Yes for the licensing agreement.
4. Restart the computer on which the driver was installed. After restart, the driver can be used to communicate with A2F-EVAL-KIT board.

#### Hooking up the Board and UART Cable

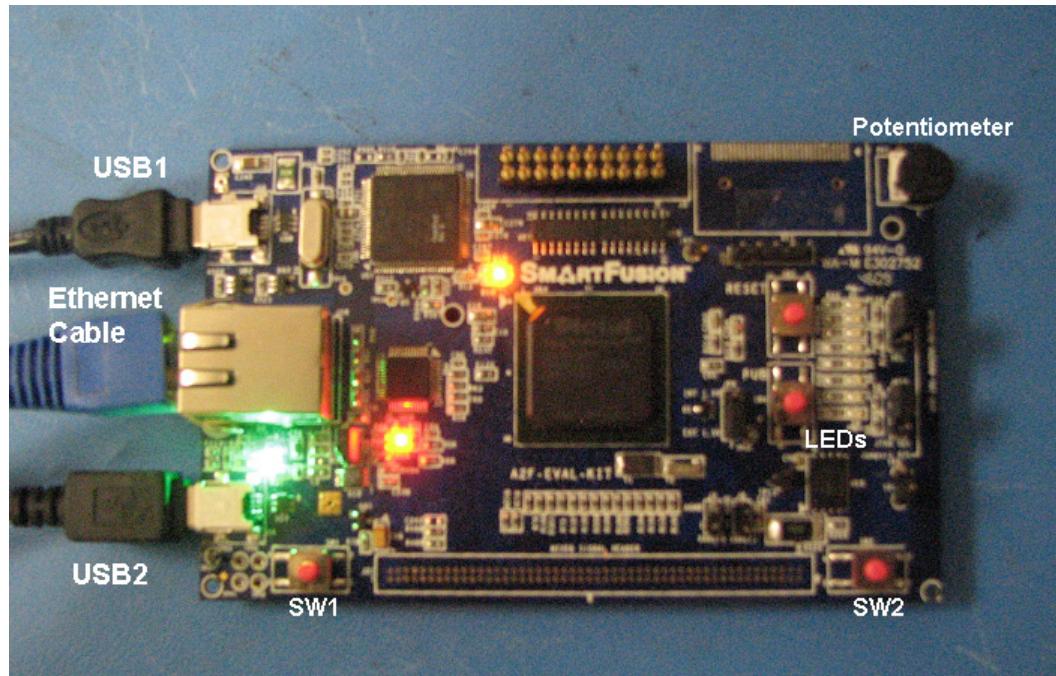

Connect one end of USB mini B cable to the USB connection, J14 (labeled as USB2 in [Figure 1 on page 46](#)) on the A2F-EVAL-KIT board. Connect the other end of the USB cable to the PC you will use for testing.

The board receives power from USB. LED1 lights up, indicating the board is powered up. The D11 LED also lights up, indicating UART link establishment.

#### Hooking Up the Board and Ethernet Cable

Connect an Ethernet cable from the local area network to J10, the A2F-EVAL-KIT Ethernet jack.

**Note:** For the board Ethernet test to pass, the local network must be running a DHCP server that assigns an IP address to the web server on the board. Network firewalls must not block the web server.

*Figure 1 • Board Manufacturing Test Setup*

### **Hooking up the A2F-EVAL-KIT Board Built-in Programmer to PC**

Connect the second mini USB cable to connection J13 on the board (labeled USB1 in Figure 1). Plug in the second side of the cable to the PC USB port. This establishes connection to the built-in programming circuit (FlashPro3) on the board, programming the A2F-EVAL-KIT board (SmartFusion device).

1. Open the FlashPro programming software (Figure 2).

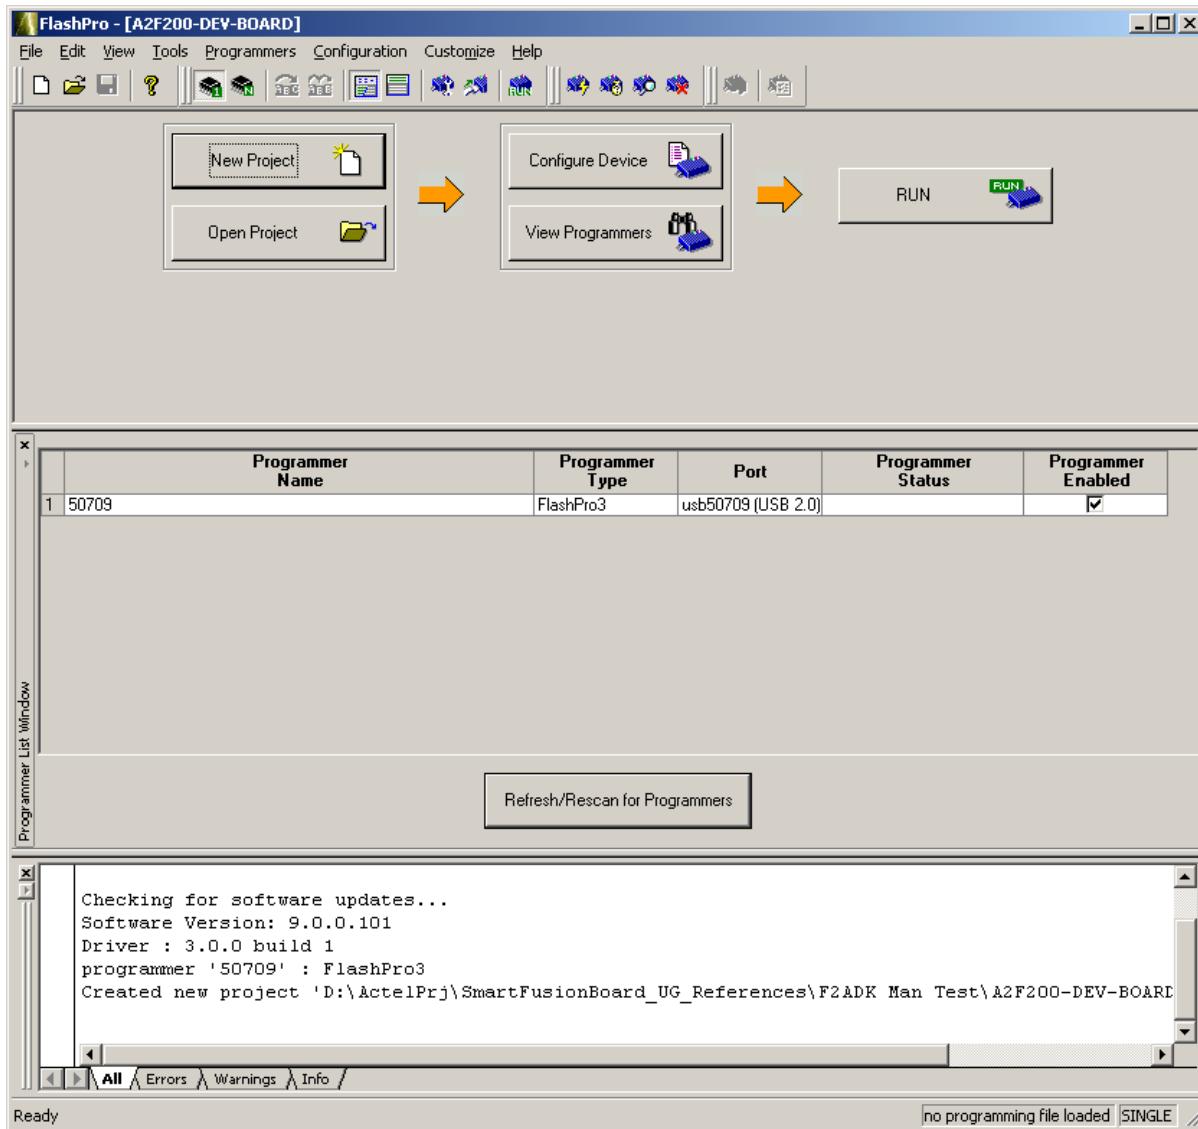

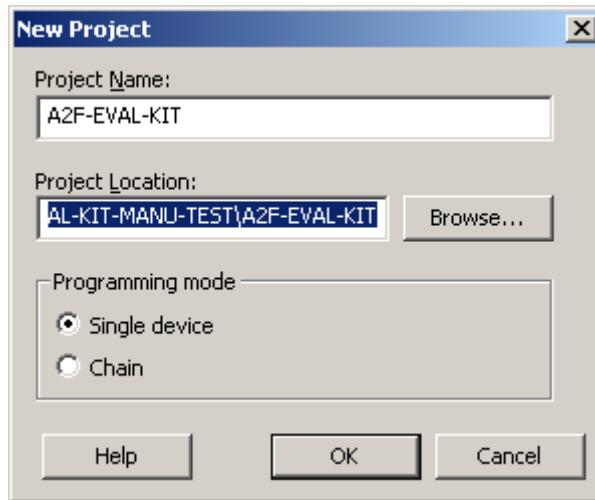

Figure 2 • FlashPro New Project Setup

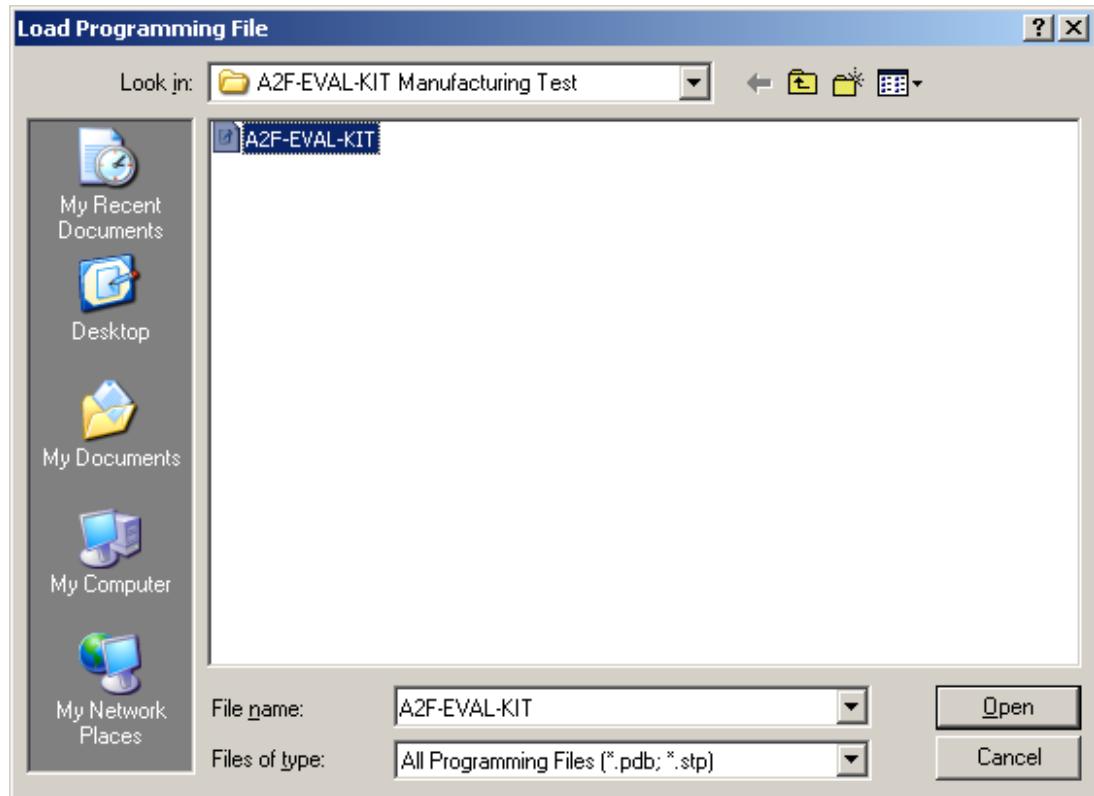

2. Create a new programming project (Figure 3).

**Figure 3 • New Project Creation**

3. Select the option **Single Device** when choosing the programming mode
4. Click the **Configure Programmer** Button. This makes the load existing programming file button available.

5. Browse the PC file system to find the A2F-EVAL-KIT.stp programming file. Click **Open** to select the A2F-EVAL-KIT.stp file (Figure 4).

**Figure 4 • Selecting Manufacturing Test STAPL File**

6. Click the **Program** button to program the A2F-EVAL-KIT board.

## Setting Up the Test Terminal

1. Open the Windows start menu. Select All > Programs > Accessories > Communications and select the HyperTerminal program (Figure 5). This opens HyperTerminal.

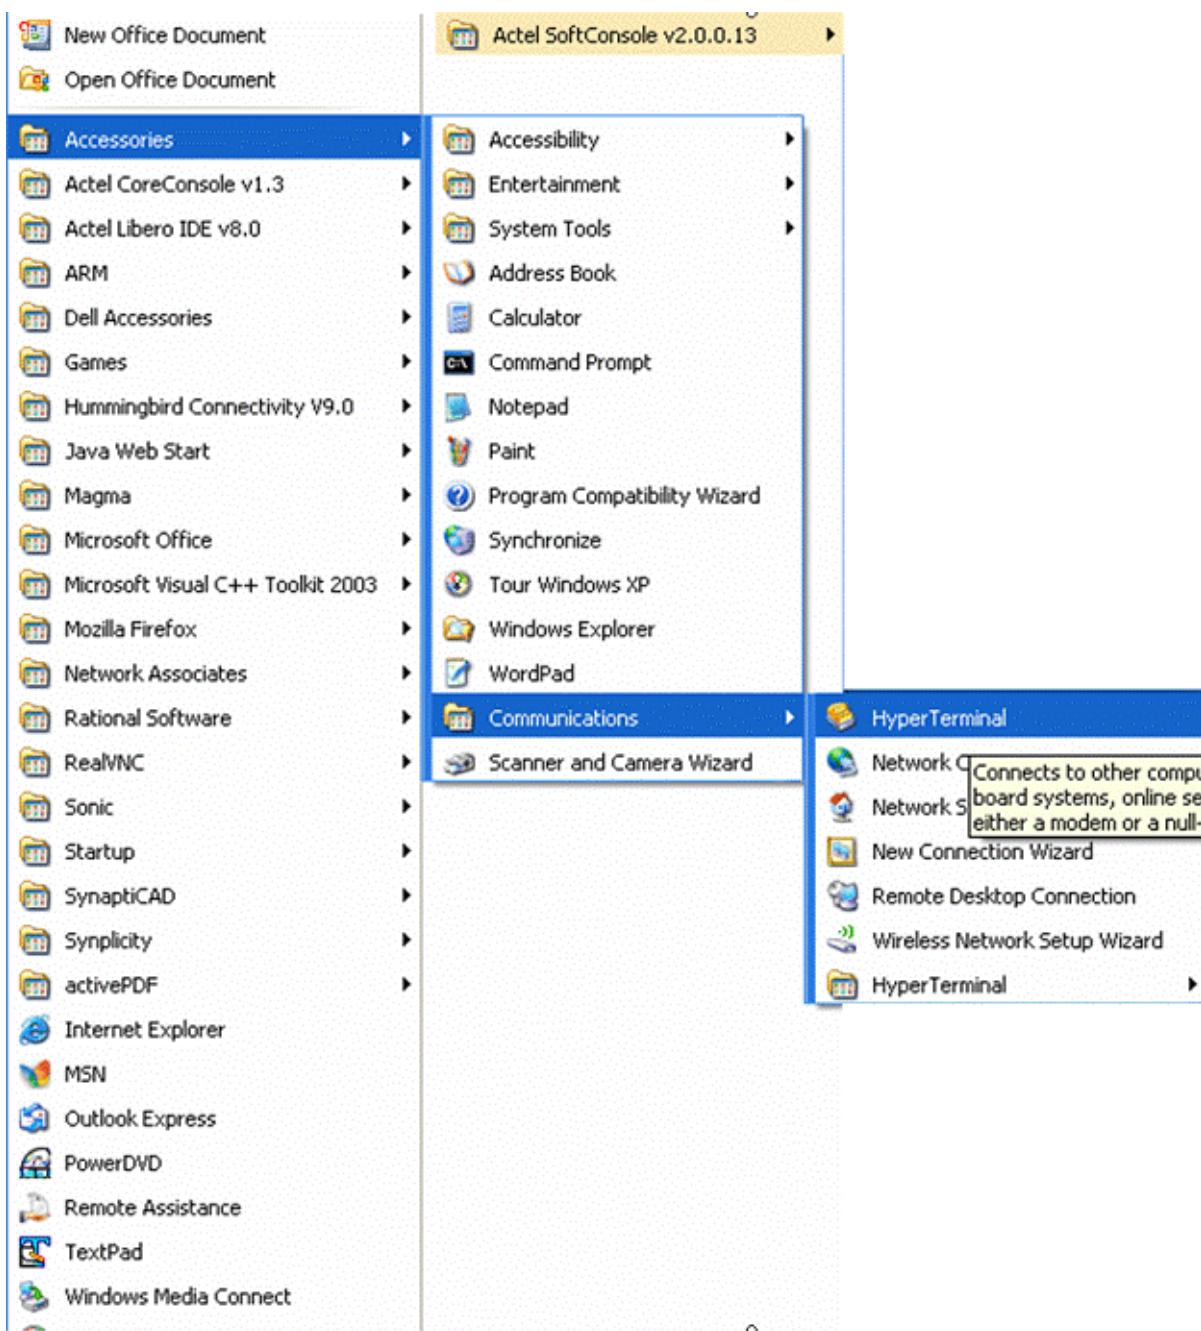

Figure 5 • HyperTerminal Program Setup

The Connection Description window will open (Figure 6). Type in A2F-EVAL-KIT as the name of the new HyperTerminal session and click the **OK** button.

**Figure 6 • HyperTerminal Setup**

2. The Connect To window will open. Select the COM4 serial connection (Figure 7).

**Figure 7 • HyperTerminal Port Selection**

3. The COM4 Properties window appears. Select the following settings (Figure 8):

Bits per second = 19200  
Data bits = 8  
Parity = None  
Stop bits = 1  
Flow Control = None.

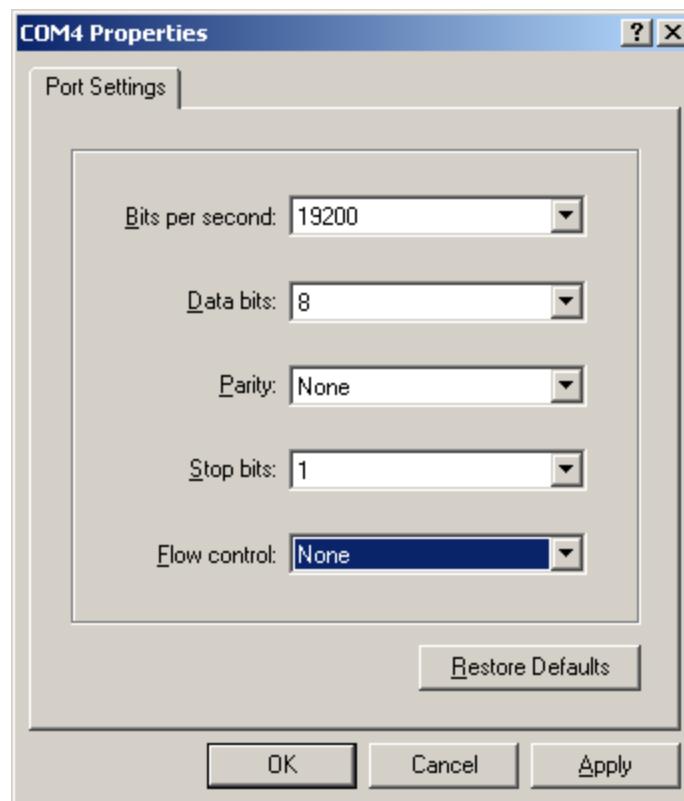

Figure 8 • HyperTerminal Port Settings

4. Select **File > Properties** in the HyperTerminal window. Choose the **Settings** tab (Figure 9).

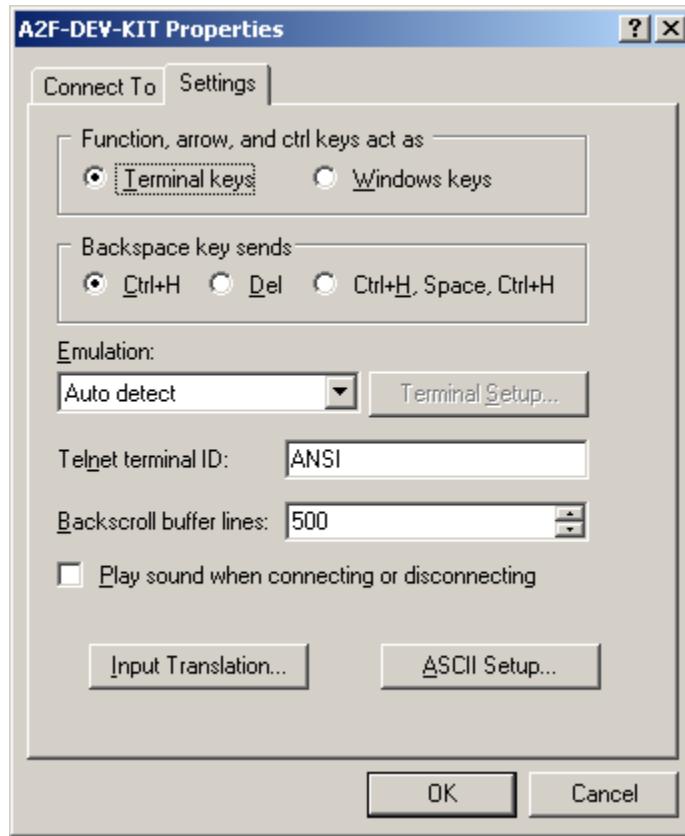

Figure 9 • HyperTerminal Properties

5. Click the ASCII Setup button. Select the check box labeled **Append line feeds to incoming line ends** (Figure 10).

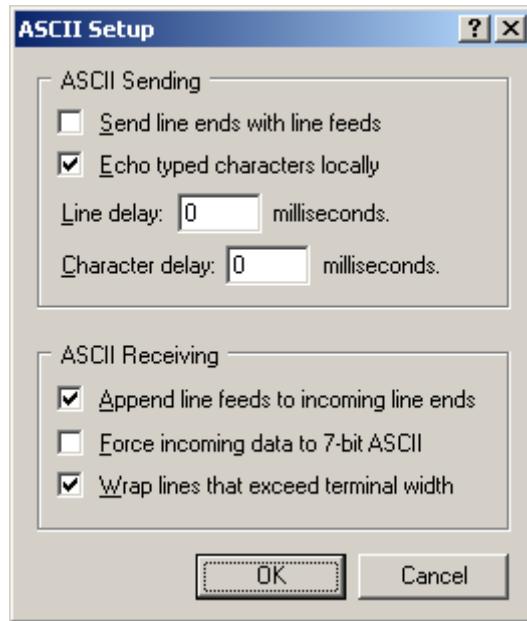

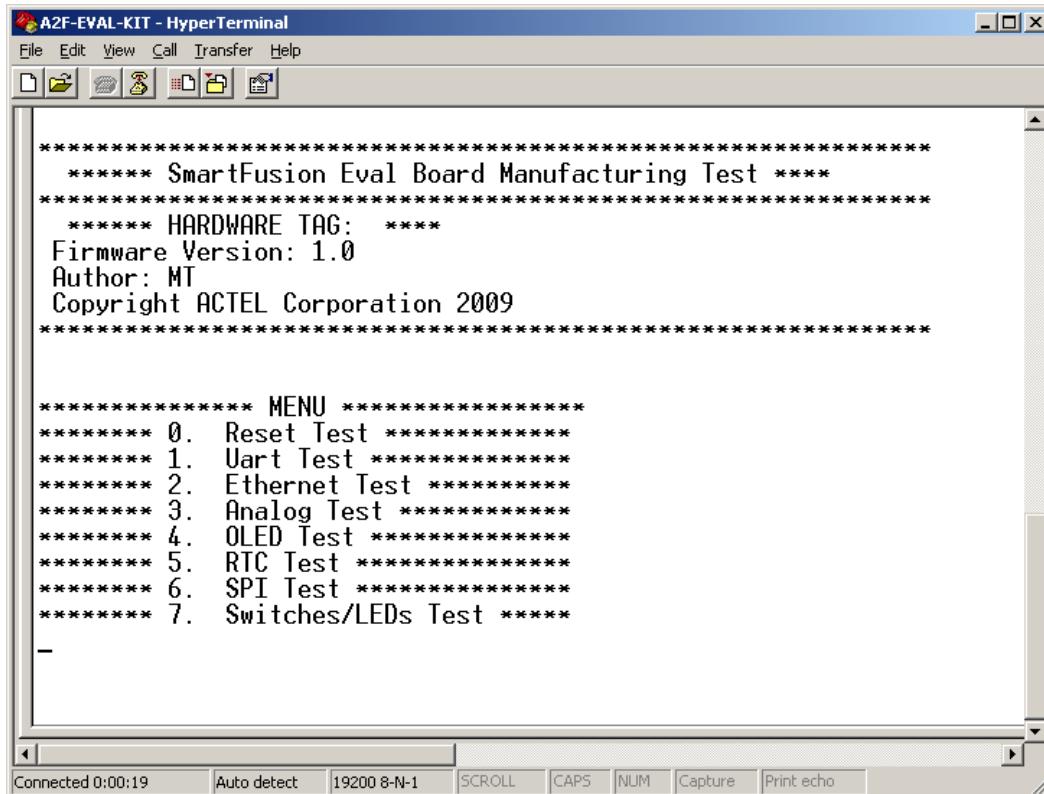

Figure 10 • ASCII Character Settings

## Running the A2F-EVAL-KIT Board Test

Press the button labeled **RESET** (SW3) on the A2F-EVAL-KIT board to start the test program.

1. The menu shown in [Figure 11](#) will appear on the terminal.

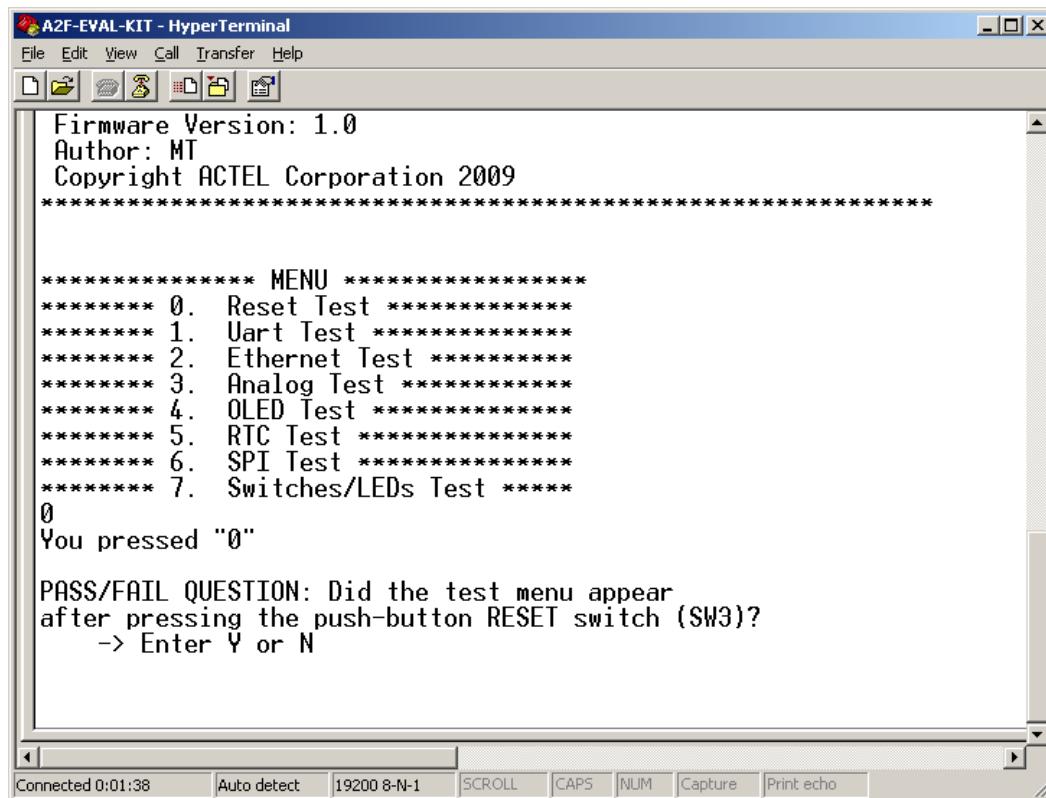

**Figure 11 • Manufacturing Test Menu**

**Note:** If this message does not appear, try pressing button SW8 again. If the above message still does not appear, refer to the ["Setting Up the Test Terminal"](#) section on page 50 and check to see that the terminal has been set up correctly.

## RESET Test

1. Enter **0** into the terminal to begin the reset test.  
The resulting display should be similar to [Figure 12](#).

**Figure 12 • Reset Test**

2. If the menu appears correct, enter the character Y into the terminal (Figure 13).

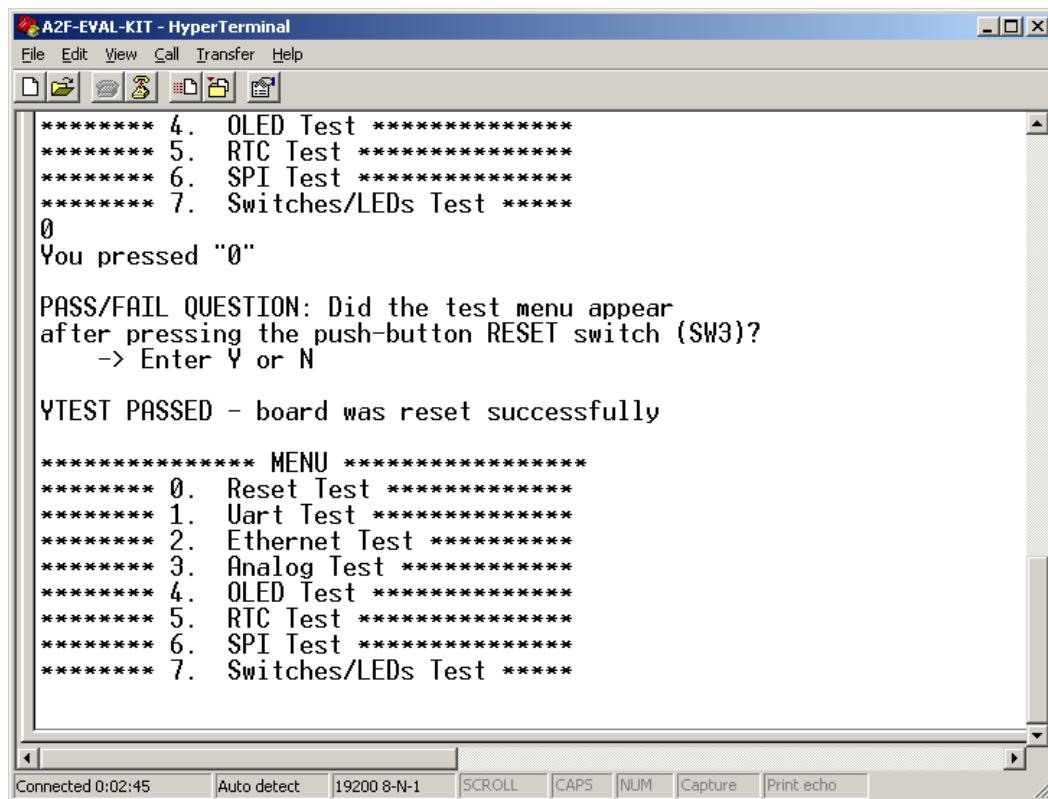

Figure 13 • Reset Test Result

## UART Test

1. Enter 1 into the terminal to begin the UART test (Figure 14).

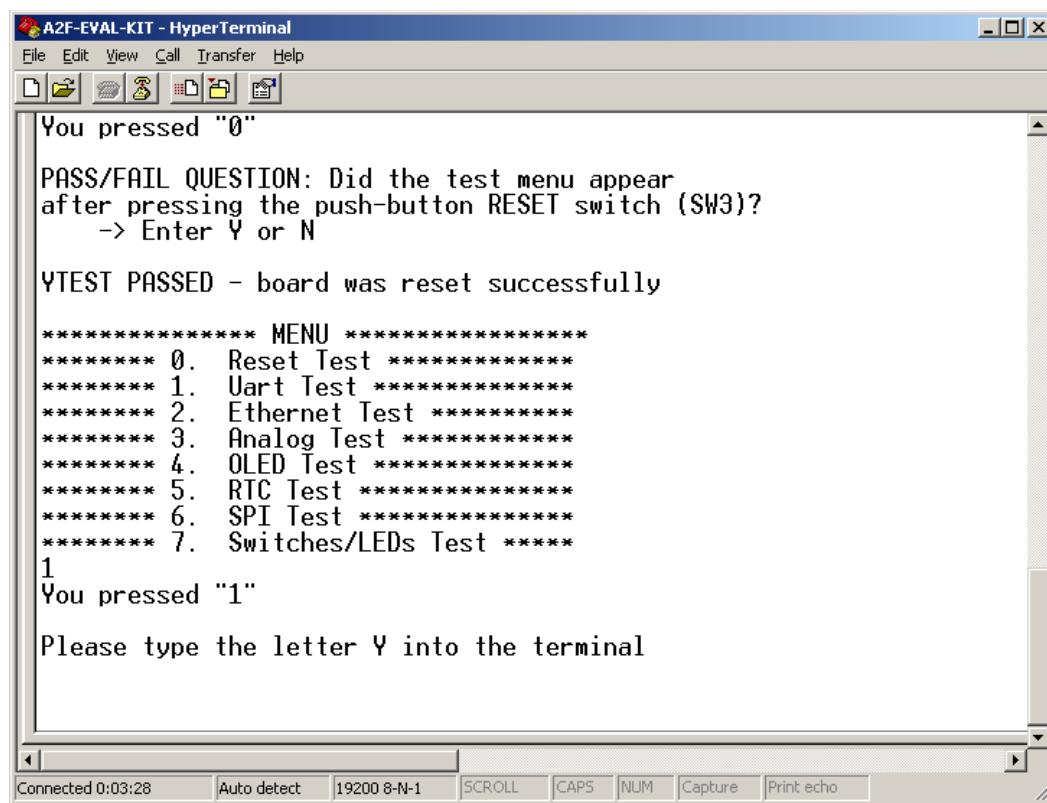

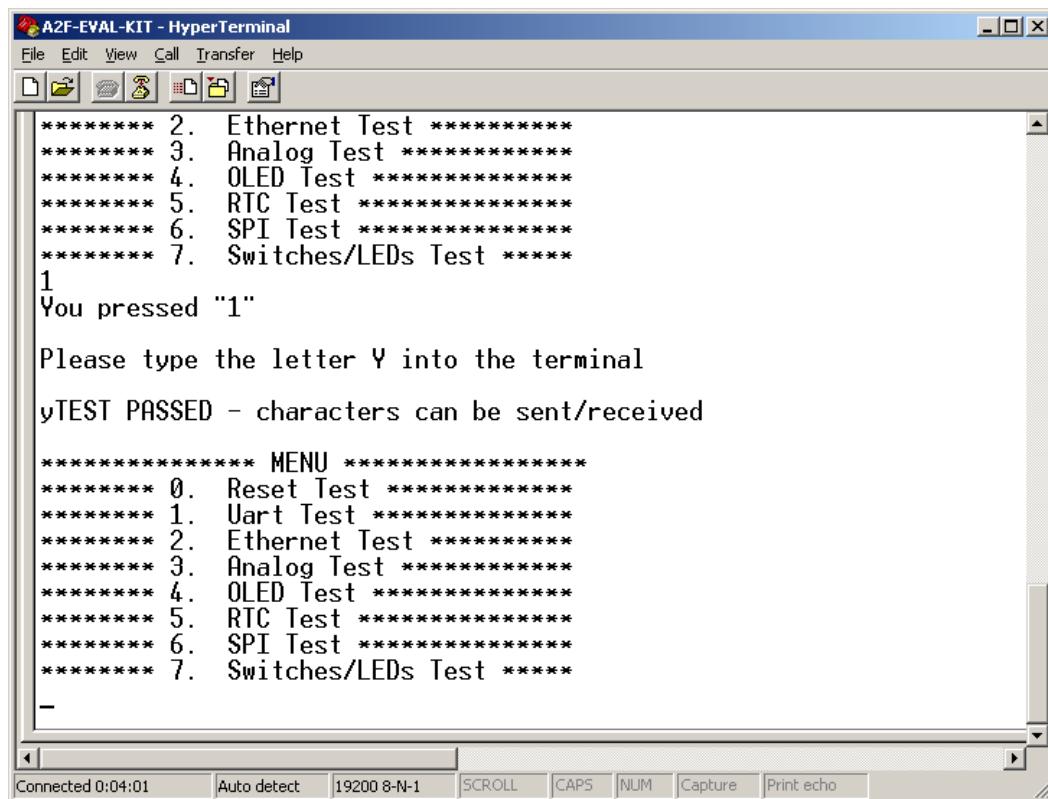

Figure 14 • UART Test

2. Type the character Y into the terminal. The screen shown in [Figure 15](#) should appear.

**Figure 15 • UART Test Result**

## Ethernet Test

1. Enter 2 into the terminal to begin the Ethernet test. The screens shown in [Figure 16](#) and [Figure 17](#) on page 61 should appear.

The screenshot shows a HyperTerminal window titled "A2F-EVAL-KIT - HyperTerminal". The menu bar includes File, Edit, View, Call, Transfer, and Help. The toolbar contains icons for copy, paste, find, and other functions. The main window displays the following text:

```
***** 7. Switches/LEDs Test *****

***** 7. Switches/LEDs Test *****

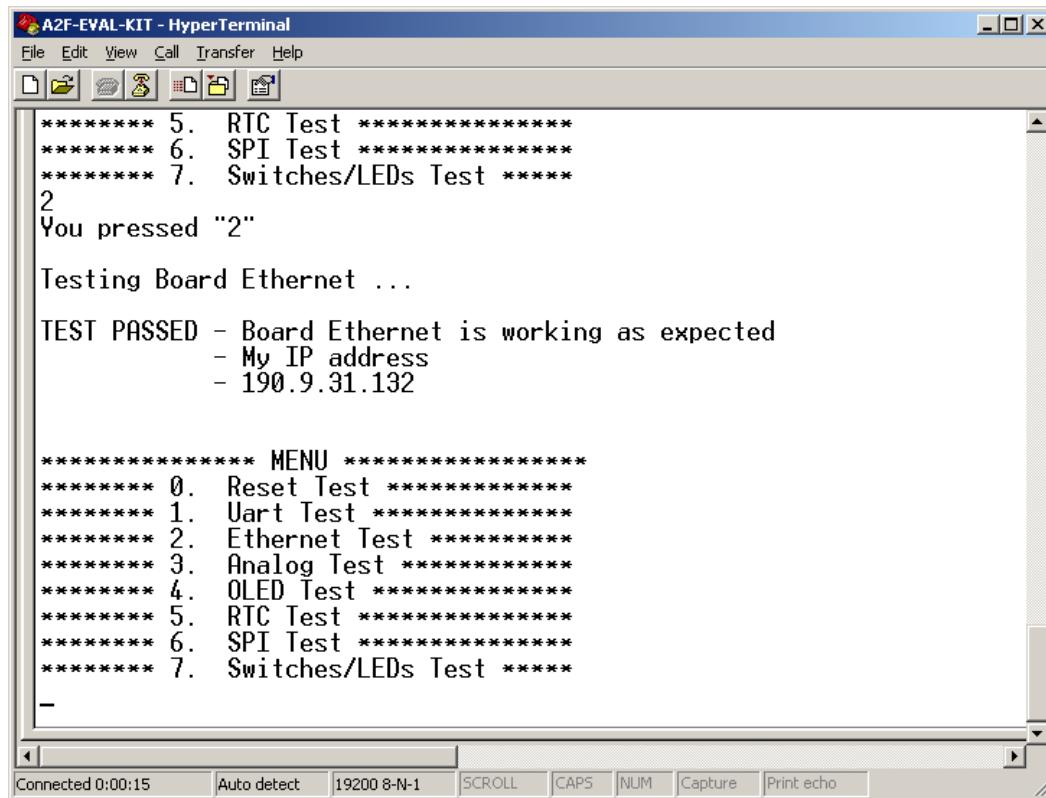

2
You pressed "2"

Testing Board Ethernet ...

-
```

The status bar at the bottom shows "Connected 0:04:24", "Auto detect", "19200 8-N-1", and various terminal control buttons like SCROLL, CAPS, NUM, Capture, and Print echo.

**Figure 16 • Ethernet Test**

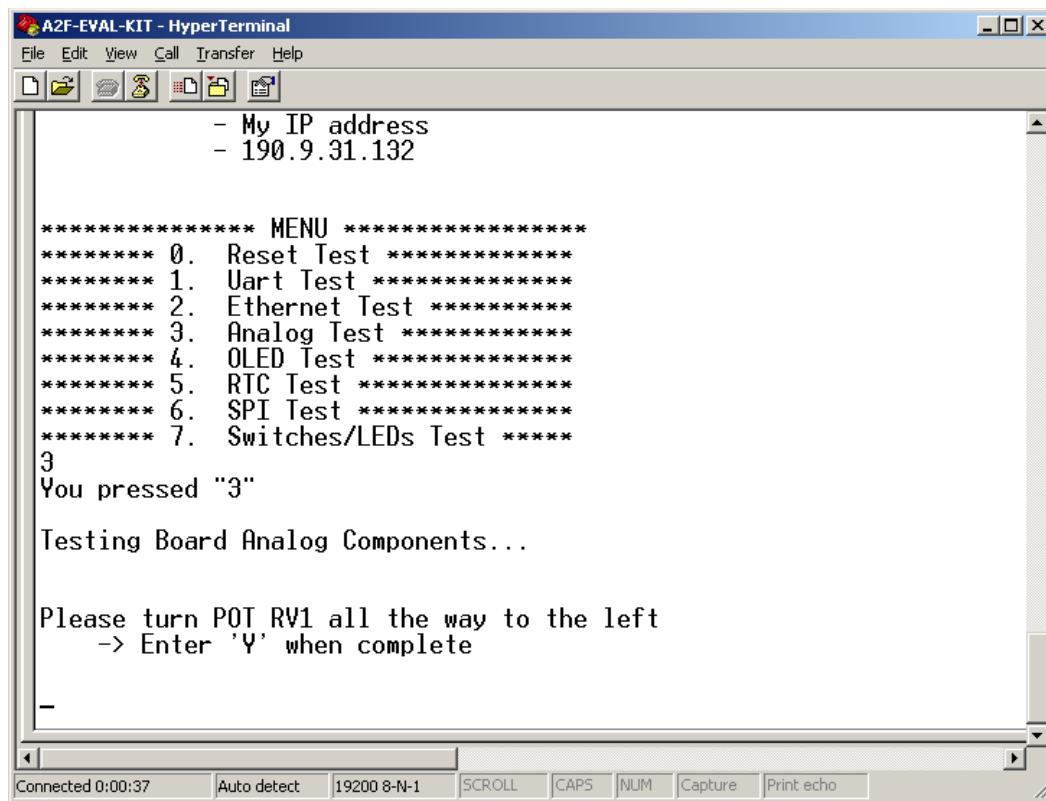

---

**Figure 17 • Ethernet Test Result**

Note: The IP address may vary in the network setup.

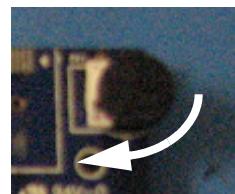

## Analog Test

1. Enter 3 into the terminal to begin the Analog test. The screen shown in [Figure 18](#) should appear.

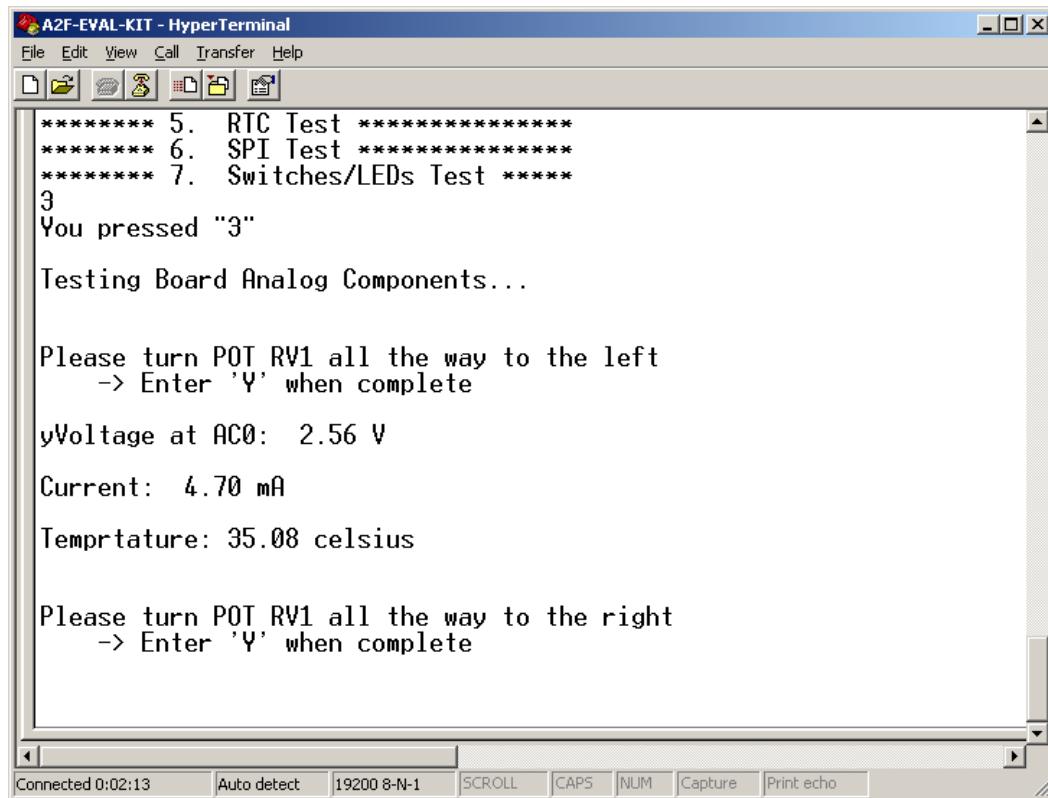

**Figure 18 • Analog Test**

2. Locate POT RV1 on the bottom, left hand corner of the board. Turn POT RV1 counter-clockwise all the way to the left, as shown in [Figure 19](#).

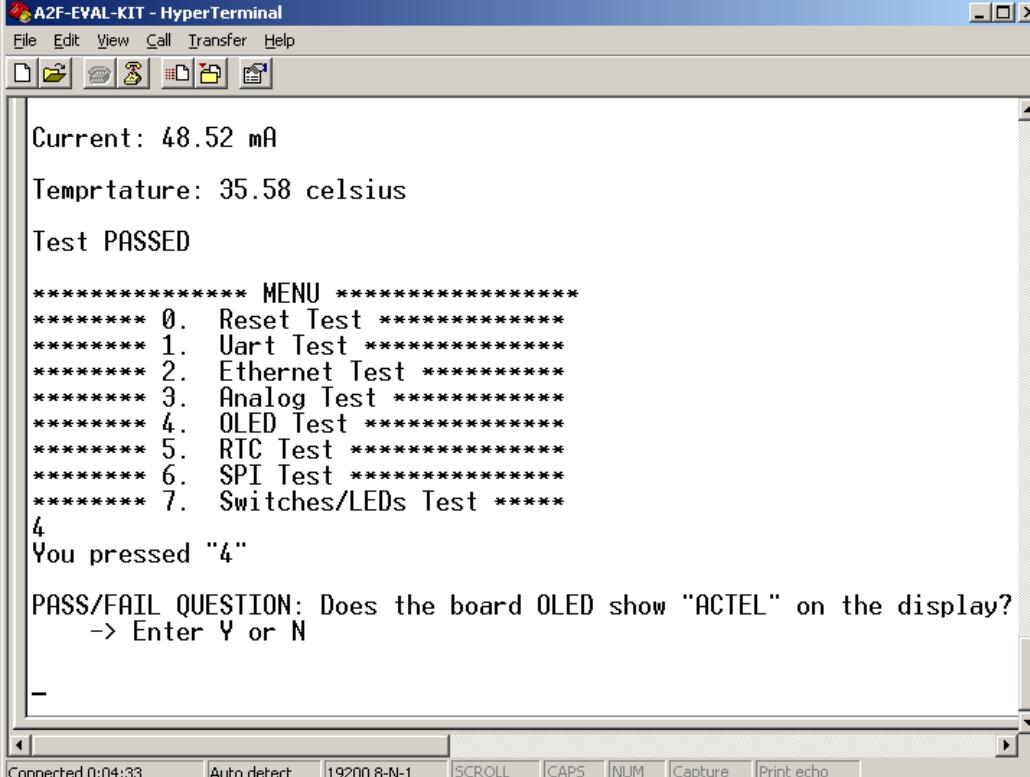

**Figure 19 • POT RV1**

---

**Figure 20 • Analog Test Starting Results**

3. Turn POT RV clockwise all the way clockwise to the right. The display on the terminal should be similar to [Figure 21](#).

PASS/FAIL QUESTION: Does the board OLED show "ACTEL" on the display?  
-> Enter Y or N

Connected 0:04:33 Auto detect 19200 8-N-1 SCROLL CAPS NUM Capture Print echo

The screenshot shows a HyperTerminal window titled "A2F-EVAL-KIT - HyperTerminal". The window displays the results of an analog test. It starts with "Current: 48.52 mA" and "Tempreature: 35.58 celsius", followed by a "Test PASSED" message. A menu is then presented with options from 0 to 7. The user has selected option 4, which is "OLED Test". A question is asked: "PASS/FAIL QUESTION: Does the board OLED show "ACTEL" on the display? -> Enter Y or N". The bottom status bar shows the connection details: Connected 0:04:33, Auto detect, 19200 8-N-1, SCROLL, CAPS, NUM, Capture, Print echo.

**Figure 21 • Analog Test Ending Results**

## OLED Test

1. Enter 4 into the terminal to begin the OLED test. The screen shown in Figure 22 will appear.

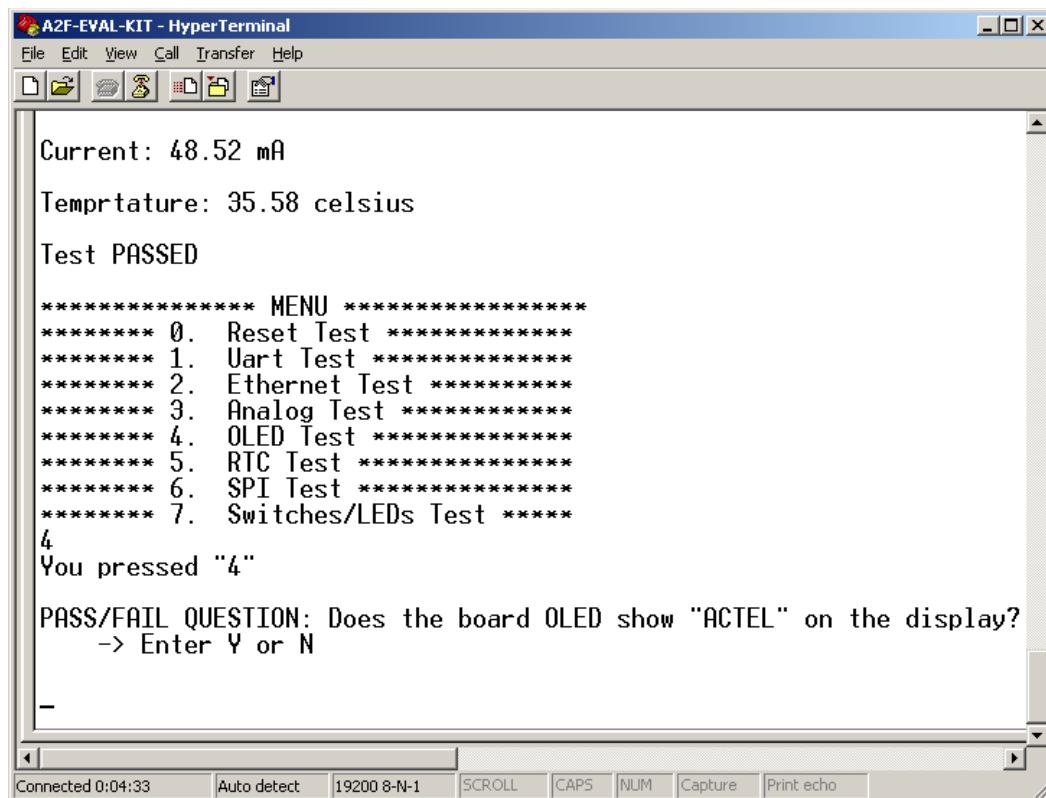

Figure 22 • OLED Test Setup

2. Check the board OLED display. If the characters ACTEL MAN TEST are displayed in the OLED, enter Y in the terminal; otherwise, enter N. If Y was entered, the screen shown in Figure 23 will be displayed.

The screenshot shows a window titled "A2F-EVAL-KIT - HyperTerminal". The menu bar includes File, Edit, View, Call, Transfer, and Help. The toolbar contains icons for file operations like Open, Save, Print, and Copy. The main window displays a test menu and its execution results:

```
***** 3. Analog Test *****
***** 4. OLED Test *****
***** 5. RTC Test *****
***** 6. SPI Test *****
***** 7. Switches/LEDs Test *****
4
You pressed "4"

PASS/FAIL QUESTION: Does the board OLED show "ACTEL" on the display?

***** 2. Ethernet Test *****
***** 3. Analog Test *****
***** 4. OLED Test *****
***** 5. RTC Test *****
***** 6. SPI Test *****
***** 7. Switches/LEDs Test *****
```

At the bottom of the window, there is a status bar with the following information:

Connected 0:06:34 Auto detect 19200 8-N-1 SCROLL CAPS NUM Capture Print echo

**Figure 25 • RTC Test Passed**

## SPI Test

Enter 6 into the terminal to begin the SPI test. After several seconds, the screen shown in Figure 26 should appear.

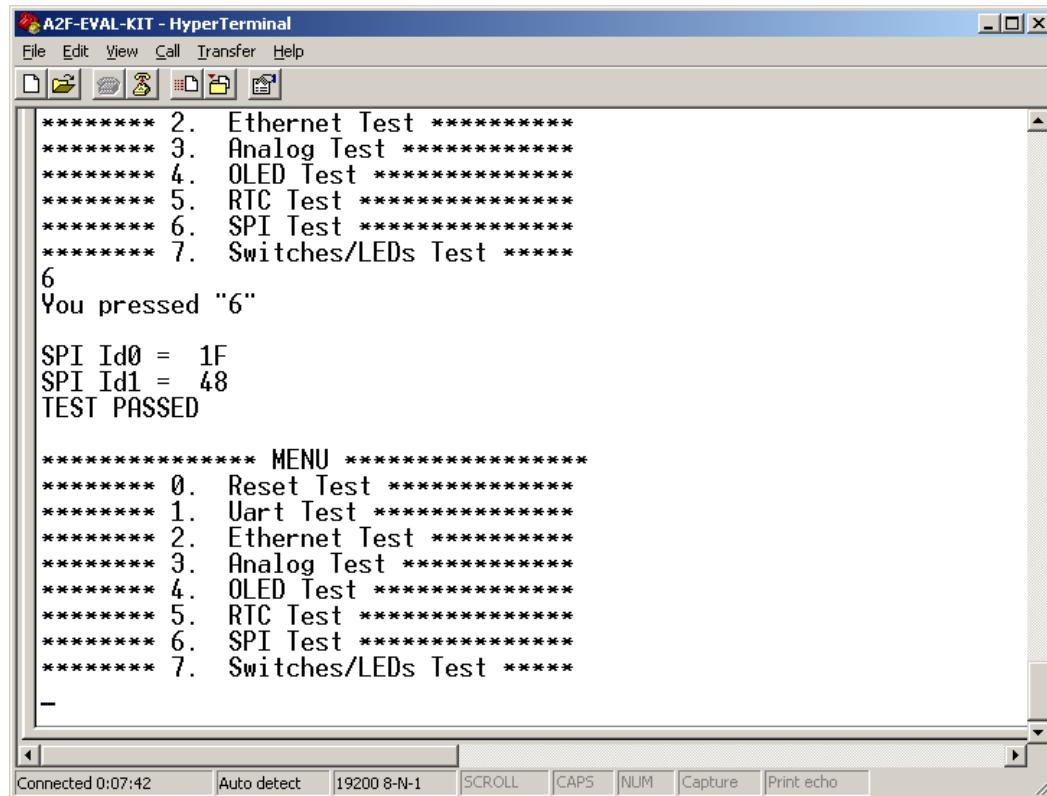

Figure 26 • SPI Test

## Switch/LED Test

1. Enter 7 into the terminal to begin the LEDs test. The screen shown in Figure 27 will appear.

The screenshot shows a HyperTerminal window titled "A2F-EVAL-KIT - HyperTerminal". The menu bar includes File, Edit, View, Call, Transfer, and Help. The toolbar contains icons for copy, paste, cut, find, and others. The main text area displays the following output:

```
You pressed "6"
SPI Id0 = 1F
SPI Id1 = 48
TEST PASSED

***** MENU *****
***** 0. Reset Test *****
***** 1. Uart Test *****
***** 2. Ethernet Test *****
***** 3. Analog Test *****
***** 4. OLED Test *****
***** 5. RTC Test *****
***** 6. SPI Test *****
***** 7. Switches/LEDs Test *****
7
You pressed "7"

Please press push buttons SW1 and SW2 and watch LEDs light up
PASS/FAIL QUESTION: Did the board LEDs light up when pushing each bu-
-> Enter Y or N

-
```

The status bar at the bottom shows "Connected 0:08:13", "Auto detect", "19200 8-N-1", and various terminal settings like SCROLL, CAPS, NUM, Capture, and Print echo.

Figure 27 • LED Test

2. Press SW2 and LEDs D1, D2, D3, D4, D5, D6, D7, and D8 must light up. When this has occurred, press Y (Figure 28).

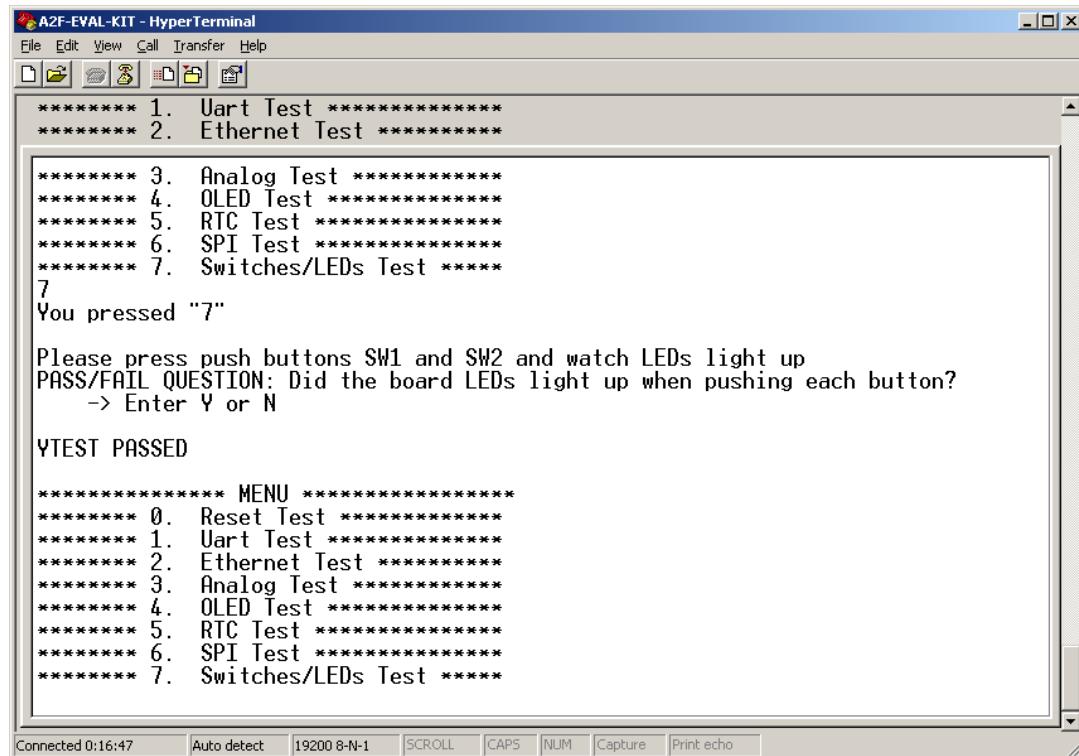

Figure 28 • Switch Test

## A2F-EVAL-KIT Board Failures

All Tests outlined in "Running the A2F-EVAL-KIT Board Test" on page 55 should result in the words TEST PASSED being printed on the terminal. If this does not happen, or the words TEST FAILED are printed, the test has failed.

If the A2F-EVAL-KIT board fails any of the tests outlined in "Running the A2F-EVAL-KIT Board Test" on page 55, the board being tested is not functional.

---

## A – List of Changes

---

The following table lists critical changes that were made in the current version of the chapter.

Previous Version	Changes in Current Version* (50200209-0)	Page
50200209-0/2.10	The "Mixed-Signal Header" section was added.	3-26

*Note:* \*The part number is located on the last page of the document. The digits following the slash indicate the month and year of publication.

## B – Product Support

---

Actel backs its products with various support services including Customer Service, a Customer Technical Support Center, a web site, an FTP site, electronic mail, and worldwide sales offices. This appendix contains information about contacting Actel and using these support services.

### Customer Service

Contact Customer Service for non-technical product support, such as product pricing, product upgrades, update information, order status, and authorization.

From Northeast and North Central U.S.A., call **650.318.4480**  
From Southeast and Southwest U.S.A., call **650.318.4480**  
From South Central U.S.A., call **650.318.4434**  
From Northwest U.S.A., call **650.318.4434**  
From Canada, call **650.318.4480**  
From Europe, call **650.318.4252** or +44 (0) 1276 401 500  
From Japan, call **650.318.4743**  
From the rest of the world, call **650.318.4743**  
Fax, from anywhere in the world **650.318.8044**

### Actel Customer Technical Support Center

Actel staffs its Customer Technical Support Center with highly skilled engineers who can help answer your hardware, software, and design questions. The Customer Technical Support Center spends a great deal of time creating application notes and answers to FAQs. So, before you contact us, please visit our online resources. It is very likely we have already answered your questions.

### Actel Technical Support

Visit the Actel Customer Support website ([www.actel.com/support/search/default.aspx](http://www.actel.com/support/search/default.aspx)) for more information and support. Many answers available on the searchable web resource include diagrams, illustrations, and links to other resources on the Actel web site.

### Website

You can browse a variety of technical and non-technical information on Actel's home page, at [www.actel.com](http://www.actel.com).

### Contacting the Customer Technical Support Center

Highly skilled engineers staff the Technical Support Center from 7:00 a.m. to 6:00 p.m., Pacific Time, Monday through Friday. Several ways of contacting the Center follow:

#### Email

You can communicate your technical questions to our email address and receive answers back by email, fax, or phone. Also, if you have design problems, you can email your design files to receive assistance. We constantly monitor the email account throughout the day. When sending your request to us, please be sure to include your full name, company name, and your contact information for efficient processing of your request.

The technical support email address is [tech@actel.com](mailto:tech@actel.com).

## Phone

Our Technical Support Center answers all calls. The center retrieves information, such as your name, company name, phone number and your question, and then issues a case number. The Center then forwards the information to a queue where the first available application engineer receives the data and returns your call. The phone hours are from 7:00 a.m. to 6:00 p.m., Pacific Time, Monday through Friday. The Technical Support numbers are:

650.318.4460  
800.262.1060

Customers needing assistance outside the US time zones can either contact technical support via email ([tech@actel.com](mailto:tech@actel.com)) or contact a local sales office. Sales office listings can be found at [www.actel.com/company/contact/default.aspx](http://www.actel.com/company/contact/default.aspx).
