CS 6120/CS 4120: Natural Language Processing

Instructor: Prof. Lu Wang College of Computer and Information Science Northeastern University Webpage: www.ccs.neu.edu/home/luwang

Time and Location

• Time: Mondays and Wednesdays, 2:50 pm - 4:30 pm • Location: Churchill Hall 101

Course Webpage

- <u>http://www.ccs.neu.edu/home/luwang/courses/cs6120_fa2019/cs61</u>
 <u>20_fa2019.html</u>
 - Slides, schedule for lectures and quizzes, exams, assignments (and due dates)
- You can also go to the instructor's web page and find it from there: http://www.

Prerequisites

- Programming
- Being able to write code in some programming languages (e.g. Python, Java, C/C++, Matlab) proficiently
- Courses
 Algorithms
- Probability and statistics
- Linear algebra (optional but highly recommended)
- Supervised machine learning (also optional but highly recommended)

Prerequisites

- · Quiz 0 (next lecture):
 - 20 simple questions, True or False (relevant to probability, statistics, and linear algebra)
 - The purpose of this quiz is to indicate the expected background of students.
 - 80% of the questions should be easy to answer.
 Not counted in your final score!

Textbook and References

- Main textbook
- Dan Jurafsky and James H. Martin, "Speech and Language Processing, 2nd Edition", Prentice Hall, 2009. • We will use some material from 3rd edition (for the available part).

Other reference

- Chris Manning and Hinrich Schutze, "Foundations of Statistical Natural Language Processing", MIT Press, 1999
- Machine learning textbooks:
- Christopher M. Bishop, "Pattern Recognition and Machine Learning", Springer, 2006.
- Tom Mitchell, "Machine Learning", McGraw Hill, 1997.

Topics of the Course (tentatively)

- Language Modeling
- Part-of-Speech Tagging
- Text Categorization: Word Sense Disambiguation, Named Entity Recognition Syntax: Formal Grammars of English, Syntactic Parsing, Statistical Parsing, Dependency Parsing
- Semantics: Vector-Space, Lexical Semantics, Semantics with Dense Vectors
- Information Extraction
- Question Answering
- Machine Translation
- Discourse Analysis
- Summarization
- Sentiment Analysis, Opinion Mining
- Dialog Systems and Chatbots

The Goal

- Study fundamental tasks in NLP
- Learn some classic and state-of-the-art techniques
- · Acquire hands-on skills for solving NLP problems · Even some research experience!

Grading

- Assignment (30%)
- 2 assignments, 15% for each
- Both will be out early in the semester
- Quiz (5%)
- 8 in-class tests, 1% for each (three lowest scores are dropped), no make-up
- Prelim (12%)
- Final Exam (25%)
- Project (25%)
- Participation (3%)
 - Classes: attendance, ask and answer questions, participate in discussions...
 - Piazza: help your peers, address questions...

Grading

- Assignment (30%)
- 2 assignments, 15% for each
- Both will be out early in the semester
- Quiz (5%)
- 8 in-class tests, 1% for each (three lowest scores are dropped), no make-up
- Prelim (12%)
 Final Exam (25%)
 Exams will be different for students registered in CS 6120 and CS 4120.
- Project (25%)
- Participation (3%)
- Classes: attendance, ask and answer questions, participate in discussions...
- Piazza: help your peers, address questions...

Prelim and Final Exam

- Open book
- Prelim
- Nov 6, same time and location as lectures
- Final exam
 - Time and location: TBD (last week or the week of Dec 11)
- Do not make travel plans during exam weeks before the information is finalized.

Course Project

- An NLP-related project
- 2-3 students as a team

Course Project Grading

- The problem needs to be well-defined, useful, and practical.
 - Reasonable results and observations.
 - We encourage you to tackle a research-driven problem.
 - Something novel! A new problem
 - · New method(s) that potentially lead to better performance

Sample Projects from Previous Offering

Some examples from current course website More project reports can be found at:

- More project reports can be found at:
 tht://www.cs.neu.edu/home/luwanp/courses/cs5120 fa2017.html
 html. Neural Semantic Parsing Natural Language into SQL
 Short Passages Reading Comprehension and Question Answering
 Political Promise Evaluation (PPE)
 Predicting Personality Traits using Tweets
 STORY NEXT 2.0. A TEXT INISIONT/SVIDAULZATION TOOL

- STORY NĚXT 2.0: A TÉXT INSIGHTŠ/VISUALIZATION TOOL
 Android Application for Visual QA
 Novel Summarizer and Keyword Identifier Using Text Rank with Sentence Farm Detection
 Paraphrase Generation
 Hashtag Similarity based on Tweet Text
 Stance Detection for the Fake News Challenge
 Machine Comprehension Using match-ISTM and Answer-Pointer
 Online Abuse Detection
 Plagiarism Detection Using FP-Growth Algorithm
 An Examination of Influential Framing of Controversial Topics on Twitter

- Neural Semantic Parsing Natural Language into SQL
- Enterprise stores data in structured format
- Skilled workforce required to extract knowledge
- What if anyone could ask questions in natural language from structured text?

Table: CFLDraft					Question:
Pick #	CFL Team	Player	Position	College	How many CFL teams are from York College
27	Hamilton Tiger-Cats	Connor Healy	DB	Wilfrid Laurier	SQL:
28	Calgary Stampeders	Anthony Forgone	OL	York	SELECT COUNT CFL Team FROM CFLDraft WHERE College = "York"
29	Ottawa Renegades	L.P. Ladouceur	DT	California	
30	Toronto Argonauts	Frank Hoffman	DL	York	Result:
		.ü	a.	a.	2

An example in WikiSQL. The inputs consist of a table and a question. The outputs consist of a ground truth SQL query and the corresponding result from execution.

Short Passages Reading Comprehension and Question Answering

Answer a simple question by reading a short passage.

- Simple question: Factoid QA, < 30 words.
- Short passage: < 300 words.
- The answer is directly given as a range of the passage.
- → INPUT: A passage, a question.
- → OUTPUT: a range of the passage.

John went to school at 9AM and ate a sandwich for lunch and came back home at 5PM. ...

What did John have for lunch?

In 1950, Alan Turing published an article titled "Computing Machinery and Intelligence" which proposed what is now called the Turing test as a criterion of intelligence...

Who published "Computing Machinery and Intelligence"?

Jargon Detection and Explanation

- · Making content accessible to common audience
- Find Jargon
- :
- Define Jargon Insert definition into text

Detection and Interpretation of English Puns

- Puns are a class of language constructs, in which lexical-semantic ambiguity is a deliberate effect of the communication act.
- For example, "I used to be a banker but I lost interest".

More Project Samples

- Stanford NLP class http://web.stanford.edu/class/cs224n
 Notice its focus on deep learning

 - Your project can use any machine learning techniques on a natural language processing problem, and shouldn't be limited to deep learning only

Course Project Grading

- You are encouraged to talk to the instructor and/or TAs on project topics!
- How to find teammates?
 - Talk to your classmates and see if you share interests! Post on piazza with your background (programming language and skills) and potential project ideas

Course Project Grading

- Three reports
- One-page proposal (3%), due on Sep 30 at 11:59pm.
 Progress, with code (7%)
 Final, with code (10%)

- One presentation • In class (5%)

Audience Award

- Bonus points!
 - All teams vote for their favorite project(s) after presentation. The team gets the most votes will be awarded with 1%
 - bonus point!

Submission and Late Policy

- Programming language
 Python (encouraged), Java, C/C++
- All submissions are in electronic format. · Due on blackboard.

Submission and Late Policy

- Assignment or report turned in late will be charged 20 points (out of 100 points) off for each late day (i.e. 24 hours).
- Each student has a budget of 5 days in total throughout the semester before a late penalty is applied.
- Late days are not applicable to final presentation.
- Each group member is charged with the same number of late days, if any, for their submission.
- You will only see the original grades on blackboard.

How to find us?

All materials, including slides, assignments, sample reports, etc, can be found on the course webpage: ng/courses/cs6120_fa2019/cs6120_fa2019.htm

Office hours

- Prof. Lu Wang: Mondays, from 1:30pm to 2:30pm, or by appointment, Rm 911 at 177 Huntington Ave. Note: to attend OH at 177, you'll need to
 Put down your name on Piaza by 1pm that Monday (Because I need to enter your name in the guest system!)
 Bring your photo ID and check in at the front desk when you come in
- TA Eva Sharma, TBD
 TA Nikhil Badugu, TBD
- · All OH starts in the week of September 9th.
- Piazza
 - <u>http://piazza.com/northeastern/fall2019/cs4120cs6120</u>, please sign up.
 All course relevant questions should go here! Also is the best way to reach the instructor and TAs.

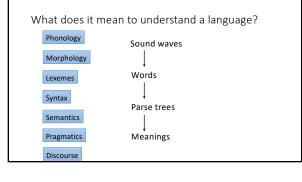

What is Natural Language Processing?

What is Natural Language Processing?

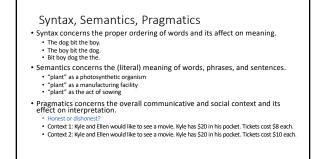

- · Allowing machines to communicate with human
- Natural language understanding + natural language generation

What does it mean to understand a language? "Play some music" "Stop" "Play music by [artist]" • "Turn it up" "Volume level 6" • "Play dance music on YouTube" "Play KEXP radio on TuneIn" "Repeat that" • "What can you do?" • "Play the latest episode of Radiolab" "Pause" "Next song" "When's my first appointment tomorrow?" • "Wake me up at 6am tomorrow" "Tell me about my day" "How long will it take to get to work?"

- "What's the weather today?"

What does it n	nean to understand a language?
Phonology	7
Morphology	 Shallower Analysis
Lexemes	
Syntax	
Semantics	
Pragmatics	 Deeper Analysis
Discourse	

Syntax, Semantics, Pragmatics

- Syntax concerns the proper ordering of words and its affect on meaning.
 - The dog bit the boy.
 The boy bit the dog.
 Bit boy dog the the.
- Semantics concerns the (literal) meaning of words, phrases, and sentences.
 - "plant" as a photosynthetic organism
 "plant" as a manufacturing facility
 "plant" as the act of sowing
- Pragmatics concerns the overall communicative and social context and its effect on interpretation.
 - Honest or dishonest?
- Context 1: Kyle and Ellen would like to see a movie. Kyle has \$20 in his pocket. Tickets cost \$8 each.
 Context 2: Kyle and Ellen would like to see a movie. Kyle has \$20 in his pocket. Tickets cost \$10 each.
 Kyle: "I have \$8"

Where NLP is used?

Social World

- Disaster Relief
- Chatbots for Mental Health
- Detecting abusive language in online posts

Text Classification: Disaster Response

• Haiti Earthquake 2010

• Classifying SMS messages Mwen thomassin 32 nan pyron mwen ta renmen jwen yon ti dlo gras a dieu bo lakay mwen anfom se sel dlo nou bezwen

I am in Thomassin number 32, in the area named Pyron. I would like to have some water. Thank God we are fine, but we desperately need water.

Extracting Social Meaning from Language

- Uncertainty (students in tutoring)
- Annoyance (callers to dialogue systems)
- Anger (police-community interaction)
- Deception
- Emotion
- Intoxication
- Flirtation, Romantic interest

Sentiment in Restaurant Reviews

A very bad (one-star) review:

The bartender... absolutely horrible... we waited 10 min before we even got her attention... and then we had to wait 45 - FORTY FIVE! - minutes for our entrees... stalk the waitress to get the cheque... she didn't make eye contact or even break her stride to wait for a response ...

Dan Jurafsky, Victor Chahuneau, Bryan R. Routledge, and Noah A. Smith. 2014. Narrative framing of consumer sentiment in online restaurant reviews. First Monday 19:4

What is the language of bad reviews?

- Negative sentiment language horrible awful terrible bad disgusting
- Past narratives about people
- waited, didn't, was he, she, his, her,
- manager, customer, waitress, waiter
- Frequent mentions of we and us
- ... we were ignored until we flagged down a waiter to get our waitress

Why NLP is challenging?	

Ambiguity is Ubiquitous Speech Recognition

"recognize speech" vs. "wreck a nice beach"
"youth in Asia" vs. "euthanasia"

Ambiguity is Ubiquitous

 Speech Recognition "recognize speech" vs. "wreck a nice beach"
"youth in Asia" vs. "euthanasia"

 Syntactic Analysis "I ate spaghetti with chopsticks" vs. "I ate spaghetti with meatballs."

Ambiguity is Ubiquitous

Speech Recognition

- "recognize speech" vs. "wreck a nice beach"
 "youth in Asia" vs. "euthanasia"
- Syntactic Analysis
- "I ate spaghetti with chopsticks" vs. "I ate spaghetti with meatballs."
 Semantic Analysis
- "The dog is in the pen." vs. "The ink is in the pen."
 "I put the plant in the window" vs. "Ford put the plant in Mexico"

Ambiguity is Ubiquitous Speech Recognition

"recognize speech" vs. "wreck a nice beach"
"youth in Asia" vs. "euthanasia"

 Syntactic Analysis "I ate spaghetti with chopsticks" vs. "I ate spaghetti with meatballs."
Semantic Analysis

- "The dog is in the pen." vs. "The ink is in the pen."
 "I put the plant in the window" vs. "Ford put the plant in Mexico"

Topic the plant in the window vs. For put the plant
 Pragmatic Analysis
 From "The Plink Panther Strikes Again":
 Closegue: Does your dog bite?
 thore to come to perfect and the plant
 Closegue: Dowing down to per the dog! Nice doggie.
 Dog barks and bites Closesou in the hand
 Closegue: I though you said your dog did not bite!
 Hotel Clerks: That is not my dog.

Ambiguity

Find at least 6 meanings of this sentence: I made her duck

Ambiguity

Find at least 6 meanings of this sentence:

I made her duck

- · I cooked waterfowl for her benefit (to eat)
- I cooked waterfowl belonging to her
- I created the (plaster?) waterfowl she owns
- I caused her to quickly lower her head or body
- I recognized the true identity of her spy waterfowl
- I waved my magic wand and turned her into undifferentiated
- waterfowl

Ambiguity

I caused her to quickly lower her head or body Part of speech: "duck" can be a Noun or Verb I cooked waterfowl belonging to her. Part of speech: "her" is possessive pronoun ("of her") "her" is dative pronoun ("for her")

I made the (plaster) duck statue she owns

Word Meaning : "make" can mean "create" or "cook"

Ambiguity is Explosive

- Ambiguities compound to generate enormous numbers of possible interpretations.
- In English, a sentence ending in n prepositional phrases has over 2ⁿ syntactic interpretations
- "I saw the man with the telescope": 2 parses
- "I saw the man on the hill with the telescope.": 5 parses
- "I saw the man on the hill in Texas with the telescope": 14 parses
 "I saw the man on the hill in Texas with the telescope at noon.": 42 parses
- "I saw the man on the hill in Texas with the telescope at noon on Monday": 132 parses

Humor and Ambiguity

Many jokes rely on the ambiguity of language:

- Policeman to little boy: "We are looking for a thief with a bicycle." Little boy: "Wouldn't you be better using your eyes."
- Why is the teacher wearing sun-glasses. Because the class is so bright.
 Groucho Marx: One morning I shot an elephant in my pajamas. How he got
 into my pajamas, I'll never know.
 She criticized my apartment, so I knocked her flat.

- Noah took all of the animals on the ark in pairs. Except the worms, they came in apples.

Why is Language Ambiguous?

Why is Language Ambiguous?

- Having a unique linguistic expression for every possible conceptualization that could be conveyed would make language overly complex and linguistic expressions unnecessarily long.
- · Allowing resolvable ambiguity permits shorter linguistic expressions, i.e. data compression.
- Language relies on people's ability to use their knowledge and inference abilities to properly resolve ambiguities.
- · Infrequently, disambiguation fails, i.e. the compression is lossy.

More difficulties: Non-standard language

Great job @justinbieber! Were SOO PROUD of what youve accomplished! U taught us 2 #neversaynever & you yourself should never give up either

And neologisms:

- unfriend
- retweet
- bromance

Some NLP Tasks

Syntactic Tasks

Word Segmentation

- · Breaking a string of characters into a sequence of words.
- In some written languages (e.g. Chinese) words are not separated by spaces.
- Even in English, characters other than white-space can be used to separate words [e.g. , ; . - : ()]
- Examples from English URLs:
 - jumptheshark.com \Rightarrow jump the shark .com - twitter.com/realdonaldtrump \Rightarrow real donald trump .com

 - myspace.com/pluckerswingbar ⇒ myspace .com pluckers wing bar
 - ⇒ myspace .com plucker swing bar

Morphological Analysis

- Morphology is the field of linguistics that studies the internal structure of words.
 (Wikipedia)
- A morpheme is the smallest linguistic unit that has semantic meaning (Wikipedia)
- e.g. "carry", "pre", "ed", "ly", "e Morphological analysis is the task of segmenting a word into its morphemes:
 - carried ⇒ carry + ed (past tense)
 - independently ⇒ in + (depend + ent) + ly
 - Googlers ⇒ (Google + er) + s (plural)
 - unlockable \Rightarrow un + (lock + able) ? \Rightarrow (un + lock) + able ?

Part Of Speech (POS) Tagging

Annotate each word in a sentence with a part-of-speech.

• Useful for subsequent syntactic parsing and word sense disambiguation.

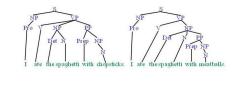

• Find all non-recursive noun phrases (NPs) and verb phrases (VPs) in a sentence.

• [NP I] [VP ate] [NP the spaghetti] [PP with] [NP meatballs].

• [NP He] [VP reckons] [NP the current account deficit] [VP will narrow] [PP to] [NP only # 1.8 billion] [PP in] [NP September]

• Produce the correct syntactic parse tree for a sentence.

Semantic Tasks

Word Sense Disambiguation (WSD)

- Words in natural language usually have a fair number of different possible meanings.
 - Ellen has a strong interest in computational linguistics.
 Ellen pays a large amount of interest on her credit card.
- For many tasks (question answering, translation), the proper sense of each ambiguous word in a sentence must be determined.
- Semantic Role Labeling (SRL)
- For each clause, determine the semantic role played by each noun phrase that is an argument to the verb. agent patient source destination instrument
 - John drove Mary from Austin to Dallas in his Toyota Prius.
 - The hammer broke the window.
- Also referred to a "case role analysis," "thematic analysis," and "shallow semantic parsing"

Semantic Parsing

- A semantic parser maps a natural-language sentence to a complete, detailed semantic representation (*logical form*).
- For many applications, the desired output is immediately executable by another program.
- Example: Mapping an English database query to Prolog: How many cities are there in the US? answer(A, count(B, (city(B), loc(B, C),
 - const(C, countryid(USA))), A))

Textual Entailment

- Determine whether one natural language sentence entails (implies) another under an ordinary interpretation.
- E.g., "A soccer game with multiple males playing. -> Some men are playing a sport."

Pragmatics/Discourse Tasks

Anaphora Resolution/Co-Reference

- Determine which phrases in a document refer to the same underlying entity.
 - John put the carrot on the plate and ate(it)
- Bush started the war in Iraq. But the president meded the consent of Congress.
- Some cases require difficult reasoning.
 Today was Jack's birthday. Penny and Janet went to the store. They were going to get presents. Janet decided to get a kite. "Don't do that," said Penny. "Jack has a kite. He will make you take it back."

More Application-driven Tasks

Information Extraction (IE)

- Identify phrases in language that refer to specific types of entities and relations in text.
- Named entity recognition is task of identifying names of people, places, organizations, etc. in text.

people organizations places

- Michael Dell is the CEO of Dell Computer Corporation and lives in Austin Texas.
 Relation extraction identifies specific relations between entities.
- Michael Dell is the CEO of Dell Computer Corporation and lives in Austin Texas.
 Michael Dell is the CEO of Dell Computer Corporation and lives in Austin Texas.

Question Answering

- Directly answer natural language questions based on information presented in a corpora of textual documents (e.g. the web). • Who is the president of United States?
 - Donald Trump
 - What is the popular of Massachusetts? 6.8 million

Text Summarization

- Produce a short summary of one or many longer document(s).
 Article: An international team of scientists studied diet and mortality in 135,335 people between 35 and 70 years old in 18 countries, following them for an average of more than seven years. Diet information depended on self-reports, and the scientists controlled for factors including age, sex, smoking, physical activity and body mass index. The study is in The Lancet. Compared with people who ate the lowest 20 percent of carbohydrates, those who ate the highest 20 percent increased risk of death. But high carbohydrate intake was not associated with cardiovascular death. ...
 - Summary: Researchers found that people who ate higher amounts of carbohydrates had a higher risk of dying than those who ate more fats.

Spoken Dialogue Systems -- Chatbots

- Q: Is it going to rain today?
- A: It will be mostly sunny. No rain is expected.

Machine Translation

 Translate a sentence from one natural language to another. • 我喜欢汉堡 → I like burgers.

Ambiguity Resolution is Required for Translation

- Syntactic and semantic ambiguities must be properly resolved for
- correct translation: • "John plays the guitar." → "John 弾 吉他"

• "John plays soccer." → "John 踢足球"

Ambiguity Resolution is Required for Translation

- Syntactic and semantic ambiguities must be properly resolved for
- correct translation:
- "John plays the guitar." → "John 弾 吉他" • "John plays soccer." → "John 踢 足球"
- An apocryphal story is that an early MT system gave the following results when translating from English to Russian and then back to English: • "The spirit is willing but the flesh is weak." → "The liquor is good but the meat
 - is spoiled."
 "Out of sight, out of mind." → "Invisible idiot."

Resolving Ambiguity

- Choosing the correct interpretation of linguistic utterances requires (commonsense) knowledge of:
 Syntax
 An agent is typically the subject of the verb

 - An agent is typically the subject of the verb
 Semantics
 Michael and Ellen are names of people
 August is the name of a month (and of a person)
 Toyot is a car company and Privis is a brand of car
 Pragmatics
 Some social norm, communicative goals
 Asking a question, expecting an answer
 World knowledge
 Credit cards require users to pay financial interest
 Agents must be animate and a hammer is not animate

State-of-the-Arts

- Learning from large amounts of text data (cf. rule-based methods) Supervised learning or unsupervised learning
- Statistical machine learning-based methods
- The probabilistic knowledge acquired allows robust processing that handles linguistic regularities as well as exceptions.
- Now with neural network-based methods mostly
