CS 6120/CS 4120: Natural Language Processing

Instructor: Prof. Lu Wang College of Computer and Information Science Northeastern University Webpage: www.ccs.neu.edu/home/luwang

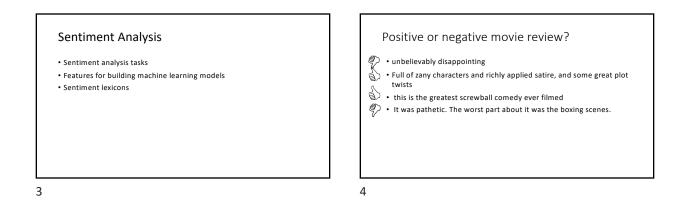

1

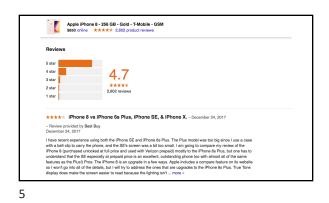

Logistics

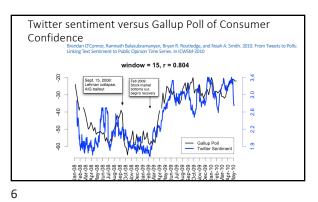

• Minor updates on assignment 2 (available on both course website and blackboard).

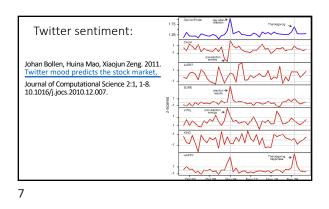

Questions 2's rules are updated.

- Prelim takes place on November 6, 2:50-4:30pm.
- Open-book
 You can take computer but no Internet access, no messaging.
- Textbooks and handouts are also fine.
- Practice questions for prelim are posted on blackboard.

Sentiment analysis has many other names

- Opinion extraction
- Opinion mining
- Sentiment mining
- Subjectivity analysis

8

Why sentiment analysis?

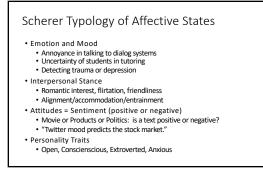

- Movie: is this review positive or negative?
- Products: what do people think about the new iPhone?
- Public sentiment: how is consumer confidence? Is despair increasing?
- Politics: what do people think about this candidate or issue?
 Pradiction: prodict election outcomes or market trends from
- Prediction: predict election outcomes or market trends from sentiment

9

Scherer Typology of Affective States

- Emotion: brief organically synchronized ... evaluation of a major event • angry, sad, joyful, fearful, ashamed, proud, elated
- Mood: diffuse non-caused low-intensity long-duration change in subjective feeling
 cheerful, gloomy, irritable, listless, depressed, buoyant
- Interpersonal stances: affective stance toward another person in a specific interaction • friendly, flirtatious, distant, cold, warm, supportive, contemptuous
- Attitudes: enduring, affectively colored beliefs, dispositions towards objects or persons
 liking, loving, hating, valuing, desiring
- Personality traits: stable personality dispositions and typical behavior tendencies • nervous, anxious, reckless, morose, hostile, jealous

10

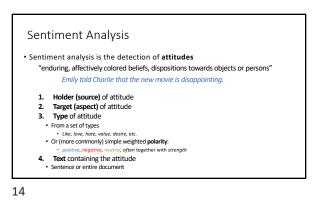

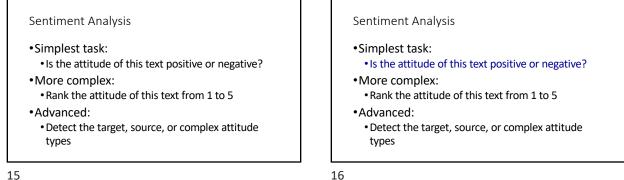

- Attitudes: enduring, affectively colored beliefs, dispositions towards objects or persons
 Iking, loving, hating, valuing, desiring
- Personality traits: stable personality dispositions and typical behavior tendencies
 nervous, anxious, reckless, morose, hostile, jealous

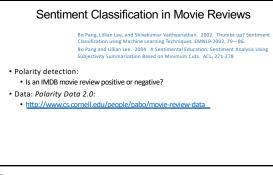

· Extraction of opinions and attitudes from text and speech • When we say "sentiment analysis" • We often mean a binary or an ordinal task • like X/ dislike X one-star to 5-stars

13

17

IMDB data in the Pang and Lee database

\checkmark

when _star wars_ came out some twenty years ago , the image of traveling throughout the stars has become a commonplace image . [...] when han solo goes light speed , the stars change to bright lines , going towards the viewer in lines that converge at an invisible point . loon

october sky offers a much simpler image—that of a single white dot , traveling horizontally across the night sky . [...]

Х " snake eyes " is the most aggravating kind of movie : the kind that shows so much potential then becomes unbelievably disappointing it's not just because this is a brian depalma film, and since he's a great director and one who's films are always greeted with at least some fanfare . and it's not even because this was a film starring nicolas cage and since he gives a brauvara performance, this film is hardly rth hic

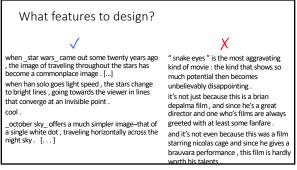

Baseline Algorithm (adapted from Pang and Lee)

- Tokenization
- Feature Extraction
- Classification using different classifiers
 - Naïve Bayes
 - MaxEnt
 - SVM

21

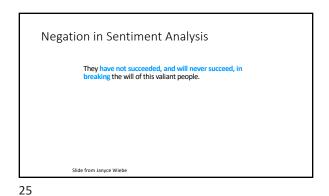

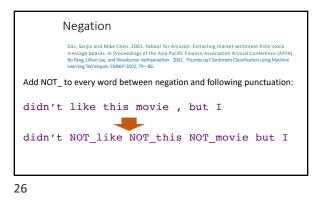

They have not succeeded, and will never succeed, in breaking the will of this valiant people.

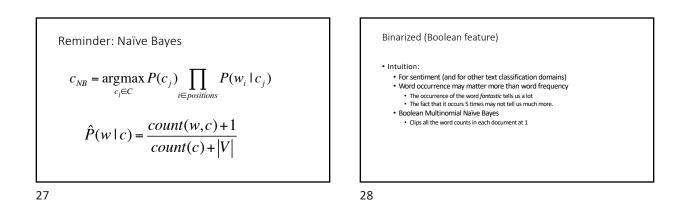

Slide from Janyce Wiebe

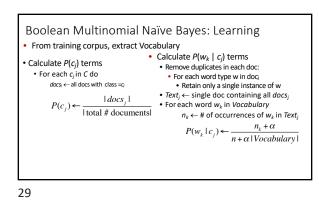

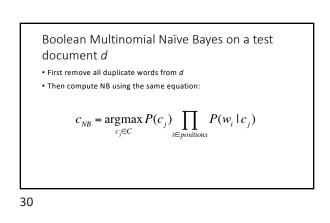

Binarized (Boolean feature) Multinomial Naïve Bayes

> B. Pang, L. Lee, and S. Vathynansthan. 2002. Thumbs up? Sentiment Classification using Machine Learning Techniques. EMNA: 22002, 79–68. doi:10.1016/j.com.2006.05.000.0016. doi:10.1016/j.com.2006.0016.0016. V. Metsch, J. Androactopopulos, G. Farnal and Andro-Spann. Titeling with Naive Bayes. – Which Naive Bayes. K.-M. Schneider: 2004. On voor fill requency information and negative evidence in Naive Bayes. Text classification. ICANB, 74:4465. J. D Rennie, E. Shih, J. Teevan, 2003. Tackling the poor assumptions of naive bayes text classifiers. IOM. 2003

• Binary seems to work better than full word counts

• Other possibility: log(freq(w))

31

Problems: What makes reviews hard to classify?

Subtlety:

- Perfume review in *Perfumes: the Guide*:
 "If you are reading this because it is your darling fragrance, please wear it at home exclusively, and tape the windows shut."
- Dorothy Parker on Katherine Hepburn
 "She runs the gamut of emotions from A to B"

32

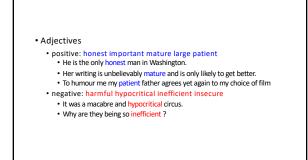

Thwarted Expectations and Ordering Effects

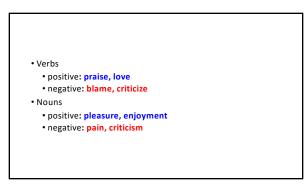

- "This film should be brilliant. It sounds like a great plot, the actors are first grade, and the supporting cast is good as well, and Stallone is attempting to deliver a good performance. However, it can't hold up."
- Well as usual Keanu Reeves is nothing special, but surprisingly, the very talented Laurence Fishbourne is not so good either, I was surprised.

33

Sentiment Analysis

- Sentiment analysis tasks
- Features for building machine learning models
 Sentiment lexicons

Phrases

• Phrases containing adjectives and adverbs positive: high intelligence, low cost
negative: little variation, many troubles

37

The General Inquirer Philip J. Stone, Dexter C Dunphy, Marshall S. Smith, Daniel M. Ogilvie. 1966. The General Inquirer: A Computer Approach to Content Analysis. MIT Press Home page: <u>http://www.wih.harvard.edu/~inquirer</u> List of Categories: <u>http://www.wih.harvard.edu/~inquirer/homecat.htm</u> Spreadsheet: http://www.wih.harvard.edu/~inguirer/inguirer/basic.xls Categories: Positiv (1915 words) and Negativ (2291 words) Strong vs Weak, Active vs Passive, Overstated versus Understated Pleasure, Pain, Virtue, Vice, Motivation, Cognitive Orientation, etc Free for Research Use 38

LIWC (Linguistic Inquiry and Word Count) Pennebaker, J.W., Booth, R.J., & Francis, M.E. (2007). Linguistic Inquiry and Word Count: LIWC 2007. Austin, TX

- Home page: http://www.liwc.net/
- 2300 words, >70 classes
- Affective Processes • negative emotion (bad, weird, hate, problem, tough)
- positive emotion (love, nice, sweet)
- Cognitive Processes
- Tentative (maybe, perhaps, guess), Inhibition (block, constraint)
- Pronouns, Negation (no, never), Quantifiers (few, many)
- Not free though!

45

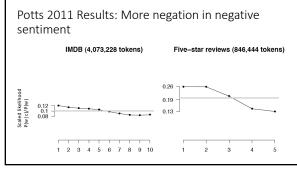

Potts, Christopher. 2011. On the negativity of negation. SALT 20, 636-659.

• Is logical negation (*no, not*) associated with negative sentiment?

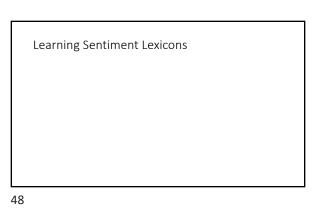

• Potts experiment:

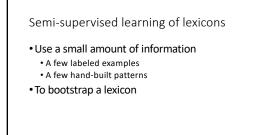

- Count negation (not, n't, no, never) in online reviews
- Regress against the review rating

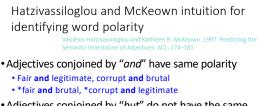

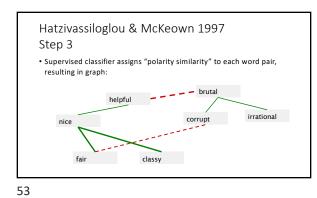

49

 Adjectives conjoined by "but" do not have the same polarity

• fair **but** brutal

Output polarity lexicon

Positive

 bold decisive disturbing generous good honest important large mature patient peaceful positive proud sound stimulating straightforward strange talented vigorous witty...

Negative

 ambiguous cautious cynical evasive harmful hypocritical inefficient insecure irrational irresponsible minor outspoken pleasant reckless risky selfish tedious unsupported vulnerable wasteful...

56

Turney Algorithm

Turney (2002): Thumbs Up or Thumbs Down? Semantic Orientation Applied to Unsupervised Classification of Reviews

- 1. Extract a phrasal lexicon from reviews
- 2. Learn polarity of each phrase
- 3. Rate a review by the average polarity of its phrases

57

First Word	Second Word	Third Word (not extracted)
11	NN or NNS	anything
RB, RBR, RBS	11	Not NN nor NNS
11	11	Not NN or NNS
NN or NNS	11	Nor NN nor NNS
RB, RBR, or RBS	VB, VBD, VBN, VBG	anything

58

- \bullet Positive phrases co-occur more with "excellent"
- Negative phrases co-occur more with "poor"
- But how to measure co-occurrence?

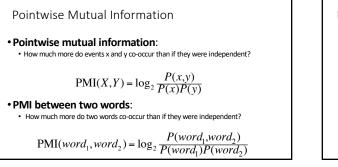

Pointwise Mutual Information

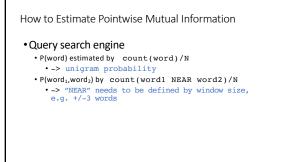

• Pointwise mutual information: • How much more do events x and y co-occur than if they were independent?

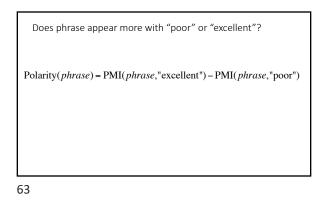

$$PMI(X,Y) = \log_2 \frac{P(x,y)}{P(x)P(x)}$$

$$PMI(X,Y) = \log_2 \frac{P(X,Y)}{P(X)P(Y)}$$

Average		-1.2		

Using WordNet to learn polarity

S.M. Kim and E. Hovy. 2004. Determining the sentiment of opinions. COLING 2004 M. Hu and B. Liu. Mining and summarizing customer reviews. In Proceedings of KDD, 2004

- WordNet: online thesaurus (covered in later lecture).
- Create positive ("good") and negative seed-words ("terrible")
- Find Synonyms and Antonyms
 - Positive Set: Add synonyms of positive words ("well") and antonyms of negative words
 Negative Set: Add synonyms of negative words ("awful") and antonyms of positive words ("evil")
- Repeat, following chains of synonyms
