EECS 498-004: Introduction to Natural Language Processing

Instructor: Prof. Lu Wang
Computer Science and Engineering
University of Michigan

https://web.eecs.umich.edu/~wangluxy/
Asking Questions

Learn from yesterday, live for today, hope for tomorrow.

The important thing is not to stop questioning.

– Albert Einstein

Where is the Louvre Museum located?

Search

About 904,000 results (0.30 seconds)

Best guess for Louvre Museum Location is Paris, France
Mentioned on at least 7 websites including wikipedia.org, answers.com and east-buc.k12.ia.us - Show sources - Feedback

Musée du Louvre - Wikipedia, the free encyclopedia
en.wikipedia.org/wiki/Musée_du_Louvre
Musée du Louvre is located in Paris. Location within Paris. Established, 1793. Location, Palais Royal, Musée du Louvre, 75001 Paris, France. Type, Art museum ... Louvre Palace - List of works in the Louvre - Category:Musée du Louvre
Personal Assistants
Question Answering (Some Background)

One of the oldest NLP tasks (punched card systems in 1961)

Question:

What do worms eat?

Potential Answers:

- Worms eat grass
- Horses with worms eat grass
- Birds eat worms
- Grass is eaten by worms

Simmons, Klein, McConlogue. 1964. Indexing and Dependency Logic for Answering English Questions. American Documentation 15:30, 196-204
Question Answering

One of the oldest NLP tasks (punched card systems in 1961)

Question: What do worms eat?

Potential Answers:

- Worms eat grass
- Horses with worms eat grass
- Birds eat worms
- Grass is eaten by worms
Question Answering

One of the oldest NLP tasks (punched card systems in 1961)

Question: What do worms eat?

Potential Answers:

Worms eat grass

Horses with worms eat grass

Birds eat worms

Grass is eaten by worms

One of the oldest NLP tasks (punched card systems in 1961)
One milestone for Question Answering: IBM’s Watson

• Won Jeopardy on February 16, 2011!

WILLIAM WILKINSON’S “AN ACCOUNT OF THE PRINCIPALITIES OF WALLACHIA AND MOLDOVIA” INSPIRED THIS AUTHOR’S MOST FAMOUS NOVEL

Bram Stoker
Types of Questions in Modern Systems

• Factoid questions
  • Who wrote “The Universal Declaration of Human Rights”?  
  • How many calories are there in two slices of apple pie?  
  • What is the average age of the onset of autism?  
  • Where is Apple Computer based?  

• Complex (narrative) questions:
  • In children with an acute febrile illness, what is the efficacy of acetaminophen in reducing fever?  
  • What do scholars think about Jefferson’s position on dealing with pirates?
Types of Questions in Modern Systems

• Factoid questions
  • Who wrote “The Universal Declaration of Human Rights”?  
  • How many calories are there in two slices of apple pie?  
  • What is the average age of the onset of autism?  
  • Where is Apple Computer based?

• Complex (narrative) questions:
  • In children with an acute febrile illness, what is the efficacy of acetaminophen in reducing fever?  
  • What do scholars think about Jefferson’s position on dealing with pirates?
Commercial systems: mainly factoid questions

Paradigms for Factoid QA

• Information Retrieval (IR)-based approaches
  • IBM Watson (some parts); Google

• Knowledge-based and Hybrid approaches
  • IBM Watson (some other parts); Apple Siri; Wolfram Alpha

• Built upon the above two:
  • Data-driven, neural network-based approaches that rely on retrieval AND knowledge bases
Information Retrieval (IR)-based QA

- Factoid QA pipeline
- Factoid QA evaluation
- Common Knowledge used in QA
- Recent QA tasks
IR-based Factoid QA

Question Processing
- Query Formulation
- Answer Type Detection

Passage Retrieval
- Relevant Docs
- Passage Retrieval
- passages

Document Retrieval

Indexing

Answer Processing

Answer
In the 3rd edition of the textbook, more detailed steps are included.
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • “Who is the president of US?” -> person
  • Formulate queries to send to a search engine
    • “president of United States”

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
Question Processing:
Things to extract from the question

• Answer Type Detection
  • Decide the named entity type (person, place) of the answer

• Query Formulation
  • Choose query keywords for the IR system

• Question Type classification
  • Is this a definition question, a math question, a list question?

• Focus Detection
  • Find the question words that are replaced by the answer

• Relation Extraction (if there are more than one entities)
  • Find relations between entities in the question
They're the two states you could be reentering if you're crossing Florida's northern border. You should answer: what are the states of Georgia and Alabama?

- Answer Type: US state
- Query Formulation: two states, border, Florida, north
- Focus: the two states
- Relations: borders(Florida, ?x, north)
IR-based Factoid QA

• **QUESTION PROCESSING**
  - Detect question type, answer type, focus, relations
    - "Who is the president of US?" -> person
  - Formulate queries to send to a search engine
    - "president of United States"

• **PASSAGE RETRIEVAL**
  - Retrieve ranked documents
  - Break into suitable passages and rerank

• **ANSWER PROCESSING**
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
Answer Type Detection: Named Entities

• *Who founded Virgin Airlines?*
Answer Type Detection: Named Entities

• **Who founded Virgin Airlines?**
  • PERSON

• **What Canadian city has the largest population?**
Answer Type Detection: Named Entities

• *Who founded Virgin Airlines?*
  • PERSON

• *What Canadian city has the largest population?*
  • CITY
Answer Type Taxonomy

Xin Li, Dan Roth. 2002. Learning Question Classifiers. COLING'02

• 6 coarse classes
  • ABBREVIATION, ENTITY, DESCRIPTION, HUMAN, LOCATION, NUMERIC

• 50 finer classes
  • LOCATION: city, country, mountain...
  • HUMAN: group, individual, title, description...
  • ENTITY: animal, body, color, currency...

Answer types in Jeopardy

• 2500 answer types in 20,000 Jeopardy question sample
• The most frequent 200 answer types cover ~ 50% of data
• The 40 most frequent Jeopardy answer types
  country, city, man, film, state, author, group, here, company, president, capital, star, novel, character, woman, river, island, king, song, part, series, sport, singer, actor, play, team, show, actress, animal, presidential, composer, musical, nation, book, title, leader, game
Answer Type Detection

• Hand-written rules
• Machine Learning
Answer Type Detection

• Regular expression-based rules can get some cases:
  • Who {is|was|are|were} PERSON
  • PERSON (YEAR – YEAR)

• Other rules use the question headword: (the headword of the first noun phrase after the wh-word)
  • Which city in China has the largest number of foreign financial companies?
  • What is the state flower of California?
Answer Type Detection

• Most often, we treat the problem as machine learning classification
  • **Define** a taxonomy of question types (similar as answer types)
  • **Annotate** training data for each question type
  • **Train** classifiers for each question class using a rich set of features.
    • *features include those hand-written rules!*
Features for Answer Type Detection

• Question words and phrases
• Part-of-speech tags
• Parse features (headwords)
• Named Entities
• Semantically related words

Which city in China has the largest number of foreign financial companies?
What is the state flower of California?
Query Formulation

- **QUESTION PROCESSING**
  - Detect question type, answer type, focus, relations
    - "Who is the president of US?" -> person
  - Formulate queries to send to a search engine
    - "president of United States"

- **PASSAGE RETRIEVAL**
  - Retrieve ranked documents
  - Break into suitable passages and rerank

- **ANSWER PROCESSING**
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
Keyword Selection Algorithm

1. Select all non-stop words in quotations
2. Select all NNP words in recognized named entities
3. Select all complex nominals with their adjectival modifiers
4. Select all other complex nominals
5. Select all nouns with their adjectival modifiers
6. Select all other nouns
7. Select all verbs
8. Select all adverbs
9. Select the question focus word (skipped in all previous steps)
10. Select all other words
Who coined the term “cyberspace” in his novel “Neuromancer”? 

cyberspace/1 Neuromancer/1 term/4 novel/4 coined/7
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • ”Who is the president of US?” -> person
  • Formulate queries to send to a search engine
    • “president of United States”

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
Passage Retrieval

• Step 1: IR engine retrieves documents using query terms
• Step 2: Segment the documents into shorter units
  • E.g. paragraphs or consecutive sentences
  • *Think about why? Why not single sentences?*
• Step 3: Passage ranking
  • E.g. use *answer type* to help rerank passages
Features for Passage Ranking

Using supervised machine learning

• Number of Named Entities of the right type in passage
• Number of query words in passage
• Number of question N-grams also in passage
• Proximity of query keywords to each other in passage
• Longest sequence of question words
• Rank of the document containing passage
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • "Who is the president of US?" -> person
  • Formulate queries to send to a search engine
    • "president of United States"

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • “Who is the president of US?” -> person
  • Formulate queries to send to a search engine
    • “president of United States”

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
Answer Extraction

• Run an answer-type named-entity tagger on the passages
  • Each answer type requires a named-entity tagger that detects it
  • If answer type is CITY, tagger has to tag CITY
    • Can be full NER, simple regular expressions, or hybrid

• Return the string with the right type:
  • Who is the prime minister of India (PERSON)
    Manmohan Singh, Prime Minister of India, had told left leaders that the deal would not be renegotiated.
  • How tall is Mt. Everest? (LENGTH)
    The official height of Mount Everest is 29035 feet
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • ”Who is the president of US?” → person
  • Formulate queries to send to a search engine
    • “president of United States”

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
Ranking Candidate Answers

• But what if there are multiple candidate answers!

Q: Who was Queen Victoria’s second son?

• Answer Type: Person

Passage:

The Marie biscuit is named after Marie Alexandrovna, the daughter of Czar Alexander II of Russia and wife of Alfred, the second son of Queen Victoria and Prince Albert.
Ranking Candidate Answers

• But what if there are multiple candidate answers!

Q: Who was Queen Victoria’s second son?

• Answer Type: Person

Passage:

The Marie biscuit is named after Marie Alexandrovna, the daughter of Czar Alexander II of Russia and wife of Alfred, the second son of Queen Victoria and Prince Albert.
Use machine learning: Features for ranking candidate answers

**Answer type match**: Candidate contains a phrase with the correct answer type.

**Pattern match**: Regular expression pattern matches the candidate.

**Question keywords**: # of question keywords in the candidate.

**Keyword distance**: Distance in words between the candidate and query keywords.

**Novelty factor**: A word in the candidate is not in the query.

**Apposition features**: The candidate is an appositive to question terms.

**Punctuation location**: The candidate is immediately followed by a comma, period, quotation marks, semicolon, or exclamation mark.

**Sequences of question terms**: The length of the longest sequence of question terms that occurs in the candidate answer.
Candidate Answer scoring in IBM Watson

• Each candidate answer gets scores from >50 components
  • (from unstructured text, semi-structured text, triple stores like knowledge bases)

• logical form (parse) match between question and candidate
• passage source reliability
• geospatial location
  • California is “southwest of Montana”
• temporal relationships
• taxonomic classification
Information Retrieval (IR)-based QA

- Factoid QA pipeline
- Factoid QA evaluation
- Common Knowledge used in QA
- Recent QA tasks
Common Evaluation Metrics

1. **Accuracy** (does answer match gold-labeled answer?)

2. **Mean Reciprocal Rank**
   - For each query return a ranked list of M candidate answers.
   - Query score is $1 / \text{Rank of the first correct answer}$
     - If first answer is correct: 1
     - else if second answer is correct: $\frac{1}{2}$
     - else if third answer is correct: $\frac{1}{3}$, etc.
     - Score is 0 if none of the M answers are correct
   - Take the mean over all N queries
   - Examples

$$MRR = \frac{1}{N} \sum_{i=1}^{N} \frac{1}{rank_i}$$
Information Retrieval (IR)-based QA

• Factoid QA pipeline
• Factoid QA evaluation
• Common Knowledge used in QA
• Recent QA tasks
Knowledge in QA

• What are other types of knowledge useful for a QA system?
  • Relations
  • Temporal information
  • Dialogue context
Relation Extraction

• Answers: Databases of Relations
  • born-in(“Emma Goldman”, “June 27 1869”)
  • author-of(“Cao Xue Qin”, “Dream of the Red Chamber”)
  • Draw from Wikipedia infoboxes, DBpedia, FreeBase, etc.

• Questions: Extracting Relations in Questions
  Whose granddaughter starred in E.T.?
Relation Extraction

• Answers: Databases of Relations
  • born-in(“Emma Goldman”, “June 27 1869”)  
  • author-of(“Cao Xue Qin”, “Dream of the Red Chamber”)  
  • Draw from Wikipedia infoboxes, DBpedia, FreeBase, etc.

• Questions: Extracting Relations in Questions

  Whose granddaughter starred in E.T.?

  (acted-in ?x “E.T.”)

  (granddaughter-of ?x ?y)
Temporal Reasoning

• Relation databases
  • (and obituaries, biographical dictionaries, etc.)

• IBM Watson
  "In 1594 he took a job as a tax collector in Andalusia"

Candidates:
  • Thoreau is a bad answer (born in 1817)
  • Cervantes is possible (was alive in 1594)
Context and Conversation in Virtual Assistants like Siri

• Coreference helps resolve ambiguities
  U: “Book a table at Il Fornaio at 7:00 with my mom”
  U: “Also send her an email reminder”

• Clarification questions:
  U: “Chicago pizza”
  S: “Did you mean pizza restaurants in Chicago or Chicago-style pizza?”
Limitations of Factoid Q/A

• Question must query a specific fact that is explicitly stated somewhere in the document corpus.

• Does not allow aggregating or accumulating information across multiple information sources.

• Does not require “deep compositional” semantics, nor inferential reasoning to generate answer. → Natural language generation!
Information Retrieval (IR)-based QA

• Factoid QA pipeline
• Factoid QA evaluation
• Common Knowledge used in QA
• Recent QA tasks
What are recent tasks for QA?

- Reading comprehension task
- Popular QA benchmarks
- Visual Question Answering (language + vision)
Reading Comprehension

• Answer questions that test comprehension of a specific document.
• Use standardized tests of reading comprehension to evaluate performance (Hirschman et al. 1999; Rilo & Thelen, 2000; Ng et al. 2000; Charniak et al. 2000).
School Kids Clean Up Creek!

(EVERETT, WASHINGTON, June, 1988) – It has taken five years of hard work. But a group of children have cleaned up Pigeon Creek. In 1983, the creek was so dirty that the fish had all died. A group of kids at Jackson School decided to do something about it. It became a project for their whole class.

First they cleaned out the bottom of the creek, called the creek bed. There were many weeds. They also found lot of trash and litter. Then the students raised fish eggs in a tank of water called an aquarium. When the eggs hatched, they emptied the new fish into the creek. They wanted others to stop making the creek dirty. So they made signs that said “Don’t Dump”. They put the signs near the creek. They also made little books, called booklets. The booklets told people how to keep the creek clean. Now, the water is clean and new fish are being born in the creek. Pigeon Creek is a sign of the good things young people can do.

Q1: Who cleaned up the creek? Q2: What was the name of the creek? Q3: When did the work begin? Q4: Where is the bed of a creek? Q5: Why did the kids make booklets?
Large Scale Reading Comprehension Data

• DeepMind’s large-scale data for reading comprehension Q/A (Hermann et al., 2015).
  • News articles used as source documents.
  • Questions constructed automatically from article summary sentences.

Stanford Question Answering Dataset (SQuAD)

• Question: Which team won Super Bowl 50?

• Passage (context): Super Bowl 50 was an American football game to determine the champion of the National Football League (NFL) for the 2015 season. The American Football Conference (AFC) champion Denver Broncos defeated the National Football Conference (NFC) champion Carolina Panthers 24–10 to earn their third Super Bowl title. The game was played on February 7, 2016, at Levi's Stadium in the San Francisco Bay Area at Santa Clara, California.

• 100k examples

• Answer must be a span in the passage
Stanford Question Answering Dataset (SQuAD)

• Question: Which team won Super Bowl 50?

• Passage (context): Super Bowl 50 was an American football game to determine the champion of the National Football League (NFL) for the 2015 season. [The American Football Conference (AFC) champion Denver Broncos defeated the National Football Conference (NFC) champion Carolina Panthers 24–10 to earn their third Super Bowl title.] The game was played on February 7, 2016, at Levi's Stadium in the San Francisco Bay Area at Santa Clara, California.

• How do we know which sentence to select? (HW4)

• Furthermore, which phrase is the answer? (HW4 bonus question)
A Popular LSTM-based QA Model

- LSTM, a recurrent neural net (RNN) model, is used to encode document (or passage) and question into vectors
  - This can be done separately (shared encoder) or jointly (e.g. encode the two in one sequence)

- The answer extractor can be implemented as
  - a similarity measurement (e.g. a cosine scorer)
  - a sequence tagger

- More advanced version can be built with attention mechanism: the model is trained to focus on answering the question while reading the document.
CoQA: A Conversational Question Answering Challenge

• Input: Jessica went to sit in her rocking chair. Today was her birthday and she was turning 80. Her granddaughter Annie was coming over in the afternoon and Jessica was very excited to see her. Her daughter Melanie and Melanie’s husband Josh were coming as well. Jessica had . . .

• Q1: Who had a birthday?
  • A1: Jessica
  • R1 (rational): Jessica went to sit in her rocking chair. Today was her birthday and she was turning 80.

• Q2: How old would she be?
  • A2: 80
  • R2 (rational): she was turning 80

• Q3: Did she plan to have any visitors?
  • A3: Yes
  • R3 (rational): Her granddaughter Annie was coming over
The NarrativeQA Reading Comprehension Challenge

• Title: Ghostbusters II
• Question: How is Oscar related to Dana?
• Answer: her son
• Summary snippet: . . . Peter’s former girlfriend Dana Barrett has had a son, Oscar. . .
• Story snippet:
  • DANA (setting the wheel brakes on the buggy) Thank you, Frank. I’ll get the hang of this eventually.
  • She continues digging in her purse while Frank leans over the buggy and makes funny faces at the baby, OSCAR, a very cute nine-month old boy.
  • FRANK (to the baby) Hiya, Oscar. What do you say, slugger?
  • FRANK (to Dana) That’s a good-looking kid you got there, Ms. Barrett.
Visual Question Answering (VQA)

• Answer natural language questions about information in images.
• VaTech/MSR group has put together VQA dataset with ~750K questions over ~250K images (Antol et al., 2016).
VQA Examples

What color are her eyes?
What is the mustache made of?

How many slices of pizza are there?
Is this a vegetarian pizza?

Is this person expecting company?
What is just under the tree?

Does it appear to be rainy?
Does this person have 20/20 vision?
LSTM System for VQA

“How many horses are in this image?”
