$ \left[\begin{array}{c} \sqrt{\nabla} = ? & \cos \nabla = ? \\ \frac{1}{2\pi} \nabla = ? & \left[\begin{array}{c} 0 \\ 0 \end{array} \right] \nabla = ? \\ \overline{f} \left\{ \nabla \right\} = \frac{1}{\sqrt{2\pi}} \int_{-\infty}^{\infty} f(t) e^{it\nabla} dt = ? \\ M_{\mathcal{Y}} & normal opproach \\ is & useless here. \end{array} \right. $ The Value of Everything & Procedure Practice	 One-Slide Summary In Scheme, expressions evaluate to values. Five evaluation rules describe this process. Lambda means "make a function". A lambda expression specifies the formal parameter and the function body. Evaluating a function application involves evaluating the function, finding its body, replacing the formal parameters with the evaluated actual arguments, and evaluating the result.
<section-header><text><list-item><list-item><list-item><list-item><list-item><table-container></table-container></list-item></list-item></list-item></list-item></list-item></text></section-header>	 Lab and Office Hours Staffed Lab Hours Monday 12:30-13:30 (Small Hall) Monday 14:00-15:00 (Small Hall) Monday 17:00-19:30 (Thornton Stacks) Tuesday 11:00-12:30 (Olsson 001) Wednesday 10:30-13:00 (Thornton Stacks) Thursday 10:00-12:30 (Thornton Stacks) Sunday 13:00-17:00 (Olsson 001) Moritary 13:00-17:00 (Olsson 201)
 How To Use Lab Hours Read the problems on your own and try them out first. You can not just go to a TA and say "I don't get it, what do I do." The TA is allowed to send you away. You must demonstrate about five minutes worth of work: either on scratch paper, or with code you've tried and commented out. For example: how would you do it in English? Talk to your friends. Do not expect to finish the Problem Sets in just the staffed lab time. They take longer. You must do much work alone. 	<text><list-item><list-item></list-item></list-item></text>

 Who Are You? I am a weird frisbee player who likes to learn new things, plays volleyball, enjoys cycling, eats in class, shoots skeet, used to be afraid of computers, loves "Lost", likes trampolines, snowboards, row on the UVA team, like sour candy, is certified for SCUBA, who is looking forward to attending my office hours. CS 150 Gestalt Student, Spring 2010 			 Problem Set 1 Scheme's Evaluation Rules tell you how to find the value of any expression. Questions 1 and 2 ask you to evaluate Scheme expressions in your mind This is a popular exam question. Without Evaluation Rules: guesswork Once you know the Evaluation Rules, you can answer without any guessing!
 Names Evalution Applic Evalution Evalution Evalution If Evalution Evalution 	ives Jate to their Jate to the v ation all sub-expr (a function) da Jates to a fu	Luation Rules ($\frac{-55}{66}$) r pre-defined values ($+ \underline{x} 2$) value associated with that name (square-root 144) ressions. Apply the value of the to the values of the others. (lambda (x) (* x x x)) unction with parameters and body (if (< 3 5) 99 11) f #f, eval second option. the first option.	5 -88 #t #f +
55 -88 #t #f	Primi > > >	tive Examples 5 -88 true (#t) false (#f)	Name Examples (define x 55) (define y 66) X What do these evaluate to?
+	>	primitive addition	y z

Name Examples	Application F What do these evaluate to?
(define x 55) (define y 66)	(sqrt 16) (abs -5) Results of Searching YouTube for my Favourite Song
	(string-length "Hi")
x> 55 y> 66	(+ 1 2) (+ 1 2 3)
Z> reference to undefined identifier: z	(+ 1) Different song by same artist Runescape Music Video that cuts out halfway through the best part The actual song
Application Examples	Liberal Arts Trivia: Antropology
(sqrt 16)> 4(abs -5)> 5(string-length "Hi")> 2 $(+ 1 2)$ > 3 $(+ 1 2 3)$ > 6 $(+ 1)$ > 1	• This American cultural anthropologist is famous for her studies of Samoa and her reports about the purportedly healthy attitude towards sex in South Pacific and Southeast Asian traditional cultures, which influenced the women's liberation movement (e.g., by claiming that females dominated in Chambri and Papau New Guinea without problems). Five years after she died, her work was challenged by Derek Freeman.
Liberal Arts: Slavic Folklore	Lambda
• This witch-like character in Slavic folklore lives in a walking house with chicken feet (but no windows and no doors), flies around on a giant mortar, and kidnaps (presumably to eat) small children. Modest Mussorgsky's <i>Pictures at an</i> <i>Exhibition</i> , a piano suite composed in 1874, features "The Hut on Bird's Legs" as its penultimate movement. #17	 Lambda means "make a function". Consider: cube(x) = x * x * x Scheme-y: cube(x) = (* x x x) Lambda: cube = (lambda (x) (* x x x)) Pure Scheme: (define cube (lambda (x) (* x x x)))

Anatomy Of A Function	Lambda Examples
 (define cube (lambda (x) (* x x x))) formal parameters function body (cube 5) function application actual arguments To evaluate a function application, replace it with the function body, and then replace every formal parameter with its corresponding actual argument. (cube 5) -> (* x x x) -> (* 5 5 5) -> 125 	(define cube (lambda (x) (* x x x))) (define foo (lambda (p q) (+ p q))) (define bar (lambda (a b c) (* a c))) (cube 3) (foo 5 6) (bar 4 5 6) (foo (cube 3) 1)
Lambda Examples	Lambda Lambda Lambda
(define cube (lambda (x) (* x x x))) (define foo (lambda (p q) (+ p q))) (define bar (lambda (a b c) (* a c))) (cube 3) $>$ (* 3 3 3)->27 (foo 5 6) $>$ (+ 5 6) -> 11 (bar 4 5 6) $>$ (* 4 6) -> 24 (foo (cube 3) 1) $>$ > 28	 Consider these two functions: (define cube (lambda (x) (* x x x))) (define cube (lambda (y) (* y y y))) Are they different? Consider: (define nail (lambda (x y) (+ x y))) (define polish (lambda (y x) (/ y x))) (define polish (lambda (y x) (/ y x))) What is: (polish (nail 6 4) 2)
Sally Hansen does Lambda (define nail (lambda (x y) (+ x y))) (define polish (lambda (y x) (/ y x))) (polish (nail 6 4) 2) • This is a call to polish with tricky arguments. • Recall the rule: evaluate the arguments first. • Argument 1: (nail 6 4) -> (+ x y) -> (+ 6 4) -> 10 • Argument 2: 2 -> 2 • Now take polish's body, and replace the formal parameters with the actual arguments: - (/ y x) -> (/ 10 2) -> 5	If Examples (if #t "yes" "no") What do these evaluate to? (if #f "yes" "no") (if (< 3 5) "ant" "bat") (if (< 5 3) "cat" "dog") (if "x" "y" "z") (if (if 11 #f #t) 22 33)

If Examples (if #t "yes" "no") -> "yes" (if #f "yes" "no") -> "no" (if (< 3 5) "ant" "bat") -> "ant" (if (< 5 3) "cat" "dog") -> "dog" (if "x" "y" "z") -> "y" (if (if 11 #f #t) 22 33) -> 33	 Scheme Trickery (100 + 100) Error: The expression in the first position must be a function (or something special like if). 100 is not a function. (if (not "batterie") "fouetté" "plié")) "plié". (not "batterie") returns #f, because "batterie" is not #f. (define (not v) (if v #f #t)) Does (if X #t #f) always equal X ? Yes for #t, #f, (< 3 5), (> 5 6). No for 3, 17, "hello".
<text><text><text></text></text></text>	 Now You Know All of Scheme! Once you understand Eval and Apply, you can understand all Scheme programs! Except: There are many primitives, and you need to know their predefined meaning. There are a few more special forms (like if). We have not define the evaluation rules precisely enough to unambiguously understand all programs (e.g., what does "value associated with a name" mean?).
<section-header><text><text><image/></text></text></section-header>	<pre>brighter? (define brighter? (lambda (color1 color2) (if (> (+ (get-red color1) (get-green color1) (get-blue color1)) (+ (get-red color2) (get-green color2) (get-blue color2)) #t #f))) Is this correct? Maybebut very hard to tell. Your code should appear in a way that reveals its structure</pre>

Liberal Arts Trivia: Physics	Liberal Arts Trivia: Grab Bag
• This 1797 torsion balance experiment, sometimes called "weighing the earth", was the first to measure the force of gravity between masses in the laboratory, and the first to yield accurate values of the gravitational constant and thus the mass of the Earth.	 Q. This series of music video games was produced by Konami in 1998. The series pioneered the rhythm and dance genre in video games. Players stand on a "dance platform" or stage and hit colored arrows laid out in a cross with their feet in time with musical and visual cues.
Liberal Arts Trivia: Drama	What should you do if you can't get your code to work?
• This classical Athenian tragedy by Sophocles, first performed in BC 429, is widely considered a supreme masterpiece of the art of Drama. The Oracle at Delphi tells the protagonist that he is doomed to marry his mother and kill his father. He goes on to do so, but not before solving the riddle of the sphinx: What is the creature that walks on four legs in the morning, two legs at noon, and three in the evening? Name the play <i>and</i> answer the riddle.	 Keep trying: think of alternate approaches Get help from the TAs and your classmates But, if it's too late for that In your submission, explain what doesn't work and as much as you can what you think is right and wrong If you get less than 50% on the automatic adjudication part, the TAs will look over your source and give partial credit.
Evaluation Rules	Primitive Expressions
• A formal review and study guide follows	Expression ::= PrimitiveExpression PrimitiveExpression ::= Number PrimitiveExpression ::= #t #f PrimitiveExpression ::= Primitive Procedure Evaluation Rule 1: Primitive. If the expression is a primitive, it evaluates to its pre-defined value. >+ # <primitive:+></primitive:+>
#41	#42

Name Expressions	Definitions
Expression ::= NameExpression NameExpression ::= Name	Definition ::= (define Name Expression)
Evaluation Rule 2: Name. If the expression is a <i>name</i> , it evaluates to the value associated with that name. > (define two 2) > two 2	Definition Rule. A definition evaluates the Expression, and associates the value of Expression with Name. > (define dumb (+ + +)) +: expects type <number> as 1st argument, given: #<primitive:+>; other arguments were: #<primitive:+> > dumb reference to undefined identifier: dumb</primitive:+></primitive:+></number>
#43	#44
Application Expressions	Rules for Application
Expression ::= ApplicationExpression ApplicationExpression ::= (Expression MoreExpressions) MoreExpressions ::= ε Expression MoreExpressions	• Primitive. If the procedure to apply is a <i>primitive</i> , just do it.
 Evaluation Rule 3: Application. To evaluate an application expression: a. Evaluate all the subexpressions; b. Then, apply the value of the first subexpression to the values of the remaining subexpressions. 	• Constructed Procedure. If the procedure is a <i>constructed (lambda)</i> procedure, evaluate the body of the procedure with each formal parameter replaced by the corresponding actual argument expression value.
#45	#46
Constructing Procedures: Lambda	Applying Constructed Procedures
Expression ::= ProcedureExpression ProcedureExpression ::= (lambda (Parameters) Expression) Parameters ::= ε Name Parameters	Application Rule 2: Constructed Procedure. If the procedure is a constructed (lambda) procedure, evaluate the body of the procedure with each formal parameter replaced by the corresponding actual argument
Evaluation Rule 4: Lambda. Lambda expressions evaluate to a procedure that takes the given <i>Parameters</i> as inputs and has the <i>Expression</i> as its body.	expression value.
#47	#48

Applying Constructed Procedure. If the procedure is a <i>constructed Procedure</i> , evaluate the body of the procedure with each formal parameter replaced by the corresponding actual argument expression value. > ((lambda (n) (+ n 1)) 2)	Evaluation Rule 5: If Expression ::= (if Expression _{Predicate} Expression _{Consequent} Expression _{Alternate}) Evaluation Rule 5: If. To evaluate an if expression: • Evaluate the predicate expressions. • If it evaluates to #f, the value of the if expression is the value of alternate expression. Otherwise, the value of the if
3	expression is the value of consequent expression.
#43 Lambda Example: Tautology Function (lambda make a procedure () with no parameters #t) with body #t > ((lambda () #t) 150) # <procedure>: expects no arguments, given 1: 150 > ((lambda () #t)) #t > ((lambda (x) x) 150) 150</procedure>	#50 Homework (In theory) You now know everything you need for PS1, PS2, PS3 and PS4 Honor Pledge due today (now!)
