## 15F-1 Bookkeeping

- 0 pts Correct

Exercise 5F-2. VCGen Do-While [8 points]. Choose exactly *one* of the two options below. (If you are not certain, pick the first. The answers end up being equivalent, but the first may be easier to grasp for some students and the second easier to grasp for others.)

• Give the (backward) verification condition formula for the command  $do_{Inv}$  c while b with respect to a post-condition P. The invariant Inv is true before each evaluation of the predicate b. Your answer may not be defined in terms of VC(while...).

First, we need to unpack  $do_{Inv}$  c while b. We get the following rule out: c; while  $_{Inv}$  b do c. From there, we can compute the verification condition:

$$\begin{split} VC(c \; ; \; \mathsf{while}_{\mathit{Inv}} \; b \; \mathsf{do} \; c, B) &= VC(c \; , VC(\mathsf{while}_{\mathit{Inv}} \; b \; \mathsf{do} \; c, B)) \\ &= VC(c, \mathit{Inv} \wedge (\forall x_1, ..., x_n. \mathit{Inv} \Rightarrow ((b \Rightarrow VC(c, \mathit{Inv})) \wedge \neg b \Rightarrow B))) \\ &= VC(c, \mathit{Inv}) \wedge (\forall x_1, ..., x_n. \mathit{Inv} \Rightarrow ((b \Rightarrow VC(c, \mathit{Inv})) \wedge \neg b \Rightarrow B)) \end{split}$$

Exercise 5F-3. VCGen Mistakes [20 points]. Consider the following three alternate while Hoare rules (named lannister, stark, and targaryen):

$$\frac{\vdash \{X\} \ c \ \{b \implies X \ \land \ \neg b \implies Y\}}{\vdash \{b \implies X \ \land \ \neg b \implies Y\} \ \text{while} \ b \ \text{do} \ c \ \{Y\}} \ \text{lannister} \qquad \frac{\vdash \{X \ \land \ b\} \ c \ \{X\}}{\vdash \{X\} \ \text{while} \ b \ \text{do} \ c \ \{X\}} \ \text{stark}}$$
 
$$\frac{\vdash \{X\} \ c \ \{X\}}{\vdash \{X\} \ \text{while} \ b \ \text{do} \ c \ \{X \ \land \ \neg b\}} \ \text{targaryen}}$$

All three rules are sound but incomplete. Choose **two** incomplete rules. For each chosen rule provide the following:

- 1. the name of the rule and
- 2. A and
- 3. B and
- 4.  $\sigma$  and
- 5.  $\sigma'$  and
- 6. c such that
- 7.  $\langle c, \sigma \rangle \Downarrow \sigma'$  and
- 8.  $\sigma \models A$  and
- 9.  $\sigma' \models B$  but
- 10. it is not possible to prove  $\vdash \{A\} \ c \ \{B\}$ .

## 2 5F-2 VCGen Do-While

- 0 pts Correct

Exercise 5F-2. VCGen Do-While [8 points]. Choose exactly *one* of the two options below. (If you are not certain, pick the first. The answers end up being equivalent, but the first may be easier to grasp for some students and the second easier to grasp for others.)

• Give the (backward) verification condition formula for the command  $do_{Inv}$  c while b with respect to a post-condition P. The invariant Inv is true before each evaluation of the predicate b. Your answer may not be defined in terms of VC(while...).

First, we need to unpack  $do_{Inv}$  c while b. We get the following rule out: c; while  $_{Inv}$  b do c. From there, we can compute the verification condition:

$$\begin{split} VC(c \; ; \; \mathsf{while}_{\mathit{Inv}} \; b \; \mathsf{do} \; c, B) &= VC(c \; , VC(\mathsf{while}_{\mathit{Inv}} \; b \; \mathsf{do} \; c, B)) \\ &= VC(c, \mathit{Inv} \wedge (\forall x_1, ..., x_n. \mathit{Inv} \Rightarrow ((b \Rightarrow VC(c, \mathit{Inv})) \wedge \neg b \Rightarrow B))) \\ &= VC(c, \mathit{Inv}) \wedge (\forall x_1, ..., x_n. \mathit{Inv} \Rightarrow ((b \Rightarrow VC(c, \mathit{Inv})) \wedge \neg b \Rightarrow B)) \end{split}$$

Exercise 5F-3. VCGen Mistakes [20 points]. Consider the following three alternate while Hoare rules (named lannister, stark, and targaryen):

$$\frac{\vdash \{X\} \ c \ \{b \implies X \ \land \ \neg b \implies Y\}}{\vdash \{b \implies X \ \land \ \neg b \implies Y\} \ \text{while} \ b \ \text{do} \ c \ \{Y\}} \ \text{lannister} \qquad \frac{\vdash \{X \ \land \ b\} \ c \ \{X\}}{\vdash \{X\} \ \text{while} \ b \ \text{do} \ c \ \{X\}} \ \text{stark}}$$
 
$$\frac{\vdash \{X\} \ c \ \{X\}}{\vdash \{X\} \ \text{while} \ b \ \text{do} \ c \ \{X \ \land \ \neg b\}} \ \text{targaryen}}$$

All three rules are sound but incomplete. Choose **two** incomplete rules. For each chosen rule provide the following:

- 1. the name of the rule and
- 2. A and
- 3. B and
- 4.  $\sigma$  and
- 5.  $\sigma'$  and
- 6. c such that
- 7.  $\langle c, \sigma \rangle \Downarrow \sigma'$  and
- 8.  $\sigma \models A$  and
- 9.  $\sigma' \models B$  but
- 10. it is not possible to prove  $\vdash \{A\} \ c \ \{B\}$ .

Flavor text: Incompleteness in an axiomatic semantics or type system is typically not as dire as unsoundness. An incomplete system cannot prove all possible properties or handle all possible programs. Many research results that claim to work for the C language, for example, are actually incomplete because they do not address setjmp/longjmp or bitfields. (Many of them are also unsound because they do not correctly model unsafe casts, pointer arithmetic, or integer overflow.)

We will show that the targaryen and stark rules are incomplete. We start with the targaryen rule:

$$\frac{\vdash \{X\} \ c \ \{X\}}{\vdash \{X\} \ \text{while} \ b \ \text{do} \ c \ \{X \ \land \ \neg b\}} \ \text{targaryen}$$

- 1. Targaryen
- 2. A = x = 1
- 3. B = y = 2
- 4.  $\sigma(x) = 1, \sigma(y) = 1$
- 5.  $\sigma'(x) = 2, \sigma'(y) = 2$  and
- 6. c is while x == 1 do x = x + 1; y = y + 1
- 7.  $\langle c, \sigma \rangle \Downarrow \sigma'$  because the loop only executes once
- 8.  $\sigma \models A$  because 1=1
- 9.  $\sigma' \models B$  because 2=2
- 10. it is not possible to prove  $\vdash \{A\}$  c  $\{B\}$  because A says nothing about y

We continue with the stark rule:

$$\frac{\vdash \{X \ \land \ b\} \ c \ \{X\}}{\vdash \{X\} \ \text{while} \ b \ \text{do} \ c \ \{X\}} \ \text{stark}$$

- 1. Stark
- 2. A = x = 1
- 3. B = x = 2
- 4.  $\sigma(x) = 1$
- 5.  $\sigma'(x) = 2$
- 6. c is while x == 1 do x = x + 1
- 7.  $\langle c, \sigma \rangle \Downarrow \sigma'$  clearly, as the loop will execute once and then terminate
- 8.  $\sigma \models A$  patently, as 1 = 1
- 9.  $\sigma' \models B$  patently, as 2 = 2
- 10. it is not possible to prove  $\vdash \{A\}$  c  $\{B\}$ , as the rule can't prove the postcondition based on the precondition
